

Introduction

This application note provides some basic guidelines when selecting the proper crystal (XTAL) to work with IDT's family of Synchronization WAN-PLLs™ with low jitter, VCXO-based APLLs. A list of recommended XTAL vendors and parts numbers are provided, and have been categorized based on applicable industry standards.

VCXO Overview and Definitions

The VCXO consists of four basic components which can be identified in [Figure 1](#) below.

- The crystal.
- The IC oscillator with internal voltage variable capacitors and internal wiring capacities.
- The stray wiring capacity between the IC oscillator and the crystal, including the pads for the IC, crystal and tuning capacitors.
- Optional discrete tuning capacitors to decrease the VCXO center frequency to match the specified crystal frequency

Figure 1. VCXO Oscillator Circuit

Where

- Vc = Control voltage to change the VCXO frequency.
- Csub = Internal VCXO parasitic wiring capacity to the IC substrate.
- 2*Cv = Varactor Capacity and Csub in parallel on oscillator input and output.
- Ct = Tuning capacitors to center the VCXO center frequency.
- Cs = Stray capacities of crystal and tuning capacitor pads and wiring.

The frequency of a parallel resonant fundamental mode crystal, such as used in IDT VCXOs, is specified by crystal frequency at a specified CL, which is the total loading capacity across the two terminals of the crystal. However the various capacitors associated with the wiring and the IC oscillators are all referenced to ground as seen in the figure below. Conversion of these grounded capacitors to equivalent capacitors across the terminals of the crystal is required to ensure that the sum of all the VCXO capacitors does not exceed the CL of the crystal.

The IC inverter forces the currents flowing in parallel combination of the grounded capacitors on the inverter input to be 180 degrees out of phase with the current flowing in the parallel combination of the grounded capacitors at the inverter output. Since the currents are the same, the input and output capacitances are effectively in series. Using the varactor capacitances as an example, the input and output capacitances are 2*Cv. The series capacity is half that of each grounded capacitor, or Cv and appears equivalently across the crystal terminals. Similarly for the stray and tuning capacitors, Cs and Ct respectively.

Key Crystal Parameters

Frequency Tolerance

Frequency tolerance, also known as calibration accuracy, is the amount of frequency deviation from a specified center frequency at ambient temperature (referenced at 25°C). It is specified in units of parts-per-million (ppm).

Frequency Stability

Frequency stability is the amount of frequency deviation from the ambient temperature frequency over the operating temperature range. This deviation is associated with a set of operating conditions including: Operating Temperature Range, Load Capacitance, and Drive Level.

This parameter is specified with a maximum and minimum frequency deviation, expressed in percent (%) or parts per million (ppm). The frequency stability is determined by the following primary factors: Type of quartz cut and angle of the quartz cut. Some of the secondary factors include: mode of operation, drive level, load capacitance, and mechanical design.

Aging

Aging is the systematic change in frequency with time due to internal changes in the crystal which is related to the crystal contamination and drive level. Over time, particles drop off or fall onto the quartz surface, hence slightly changing the resonant frequency.

Aging is often expressed as a maximum value in parts per million per year [ppm/year]. The rate of aging is typically greatest during the first 30 to 60 days after which time the aging rate decreases. The following factors effect crystal aging: adsorption and desorption of contamination on the surfaces of the quartz, stress relief of the mounting and bonding structures, material outgassing, and seal integrity.

Hold-In

The hold-in, or frequency accuracy, is a measure of the worst-case offset, in parts-per-million (ppm), one can expect from the nominal frequency over a period of time. This specification is the sum of the maximum static system offset plus the dynamic tracking offset forced upon a PLL by output phase slope limiting system requirements when phase transients are present in the PLL input reference.

For GR-253 Core Issue 5, see Figure 5-18 on page 5-78. The worst case MTIE is required to be equal to $(7.6+885*S)nS$ when $S = 0.14$ for an offset of 0.94 ppm. The dynamic offset is rounded up to 1ppm.

For G.813 Option 1 and G.8262 Option 1, see G.6262 Opt 1 Section 11.4.1, EEC-Option 1. The 7.5 ppm requirement is stated explicitly. This sum of the static and dynamic is rounded up to 13ppm.

Specifications	Maximum Clock Frequency Offset (ppm)	Phase Slope Limiting Offset (ppm)	PLL Tracking Offset (ppm)
1. GR-253-Core SONET Minimum Clock 2. SONET/SDH 3. G.813 Option 2	20	0.94	21
1. G.813 Option 1 2. G.8262 Option 1	4.6	7.5	13
1. GR1244-Core 2. GR-253-Core Stratum 3 3. G.812 Type IV 4. G.8262 Option 2	4.6	0.94	6

Pull

Crystals in an HC-49S (low profile) package generally don't have as much pulling range as would a crystal in an HC-49U (high profile) package; crystals in a ceramic package generally have even less. Pullability is usually a function of the size of the termination electrode connected to the crystal blank. A bigger crystal blank, of course, can accommodate a larger electrode. Due to its low profile, an HC-49S crystal has a smaller electrode than an HC-49U, thus a reduced pullability.

Cs Requirement

Of the three components of the VCXO shown in [Figure 1](#) above, only the stray wiring capacity is not guaranteed by a component vendor. A maximum stray wiring capacity that appears in parallel with the crystal terminals is specified in [Table 1](#) below. This is the series equivalent capacity of Cs1 and Cs2 as shown in [Figure 1](#).

This maximum capacity will guarantee that the pull range of the VCXO will be symmetric about the nominal center frequency under the condition of the CL and Cv capacities specified in [Table 1](#). It is the responsibility of the board designer to ensure that this maximum is not exceeded. It is preferable that the wiring capacity is less than the maximum, allowing tuning caps to be installed to make a fine adjustment of the VCXO center frequency.

Table 1: WAN-PLL VCXO-based APLL Capacitance Requirements

Symbol	Parameter	Typical (pF)	Max (pF)
Cs	Equivalent Parallel Stray capacity		1.9
CL	Crystal Parallel Load Capacity at the nominal center frequency	10	
CV_LOW	Low Varactor Capacitance	5.4	
CV_HIGH	High Varactor Capacitance	12.7	

CL = 10pF is set for the best match between the varactor capacities and stray capacitances achievable on a printed wiring board. The maximum stray capacitance requirement is determined by the crystal load curve. The interested reader is pointed to IDT [AN-841](#) for the stray capacity limit and to [AN-831](#) for the crystal load curve.

Determination of VCXO Margin Against the Application APR

The application's Absolute Pull Range requirement (APR), is the guaranteed pull range of the VCXO after all crystal tolerances have been accounted for. The accounting begins with the pull range of a properly tuned VCXO and subtracts all the known tolerances as well as the application APR. The remainder is the Margin against APR and must be greater than zero.

Example: Calculating a VCXO's APR Margin Budget

[Table 2](#) shows an example of an HC49S crystal electrical specification. Most manufacturers have similar values and variables. For such a crystal and a VCXO with the capacities shown in [Table 1](#) above, the pull range of the VCXO is ± 120 ppm. Since all tolerances and APR are symmetric, it suffices to use only positive values.

Table 2: Example of an HC49S Crystal Electrical Specification

Symbol	Parameter	Test Conditions	Minimum	Typical	Maximum	Units
	Mode of Oscillation		Fundamental			
f_N	Frequency			25		MHz
f_T	Frequency Tolerance	@ 25°C			± 20	ppm
f_S	Frequency Stability	-40°C to +85°C			± 20	ppm
	Operating Temperature Range		-40		85	°C
C_L	Load Capacitance			10		pF
C_O	Shunt Capacitance			3.3		pF
C_1	Motional Capacitance			12.7		fF
ESR	Equivalent Series Resistance				40	Ω
	Drive Level			100	200	μW
	Aging @ 25°C				± 5 over 1 year ± 20 over 20 years	ppm

Using the crystal tolerances from the HC49S crystal above in [Table 2](#), the margin against APR is calculated as shown in [Table 3](#) and [Table 4](#) below.

Table 3: HC49S Margin Against APR

	SynchE	SONET/SDH	Units
VCXO Pull Range	120	120	ppm
Crystal Tolerance	-20	-20	ppm
Crystal Stability	-20	-20	ppm
Aging (20 yrs)	-20	-20	ppm
APR	-13	-21	ppm
Margin	47	39	ppm

In the same manner, the margin against APR can be calculated for a 5032 crystal with the same capacities as [Table 1](#), but with $C_0 = 2.2\text{pF}$ and $C_1 = 8.4\text{fF}$. The pull range is ± 95 ppm.

Table 4: 5032 Margin Against APR

	SynchE	SONET/SDH	Units
VCXO Pull Range	95	95	ppm
Crystal Tolerance	-20	-20	ppm
Crystal Stability	-20	-20	ppm
Aging (20 yrs)	-20	-20	ppm
APR	-13	-21	ppm
Margin	22	14	ppm

XTAL Layout Considerations

The objective is to avoid adding any noise to the clock between the crystal and XTALn_IN/OUT pins. Below are some guidelines when co-locating the crystal with the PLL.

1. Place tuning capacitors symmetrically across the crystal terminals. Connect the ground terminals together and tie with a single via to the IC ground. See [Figure 1](#) for schematic representation.
2. Keep the crystal bond pads and trace width to the XTALn_IN/OUT pins as small as possible. Routing should be done on top layer with no vias.
3. Clocks and frequently switched signals should not be routed close to the crystals.
4. Digital signals should not be routed directly under the crystal or XTALn_IN/OUT pins.
5. All metal layers in the PCB are recommended to be removed under the XTALn_OUT ball, crystal pad and associated trace.
6. It is recommended to protect crystal traces with ground traces and guard rings.

For ceramic packages, provide an option for load tuning capacitors, in case fine tuning is needed or for centering the nominal frequency.

Example Crystal Layouts

Target Standards and Recommended Crystals

This following tables categorize recommended crystal vendors and parts numbers based on applicable industry standards. This is not meant to be an exhaustive list, but does highlight parts that have proven to be suitable with IDT's synchronization WAN-PLLs in meeting applicable industry standards.

GR-253-Core SONET Minimum Clock / G.813 Option 2 / SONET/SDH Line Card

Frequency Accuracy/Hold-In (20 years¹): ±21ppm

XTAL Vendor	Part Order Number (XTAL Family)	Pkg	Temperature Range	Notes
24.8832 MHz (SONET)				
Fox (www.foxonline.com)	278LF-24.8832-3 (HC49SDLF)	HC-49S SMD	-40°C to +85°C	1
25 MHz (ETH)				
Fox (www.foxonline.com)	278LF-25-336 (HC49SDLF)	HC-49S SMD	-40°C to +85°C	1
25.78125 MHz (ETH LAN)				
Fox (www.foxonline.com)	278LF-25.78125-1 (HC49SDLF)	HC-49S SMD	-40°C to +85°C	1

1. Tested in the lab by IDT

G.813 Option 1 / G.8262 Option 1 / SyncE Line Card

Frequency Accuracy/Hold-In (1 year): ± 13 ppm

XTAL Vendor	Part Order Number (XTAL Family)	Pkg	Temperature Range	Notes
NOTE: All XTALs listed in previous table(s) are also suitable.				
24.8832 MHz (SONET)				
Fox (www.foxonline.com)	495-24.8832-2 (FX532B)	5032 SMD	-40°C to +85°C	
MtronPTI (www.mtronpti.com)	M1325S141 (M1325)	5032 SMD	-40°C to +85°C	1
Rakon (www.rakon.com)	513810 (IFF10RSX-5)	5032 SMD	-40°C to +85°C	
25 MHz (ETH)				
Fox (www.foxonline.com)	495-25-141 (FX532B)	5032 SMD	-40°C to +85°C	
MtronPTI (www.mtronpti.com)	M1325S139 (M1325)	5032 SMD	-40°C to +85°C	
Rakon (www.rakon.com)	512839 (IFF10RSX-5)	5032 SMD	-40°C to +85°C	1
25.78125 MHz (ETH LAN)				
Fox (www.foxonline.com)	495-25.78125-2 (FX532B)	5032 SMD	-40°C to +85°C	
MtronPTI (www.mtronpti.com)	M1325S142 (M1325)	5032 SMD	-40°C to +85°C	1
Rakon (www.rakon.com)	513805 (IFF10RSX-5)	5032 SMD	-40°C to +85°C	
24.576 MHz (CPRI)				
Rakon (www.rakon.com)	513809 (IFF10RSX-5)	5032 SMD	-40°C to +85°C	
1. Tested in the lab by IDT				

GR1244-Core / GR-253-Core Stratum 3 / G.812 Type IV / G.8262 Option 2

Frequency Accuracy/Hold-In (20 years²): ± 6 ppm

XTAL Vendor	Part Order Number (XTAL Family)	Pkg	Temperature Range	Notes
NOTE: All XTALs listed in previous table(s) are also suitable.				

2. Per Telcordia GR-1244-CORE; ITU-T specifies 1 year

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
