Manufacturing Bulletin

Subject: Carrier Tape Pocket Design Change - Reel Shipment

Date: October 13, 2006

Affected Product List: AMB0480A5RJ, AMB0480A5RH

Integrated Device Technology, Inc has introduced a new carrier tape pocket design for AMB product shipped in reel form. Kindly refer to the attachment for the new design which is known as the “dog bone” design. The purpose of this change is to improve the device pick up process at the customer SMT machine. The “dog bone” design provides 4-corner relief to eliminate friction between device corners and the pocket corners during the pick and place at board mount process. This new design has been tested and meets ASTM D5276-98, Standard Test Method for Drop Test of Loaded Containers by Free Fall.

During the transition period, customers may receive shipments in either design type.

Your sincerely
