GENERAL DISCLAIMER

Integrated Device Technology, Inc. ("IDT") reserves the right to make changes to its products or specifications at any time, without notice, in order to improve design or performance. IDT does not assume responsibility for use of any circuitry described herein other than the circuitry embodied in an IDT product. Disclosure of the information herein does not convey a license or any other right, by implication or otherwise, in any patent, trademark, or other intellectual property right of IDT. IDT products may contain errata which can affect product performance to a minor or immaterial degree. Current characterized errata will be made available upon request. Items identified herein as "reserved" or "undefined" are reserved for future definition. IDT does not assume responsibility for conflicts or incompatibilities arising from the future definition of such items. IDT products have not been designed, tested, or manufactured for use in, and thus are not warranted for, applications where the failure, malfunction, or any inaccuracy in the application carries a risk of death, serious bodily injury, or damage to tangible property. Code examples provided herein by IDT are for illustrative purposes only and should not be relied upon for developing applications. Any use of such code examples shall be at the user's sole risk.

About this Document

This document describes design notes for the Tsi381.

Revision History

80E2000_DN001_02, Formal, September 2009

This document was rebranded as IDT. It does not include any technical changes.

80E2000_DN001_01, Formal, February 2008

This document contains design note information that used to reside in the *Tsi381 Device Errata*. No new information was introduced in this document.

Design Notes

Design Note	Applicability	
	Tsi381-66IL	Tsi381-66LV
"Redefinition of TEST_SPARE[2] pin"	✓	✓

Redefinition of TEST_SPARE[2] pin

The TEST_SPARE[2] pin has been redefined to provide users with additional flexibility for parking the PCI bus when it is idle. When TEST_SPARE[2] is tied low, the PCI bus arbiter will park the bus on the last master. When TEST_SPARE[2] is tied high or is left as a no connect, the PCI bus arbiter will park the bus on the Tsi381.
