

Description

The ICS527-03 is the most flexible way to generate an output clock from an input clock with zero skew. The user can easily configure the device to produce nearly any output clock that is multiplied or divided from the input clock. The part supports non-integer multiplications and divisions. Using Phase-Locked Loop (PLL) techniques, the device accepts an input clock up to 200 MHz and produces an output clock up to 160 MHz.

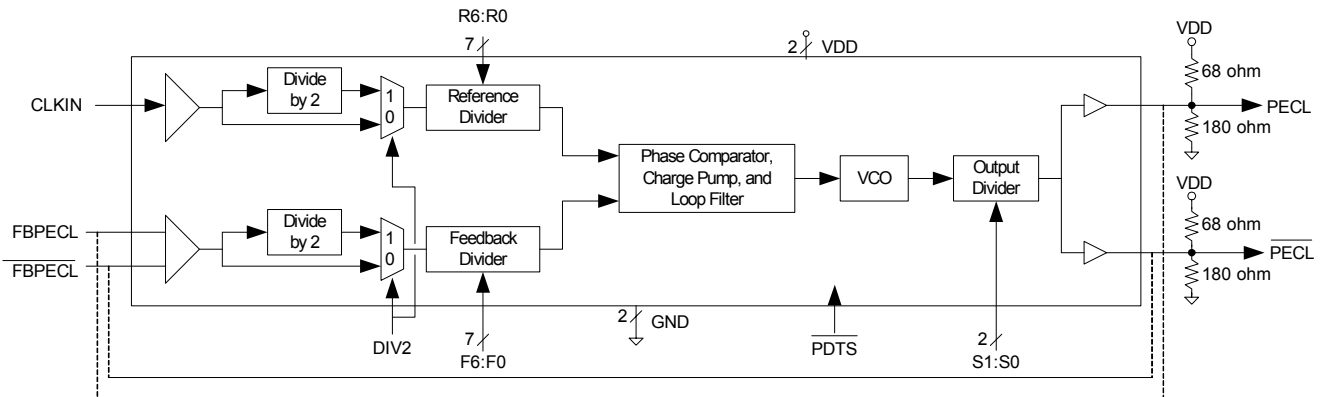

The ICS527-03 aligns rising edges on CLKIN with FBPECL at a ratio determined by the reference and feedback dividers.

For a PECL input and output clock with zero delay, use the ICS527-04.

Features

- Packaged as 28 pin SSOP, Pb free (150 mil body)
- Synchronizes fractional clocks rising edges
- CMOS in to PECL out
- Pin selectable dividers
- Zero input to output skew
- User determines the output frequency - no software needed
- Slices frequency or period
- Input clock frequency of 1.5 MHz to 200 MHz
- Output clock frequencies from 2.5 MHz to 160 MHz
- Very low jitter
- Duty cycle of 45/55
- Operating voltage of 3.3 V
- Advanced, low power CMOS process

Block Diagram

Pin Assignment

Output Frequency and Output Divider Table

S1	S0	Output Divider	Output Frequency (MHz)
0	0	2	10 - 80
0	1	4	5 - 40
1	0	8	2.5 - 20
1	1	1	20 -160

Pin Descriptions

Pin Number	Pin Name	Pin Type	Pin Description
1,2, 24-28	R5, R6, R0-R4	Input	Reference divider word input pins determined by user. Forms a binary number from 0 to 127. Internal pull-up.
3	DIV2	Input	Selects CLK2 function to output a SYNC signal or a divide by 2 of CLK1 based on the table above. Internal pull-up.
4, 5	S0, S1	Input	Select pins for output divider determined by user. See table above. Internal pull-up.
6, 23	VDD	Power	Connect to +3.3 V.
7	FPECL	Input	PECL feedback input.
8	$\overline{\text{FPECL}}$	Input	Complementary PECL feedback input.
9, 20	GND	Power	Connect to ground
10	CLKIN	Input	Clock input.
11	$\overline{\text{PDT S}}$	Input	Power Down. Active low. Turns off entire chip when low, both clock outputs are tri-stated. Internal pull-up.
12-18	F0-F6	Input	Feedback divider word input pins determined by user. Forms a binary number from 0 to 127. Internal pull-up
19	RES	BIAS	Resistor connection to VDD for setting level of PECL outputs.
21	$\overline{\text{PECL}}$	Output	Complementary PECL input clock.
22	PECL	Output	PECL input clock.

External Components

Decoupling Capacitors

As with any high performance mixed-signal IC, the ICS527-03 must be isolated from system power supply noise to perform optimally.

Decoupling capacitors of 0.01 μ F must be connected between each VDD and the PCB ground plane. They must be connected close to the device to minimize lead inductance.

Series Termination Resistor

Clock output traces over one inch should use series termination. To series terminate a 50 Ω trace (a commonly used trace impedance), place a 33 Ω resistor in series with the clock line, as close to the clock output pin as possible. The nominal impedance of the clock output is 20 Ω .

Determining (setting) the ICS527-03 Dividers

The user has full control in setting the desired output clock over the range shown in the table on page 2. The user should connect the divider select input pins directly to ground (or VDD, although this is not required because of internal pull-ups) during Printed Circuit Board layout, so the ICS527-03 automatically produces the correct clock when all components are soldered. It is also possible to connect the inputs to parallel I/O ports in order to switch frequencies.

The output of the ICS527-03 can be determined by the following simple equation:

$$\text{FB Frequency} = \text{Input Frequency} \times \frac{\text{FDW} + 2}{\text{RDW} + 2}$$

Where:

Reference Divider Word (RDW) = 0 to 127
 Feedback Divider Word (FDW) = 0 to 127
 FB Frequency is the same as either CLK1 or CLK2 depending on feedback connection

Also, the following operating ranges should be observed:

$$300\text{kHz} < \frac{\text{Input Frequency}}{\text{RDW} + 2} < 20 \text{ MHz}$$

The output divide should be selected depending on the frequency of CLK1. The table on page 2 gives the ranges.

The dividers are expressed as integers. For example, if a 50 MHz output on CLK1 is desired from a 40 MHz input, the reference divider word (RDW) should be 2 and the feedback divider word (FDW) should be 3 which gives the required 5/4 multiplication. If multiple choices of dividers are available, then the lowest numbers should be used. In this example, the output divide (OD) should be selected to be 2. Then R6:R0 is 0000010, F6:F0 is 0000011 and S1:S0 is 00. Also, this example assumes CLK1 is connected to FBIN.

If you need assistance determining the optimum divider settings, please send an e-mail to ics-mk@icst.com with the desired input clock and the desired output frequency.

Typical Example

The following connection diagram shows the implementation of the example from the previous section. This will generate a 50 MHz clock synchronously with a 40 MHz input. The layout diagram below will produce the waveforms shown on the right.

Note: The series termination resistor is located before the feedback

PCB Layout Recommendations

For optimum device performance and lowest output phase noise, the following guidelines should be observed.

- 1) Each 0.01 μ F decoupling capacitor should be mounted on the component side of the board as close to the VDD pin as possible. No via's should be used between decoupling capacitor and VDD pin. The PCB trace to VDD pin should be kept as short as possible, as should the PCB trace to the ground via.
- 2) PECL termination networks should be located as close to the outputs as possible.
- 3) An optimum layout is one with all components on the same side of the board, minimizing vias through other signal layers. Other signal traces should be routed away from the ICS527-03. This includes signal traces just underneath the device, or on layers adjacent to the ground plane layer used by the device.

Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the ICS527-03. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

Item	Rating
Supply Voltage, VDD	7V
All Inputs and Outputs	-0.5V to VDD+0.5V
Ambient Operating Temperature	0 to +70° C
Storage Temperature	-65 to +150° C
Junction Temperature	175° C
Soldering Temperature	260° C

Recommended Operation Conditions

Parameter	Min.	Typ.	Max.	Units
Ambient Operating Temperature, ICS527R-02	0		+70	° C
Ambient Operating Temperature, ICS527R-02I	0		+70	° C
Power Supply Voltage (measured in respect to GND)	+3.15	+3.3	+3.45	V

DC Electrical Characteristics

Unless stated otherwise, VDD = 3.3V ±5%, Ambient Temperature 0 to +70° C

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Units
Operating Voltage	VDD		3.15	3.3	3.45	V
Supply Current	IDD	15 MHz in, 60MHz out, no load		15		mA
Supply Current, Power Down	IDDPD	$\overline{PDT\overline{S}}=0$		20		μA
Input High Voltage	V _{IH}		2			V
Input Low Voltage	V _{IL}				0.8	V
Input High Voltage, PECLIN and FBIN	V _{IH}		VDD/2+1			V
Input Low Voltage, PECLIN and FBIN	V _{IL}				VDD/2-1	V
Output High Voltage	V _{OH}	I _{OH} = -12 mA	2.4			V
Output Low Voltage	V _{OL}	I _{OL} = 12 mA			0.4	V

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Units
Input Capacitance, except PECLIN and FBIN	C_{IN}			5		pF
Short Circuit Current	I_{OS}			± 70		mA
On-chip pull-up resistor	R_{PU}			270		k Ω

AC Electrical Characteristics

Unless stated otherwise, VDD = 3.3V $\pm 5\%$, Ambient Temperature 0 to +70°C

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Units
Input Frequency	F_{IN}		1.5		200	MHz
Output Frequency, CLK1	F_{OUT}	0 to +70°C	2.5		160	MHz
		-40 to +85°C	4		140	MHz
Output Rise Time	t_{OR}	0.8 to 2.0V, $C_L=15\text{pF}$		1		ns
Output Fall Time	t_{OF}	2.0 to 0.8V, $C_L=15\text{pF}$		1		ns
Output Duty Cycle (% high time)	t_{OD}	Measured at VDD/2, $C_L=15\text{pF}$	45	50	55	%
Power Down Time, $\overline{PDT\overline{S}}$ low to clocks tri-stated					50	ns
Power Up ime, $\overline{PDT\overline{S}}$ high to clocks stable					10	ms
Absolute Clock Period Jitter	t_{ja}	Deviation from mean		± 90		ps
One sigma Clock Period Jitter	t_{js}			40		ps
Input to output skew	t_{IO}	PECLIN to CLK1, Note 1	-250		250	ps
Device to device skew	t_{pi}	Common PECLIN, measured at FBIN		0	500	ps

Note 1: Assumes clocks with same rise time, measured from rising edges at VDD/2.

Package Outline and Package Dimensions (28 pin SSOP, 150 mil Body, 0.025 mm Pitch)

Package dimensions are kept current with JEDEC Publication No. 95, MO-153

Ordering Information

Part / Order Number	Marking	Shipping packaging	Package	Temperature
527R-03LF	527R-03LF	Tubes	28 pin SSOP	0 to +70°C
527R-03LFT	527R-03LF	Tape and Reel	28 pin SSOP	0 to +70°C

“LF” denotes Pb free packaging, RoHS compliant

While the information presented herein has been checked for both accuracy and reliability, Integrated Device Technology (IDT) assumes no responsibility for either its use or for the infringement of any patents or other rights of third parties, which would result from its use. No other circuits, patents, or licenses are implied. This product is intended for use in normal commercial applications. Any other applications such as those requiring extended temperature range, high reliability, or other extraordinary environmental requirements are not recommended without additional processing by IDT. IDT reserves the right to change any circuitry or specifications without notice. IDT does not authorize or warrant any IDT product for use in life support devices or critical medical instruments

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
