General Description
The HXR8212 Trans-impedance Limiting Amplifier array is a member of IDT’s family of Optical Receiver Transmitter Array (ORTA) products targeted at the parallel optical links market. Together with a PIN detector array or discrete detectors, high-capacity, high-availability optical links can be designed for telecom and datacom applications.

The 3.3V SiGe device integrates the trans-impedance pre-amplifier, the limiting post-amplifier and a versatile CML output stage for four optical channels.

Applications
- Ethernet 100GBASE-SR4 modules
- InfiniBand 300G EDR transceivers
- InfiniBand 300G EDR active cables
- Proprietary multi-channel optical modules

Features
- 60 µApp receiver sensitivity for 10^-12 BER at 28Gbps
- Better than 2.4 mApp overload
- 141mW per channel power consumption
- Adjustable output swing size and pre-emphasis in limiting mode and signal detect threshold
- Independent RSSI
- Optimized for isolated and common cathode photo-detector arrays from multiple vendors
- Control lines accessible on both sides
- QSFP MSA compliance
