

## Description

The ICS552A-01 produces 8 low-skew copies of the multiple input clock or fundamental, parallel-mode crystal. Unlike other clock drivers, these parts do not require a separate oscillator for the input. Using IDT's patented Phase-Locked Loop (PLL) to multiply the input frequency, it is ideal for generating and distributing multiple high-frequency clocks. **This is a single chip used for 3 different applications:**

- 1) ICS552A-01 (A mode) — an Oscillator multiplier
- 2) ICS552A-01 (B mode) — a Dual 1:4 buffer
- 3) ICS552A-01 (C mode) — a 1:8 Oscillator buffer

## Features (all)

- Packaged as 20-pin SSOP (QSOP)
- Pb-free packaging available
- Operating voltages of 3.0 V to 5.5 V
- Industrial temperature available

## Features (specific)

### ICS552A-01 (for A mode)

- Contains on-chip multiplier with selections of x1, x1.33, x2, x2.66, x3, x3.33, x4, x4.66, x5, and x6

## Block Diagram (ICS552A-01—A mode)

- Power-down and Tri-state modes

### ICS552A-01 (for B mode)

- Up to 200 MHz clock input/output at 3.3 V
- Low skew of 250 ps maximum for any bank of four
- Inputs can be connected together for a 1 to 8 buffer with 250 ps skew between any outputs
- Non-inverting buffer mode
- Ideal for clock networks
- Output Enable mode tri-states outputs
- Full CMOS output swing with 25 mA output drive capability at TTL levels
- Advanced, low power, sub-micron CMOS process

### ICS552A-01 (for C mode)

- Use with 25 MHz crystal for networking
- Use with 27 MHz crystal for MPEG

### ICS552A-01 (for A and C modes)

- Input frequency of 10.0 to 27.0 MHz
- Provides 8 low-skew outputs (<250 ps)
- Output clock duty cycle of 40/60 at 3.3 V

## Pin Assignment (ICS552A-01—A mode)

## Multiplier Select Table

S3	S2	S1	S0	Multiplier
0	0	0	0	Power Down
0	0	0	1	x1
0	0	1	0	x1.333
0	0	1	1	x2
0	1	0	0	x2.666
0	1	0	1	x3
0	1	1	0	x3.333
0	1	1	1	x4
1	0	0	0	x5
1	0	0	1	x4.66
1	0	1	0	x6
1	1	0	1	Tri-state all

## Pin Descriptions (ICS552A-01—A mode)

Pin Number	Pin Name	Pin Type	Pin Description
1	DC	—	Do not connect.
2	X2	XO	Crystal connection. Connect to a 10 - 27 MHz fundamental mode crystal.
3	X1/ICLK	XI	Crystal connection. Connect to a 10 - 27 MHz fundamental mode crystal or clock.
4	VDD	Power	Connect to +3.3 V or 5 V. Decouple with pin 6. Must be same as other VDDs.
5	S2	Input	Multiplier Select pin 2 per table above.
6	GND	Power	Connect to ground.
7	CLK1	Output	Output clock 1.
8	CLK2	Output	Output clock 2.
9	CLK3	Output	Output clock 3.
10	CLK4	Output	Output clock 4.
11	S1	Input	Multiplier Select pin 1 per table above
12	CLK5	Output	Output clock 5.
13	CLK6	Output	Output clock 6.
14	GND	Power	Connect to ground.
15	S3	Input	Multiplier Select pin 3 per table above
16	VDD	Power	Connect to +3.3 V or 5 V. Decouple with pin 14. Must be same as other VDDs.
17	CLK7	Output	Output clock 7.
18	CLK8	Output	Output clock 8.
19	DC	—	Do not connect.
20	S0	Input	Multiplier Select pin 0 per table above

## Block Diagram (ICS552A-01—B mode)

## Pin Assignment (ICS552A-01—B mode)

20-pin (150 mil) SSOP (QSOP)

## Clock Output Select Table (ICS552A-01—B mode)

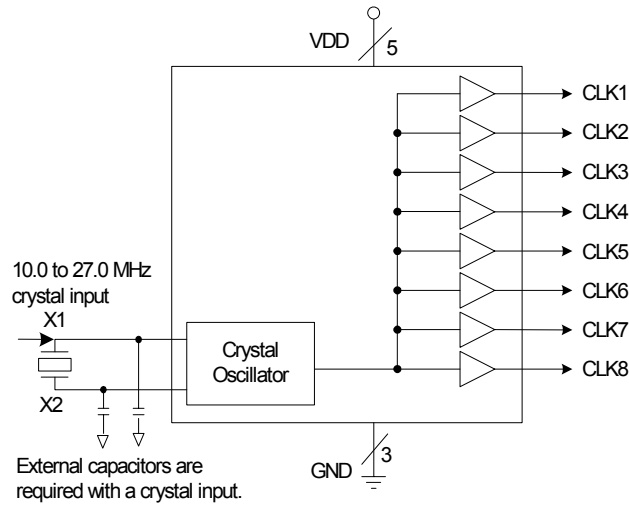

S1	S0	Mode
0	0	QA1:4 and QB1:4 running
0	1	Test mode
1	0	OE. All outputs in high impedance
1	1	QA1:4 only. QB1:4 stopped low

## Pin Descriptions (ICS552A-01—B mode)

Pin Number	Pin Name	Pin Type	Pin Description
1	INA	CI	Input to buffer A. Outputs QA1:4 will be the same frequency. Internal pull-up resistor.
2	DC	—	Do not connect.
3	DC	—	Do not connect.
4	VDD	Power	Connect to +3.3 V or 5.0 V. Must be same as other VDDs.
5	VDD	Power	Connect to +3.3 V or 5.0 V. Must be same as other VDDs.
6	GND	Power	Connect to ground.
7	QA1	Output	Output 1 from buffer A.
8	QA2	Output	Output 2 from buffer A.
9	QA3	Output	Output 3 from buffer A.
10	QA4	Output	Output 4 from buffer A.
11	S1	I	Mode Select pin 1. Selects mode for outputs. Must be at GND for all clocks on. Internal pull-up resistor.
12	QB1	Output	Output 1 from buffer B.
13	QB2	Output	Output 2 from buffer B.
14	GND	Power	Connect to ground.
15	VDD	Power	Connect to +3.3 V or 5.0 V. Must be same as other VDDs.
16	VDD	Power	Connect to +3.3 V or 5.0 V. Must be same as other VDDs.
17	QB3	Output	Output 3 from buffer B.
18	QB4	Output	Output 4 from buffer B.
19	INB	CI	Input to buffer B. Outputs QA1:4 will be the same frequency. Internal pull-up resistor.
20	S0	I	Mode Select pin 0. Selects mode for outputs. Must be at GND for all clocks on. Internal pull-up resistor.

KEY: CI = clock input with pull-up resistor; I = input with internal pull-up resistor.

### Pin Assignment (ICS552A-01—C mode)

## Pin Descriptions (ICS552A-01—C mode)

Pin Number	Pin Name	Pin Type	Pin Description
1	DC	—	Do not connect.
2	X2	XO	Crystal connection. Connect to a 10 - 27 MHz fundamental mode crystal.
3	X1	XI	Crystal connection. Connect to a 10 - 27 MHz fundamental mode crystal.
4	VDD	Power	Connect to +3.3 V or 5 V. Decouple with pin 6. Must be same as other VDDs.
5	GND	Power	Connect to ground.
6	GND	Power	Connect to ground.
7	CLK1	Output	Output clock 1.
8	CLK2	Output	Output clock 2.
9	CLK3	Output	Output clock 3.
10	CLK4	Output	Output clock 4.
11	VDD	Power	Connect to +3.3 V or 5 V. Must be same as other VDDs.
12	CLK5	Output	Output clock 5.
13	CLK6	Output	Output clock 6.
14	GND	Power	Connect to ground.
15	VDD	Power	Connect to +3.3 V or 5 V. Must be same as other VDDs.
16	VDD	Power	Connect to +3.3 V or 5 V. Decouple with pin 14. Must be same as other VDDs.
17	CLK7	Output	Output clock 7.
18	CLK8	Output	Output clock 8.
19	DC	—	Do not connect.
20	VDD	Power	Connect to +3.3 V or 5 V. Must be same as other VDDs.

## External Components

### Series Termination Resistor

Clock output traces over one inch should use series termination. To series terminate a 50Ω trace (a commonly used trace impedance), place a 33Ω resistor in series with the clock line, as close to the clock output pin as possible. The nominal impedance of the clock output is 20Ω.

### Decoupling Capacitors

As with any high-performance mixed-signal IC, the ICS552A-01 must be isolated from system power supply noise to perform optimally.

Decoupling capacitors of 0.01μF must be connected between each VDD and GND on pins 4 and 6, and 16 and 14. Other VDDs and GNDs can be connected to these pins or directly to their respective ground planes.

### Crystal Load Capacitors

The device crystal connections should include pads for small capacitors from X1 to ground and from X2 to ground. These capacitors are used to adjust the stray capacitance of the board to match the nominally required crystal load capacitance. Because load capacitance can only be increased in this trimming process, it is important to keep stray capacitance to a minimum by using very short PCB traces (and no vias) between the crystal and device. Crystal capacitors must be connected from each of the pins X1 and X2 to ground.

The value (in pF) of these crystal caps should equal  $(C_L - 12 \text{ pF}) * 2$ . In this equation,  $C_L$  = crystal load capacitance in pF. Example: For a crystal with a 18 pF load capacitance, two 12 pF capacitors should be used. For a clock input, connect it X1/ICLK and leave X2 unconnected (floating).

## PCB Layout Recommendations

For optimum device performance and lowest output phase noise, the following guidelines should be observed.

- 1) Each 0.01μF decoupling capacitor should be mounted on the component side of the board as close to the VDD pin as possible. No vias should be used between decoupling capacitor and VDD pin. The PCB trace to VDD pin should be kept as short as possible, as should the PCB trace to the ground via.
- 2) The external crystal should be mounted just next to the device with short traces. The X1 and X2 traces should not be routed next to each other with minimum spaces, instead they should be separated and away from other traces.
- 3) To minimize EMI, the 33Ω series termination resistor (if needed) should be placed close to the clock output.
- 4) An optimum layout is one with all components on the same side of the board, minimizing vias through other signal layers.

## Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the ICS552A-01. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

Parameter	Condition	Min.	Typ.	Max.	Units
Supply Voltage, VDD	Referenced to GND			7	V
Inputs	Referenced to GND	-0.5		VDD+0.5	V
Clock Outputs	Referenced to GND	-0.5		VDD+0.5	V
Storage Temperature		-65		150	°C
Soldering Temperature	Max 10 seconds			260	°C
Junction Temperature				125	°C

## Recommended Operation Conditions

Parameter	Min.	Typ.	Max.	Units
Ambient Operating Temperature (commercial)	0		+70	°C
Ambient Operating Temperature (industrial)	-40		+85	°C

## DC Electrical Characteristics

Unless stated otherwise, VDD = 3.3 V or 5 V, Ambient Temperature -40 to +85°C

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Units
Operating Voltage	VDD		3.0		5.5	V
Input High Voltage	V <sub>IH</sub>	ICLK	VDD/2+1	VDD/2		V
Input Low Voltage	V <sub>IL</sub>	ICLK		VDD/2	VDD/2-1	V
Input High Voltage	V <sub>IH</sub>	S3:S0	2			V
Input Low Voltage	V <sub>IL</sub>	S3:S0			0.8	V
Output High Voltage	V <sub>OH</sub>	VDD = 3.3 V, I <sub>OH</sub> = -8 mA	2.4			V
Output Low Voltage	V <sub>OL</sub>	VDD = 3.3 V, I <sub>OL</sub> = 8 mA			0.4	V
Output High Voltage	V <sub>OH</sub>	VDD = 3.3 V or 5 V, I <sub>OH</sub> = -8 mA	VDD-0.4			V
Short Circuit Current	I <sub>OS</sub>	VDD = 3.3 V, each output		±50		mA

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Units
Operating Supply Current	$I_{DD}$	at 3.3 V, no load, 25 MHz in, x4		35		mA
Operating Supply Current	$I_{DD}$	at 5 V, no load, 25 MHz in, x4		59		mA
Power-down Supply Current	$I_{DD}$	S3:S0 = 0 (GND)		55		$\mu$ A

## AC Electrical Characteristics

Unless stated otherwise, VDD = 3.3 V or 5 V, Ambient Temperature -40 to +85° C

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Units
Input Frequency	$F_{IN}$	Fundamental crystal	10		27	MHz
		Input clock–non-buffer mode	10		27	MHz
		Input clock–buffer mode only	10		200	MHz
Output Rise Time	$t_{OR}$	0.8 to 2.0 V			1.5	ns
Output Fall Time	$t_{OF}$	2.0 to 0.8 V			1.5	ns
Duty Cycle		at VDD/2	40	50	60	%
Output-to-Output Skew		All modes, Rising edges at VDD/2			250	ps
Absolute Jitter		Mode A, Deviation from Mean		$\pm 75$		ps
One Sigma Clock Period Jitter		Mode A		25		ps

## Thermal Characteristics

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Units
Thermal Resistance Junction to Ambient	$\theta_{JA}$	Still air		135		°C/W
	$\theta_{JA}$	1 m/s air flow		93		°C/W
	$\theta_{JA}$	3 m/s air flow		78		°C/W
Thermal Resistance Junction to Case	$\theta_{JC}$			60		°C/W

## Package Outline and Package Dimensions (20-pin SSOP, 150 Mil. Wide Body)

Package dimensions are kept current with JEDEC Publication No. 95

## Ordering Information

Part / Order Number	Marking	Shipping Packaging	Package	Temperature
552AR-01LF	552AR-01LF	Tubes	20-pin SSOP	0 to +70° C

552ARI-01LFT	552ARI01LF	Tape and Reel	20-pin SSOP	-40 to +85° C

**"LF" suffix to the part number are the Pb-Free configuration and are RoHS compliant.**

While the information presented herein has been checked for both accuracy and reliability, Integrated Device Technology (IDT) assumes no responsibility for either its use or for the infringement of any patents or other rights of third parties, which would result from its use. No other circuits, patents, or licenses are implied. This product is intended for use in normal commercial applications. Any other applications such as those requiring extended temperature range, high reliability, or other extraordinary environmental requirements are not recommended without additional processing by IDT. IDT reserves the right to change any circuitry or specifications without notice. IDT does not authorize or warrant any IDT product for use in life support devices or critical medical instruments.

## Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
  - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
  - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
