

GENERAL DESCRIPTION

The 86004-01 is a high performance 1-to-4 LVCMOS/LVTTTL Clock Buffer and a member of the family of High Performance Clock Solutions from IDT. The 86004-01 has a fully integrated PLL and can be configured as zero delay buffer and has an input and output frequency range of 62.5MHz to 250MHz. The external feedback allows the device to achieve “zero delay” between the input clock and the output clocks. The PLL_SEL pin can be used to bypass the PLL for system test and debug purposes. In bypass mode, the reference clock is routed around the PLL and into the internal output divider.

POWER SUPPLY FILTERING TECHNIQUES

As in any high speed analog circuitry, the power supply pins are vulnerable to random noise. To achieve optimum jitter performance, power supply isolation is required. The 86004-01 provides separate power supplies to isolate any high switching noise from the outputs to the internal PLL. V_{DD} , V_{DDA} and V_{DDO} should be individually connected to the power supply plane through vias, and $0.01\mu\text{F}$ bypass capacitors should be used for each pin. *Figure 1* illustrates this for a generic V_{DD} pin and also shows that V_{DDA} requires that an additional 10Ω resistor along with a $10\mu\text{F}$ bypass capacitor be connected to the V_{DDA} pin.

FIGURE 1. POWER SUPPLY FILTERING

RECOMMENDATIONS FOR UNUSED INPUT AND OUTPUT PINS

INPUTS:

LVC MOS CONTROL PINS:

All control pins have internal pullups or pulldowns; additional resistance is not required but can be added for additional protection. A $1\text{k}\Omega$ resistor can be used.

OUTPUTS:

LVC MOS OUTPUTS:

All unused LVC MOS output can be left floating. We recommend that there is no trace attached.

SCHEMATIC EXAMPLE

Figure 2 shows a schematic example of using an 86004-01. It is recommended to have one decouple capacitor per power pin. Each decoupling capacitor should be located as close as

possible to the power pin. The low pass filter R7, C11 and C16 for clean analog supply should also be located as close to the V_{DDA} pin as possible.
