

## Description

The ICS580-01 is a clock multiplexer (mux) designed to switch between two clock sources with no glitches or short pulses. The operation of the mux is controlled by an input pin but the part can also be configured to switch automatically if one of the input clocks stops. The part also provides clock detection by reporting when an input clock has stopped.

For a clock mux with zero delay and smooth switching, see either the ICS581-01 or the ICS581-02.

## Features

- 16-pin SOIC and 16-pin TSSOP packages available
- Pb (lead) free package
- No short pulses or glitches on output
- Operates from 2 to 220 MHz
- Low skew outputs
- Clock detect feature
- Ideal for systems with back-up or redundant clocks
- Selectable timeouts for clock detection
- Separate supply voltages allow power supply voltage translation
- Operates from 2.5 V to 5 V

## Block Diagram

### Pin Assignment

### Timeout Selection

DIV	Nominal Timeout
0	600 ns
1	75 ns

## Pin Descriptions

Pin Number	Pin Name	Pin Type	Pin Description
1	SELB	Input	Mux select. Selects INB when high. Internal pull-up.
2	DIV	Input	Time out select. See table above. Internal pull-up.
3	VDDI	Power	Supply for input clocks only. Can be higher than VDDC.
4	INA	Input	Input Clock A.
5	INB	Input	Input Clock B.
6	GND	Power	Connect to ground.
7	OE4	Input	Output enable. Tri-states NO_INB when low. Internal pull-up.
8	OE3	Input	Output enable. Tri-states NO_INA when low. Internal pull-up.
9	OE2	Input	Output enable. Tri-states CLK2 when low. Internal pull-up.
10	GND	Power	Connect to ground.
11	NO_INB	Output	Goes high when clock on INB stops.
12	NO_INA	Output	Goes high when clock on INA stops.
13	CLK2	Output	Clock 2 output. Low skew compared to CLK1.
14	CLK1	Output	Clock 1 output. Low skew compared to CLK2.
15	VDDC	Power	Main chip supply. Output clocks amplitude will match this VDD.
16	OE1	Input	Output enable. Tri-states CLK1 when low. Internal pull-up.

## Device Operation

The ICS580-01 consists of a glitch free mux between INA and INB controlled by SELB. The device is designed to switch between two clocks, whether running or not. In the first example, clocks are running on both INA and INB. When SELB changes, the output clock goes low after three cycles of the output clock (nominally). The output then stays low for three cycles of the new input clock (nominally) and then starts with the new input clock. This is shown in Figure 1.

**Figure 1**

In the second example, one of the inputs was selected and running but has since stopped (either high or low). This is indicated by either NO\_INA or NO\_INB going high depending on whether INA or INB has stopped. These signals go high following a selectable time-out period after the clock has stopped. The timeout period is determined by the DIV input in. The SELB pin is now changed to select the new input clock which is running. The output clock immediately goes low and stays low for three cycles of the new input clock and then starts with the new input clock. Figure 2 shows an example of this

**Figure 2**

## Application Example

In the third example, the ICS580-01 is configured to automatically switch clocks when an input stops. The clock that could stop is connected to INA while the backup clock (always running) is connected to INB. The output NO\_INA is connected to SELB. This means that when the clock on INA stops, NO\_INA goes high selecting the clock on INB which is muxed to the output after three cycles. When the clock on INA restarts, NO\_INA immediately goes low, selecting the clock on INA. The output then switches in the manner described in the first example.

The circuit diagram in Figure 3 shows a typical connection for this example. Note that CLK2 and NO\_INB are unused and are disabled by grounding OE2 and OE4. A  $33\Omega$  series termination resistor is used on the clock output and two decoupling capacitors of  $0.01\mu\text{F}$  are used. All other inputs are left floating and are therefore pulled high by the on-chip pull-ups.

## Output Enable

Each output has a dedicated output enable pin. If an output is unused, it should be tri-stated by tying the appropriate output enable pin to ground.

## External Components

The ICS580-01 requires two  $0.01\mu\text{F}$  decoupling capacitors, one between VDDI and GND and one between VDDC and GND. Series termination resistors of  $33\Omega$  can be used on CLK1 and CLK2.

## Split Power Supplies

The VDDI pin provides the power for the INA and INB input buffers only. All the other inputs and the rest of the chip are connected to VDDC. This allows for supply voltage translation. For example, INA and INB could be 5V clocks (VDDI = 5V) and the rest of the chip could use a 3.3V supply on VDDC giving 3.3V output clocks. For correct operation VDDI must always be greater than or equal to VDDC.

## Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the ICS580-01. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

Item	Rating
Supply Voltage, VDD	7V
All Inputs and Outputs	-0.5V to VDD+0.5V
Ambient Operating Temperature	0 to +70° C
Ambient Operating Temperature	-40 to +85° C
Storage Temperature	-65 to +150° C
Junction Temperature	125° C
Soldering Temperature	260° C

## Recommended Operation Conditions

Parameter	Min.	Typ.	Max.	Units
Ambient Operating Temperature	0		+70	°C
Ambient Operating Temperature	-40		+85	°C
Power Supply Voltage (measured in respect to GND)	+2.5		+5.5	V

## DC Electrical Characteristics

Unless stated otherwise, VDD = 3.3V ±5%, Ambient Temperature -40 to +85° C

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Units
Operating Voltage	VDDC		2.5		5.5	V
	VDDI		VDDC		5.5	V
Supply Current	IDD	50 MHz, no load		6		mA
Input High Voltage	V <sub>IH</sub>	Non-clock inputs	2		VDDC	V
Input Low Voltage	V <sub>IL</sub>	Non-clock inputs			0.8	V
Input High Voltage	V <sub>IH</sub>	INA and INB only Note 3	(VDDC/2)+1		VDDI	V

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Units
Input Low Voltage	$V_{IL}$	INA and INB only Note 3			$(V_{DDC}/2)-1$	V
Input Capacitance	$C_{IN}$			4		pF
Output High Voltage	$V_{OH}$	$I_{OH} = -12$ mA	$V_{DDC}-0.5$			V
Output Low Voltage	$V_{OL}$	$I_{OL} = 12$ mA			0.5	V
Short Circuit Current	$I_{OS}$			$\pm 70$		mA
On-chip pull-up Resistor	$R_{PU}$	Non-clock inputs Pull-up to $V_{DDC}$		250		k $\Omega$

## AC Electrical Characteristics

Unless stated otherwise,  $V_{DD} = 3.3V \pm 5\%$ , Ambient Temperature  $-40$  to  $+85^\circ$  C

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Units
Input Frequency INA and INB, Note 1	$f_{IN}$	$V_{DDC} = 5V$	1/timeout		270	MHz
		$V_{DDC} = 3.3V$	1/timeout		220	MHz
		$V_{DDC} = 2.7V$	1/timeout		180	MHz
Propagation Delay INA or INB to output		$V_{DDC} = 5V$		4	8	ns
		$V_{DDC} = 3.3V$		5	10	ns
		$V_{DDC} = 2.7V$		6	12	ns
Transition Detector Timeout, DIV = 0		$V_{DDI} = 5V$	175	350	750	ns
		$V_{DDI} = 3.3V$	500	1000	2000	ns
		$V_{DDI} = 2.7V$	750	1500	3000	ns
Transition Detector Timeout, DIV = 1		$V_{DDI} = 5V$	20	40	80	ns
		$V_{DDI} = 3.3V$	55	110	210	ns
		$V_{DDI} = 2.7V$	100	200	400	ns
Output Clock Rise Time					1.5	ns
Output Clock Fall Time					1.5	ns
Output Clock Skew		CLK1 to CLK2 Note 2	-250	0	250	ps

Note 1: Frequencies less than the minimum may cause a timeout which will not guarantee glitch-free switching unless the clock is actually stopped.

Note 2: Assumes identically loaded outputs with identical rise times, measured at  $V_{DD}/2$ .

Note 3: Output duty cycle is set by duty cycle of input clock at  $V_{DDC}/2$ .

**Thermal Characteristics (16-pin SOIC)**

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Units
Thermal Resistance Junction to Ambient	$\theta_{JA}$	Still air		120		°C/W
	$\theta_{JA}$	1 m/s air flow		115		°C/W
	$\theta_{JA}$	3 m/s air flow		105		°C/W
Thermal Resistance Junction to Case	$\theta_{JC}$			58		°C/W

**Thermal Characteristics (16-pin TSSOP)**

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Units
Thermal Resistance Junction to Ambient	$\theta_{JA}$	Still air		78		°C/W
	$\theta_{JA}$	1 m/s air flow		70		°C/W
	$\theta_{JA}$	3 m/s air flow		68		°C/W
Thermal Resistance Junction to Case	$\theta_{JC}$			37		°C/W

## Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
  - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
  - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
