

### Features

- ◆ High-speed clock-to-data output times
    - Commercial: 12ns (max.)
  - ◆ Low-power operation
    - IDT70914S
    - Active: 850 mW (typ.)
    - Standby: 50 mW (typ.)
  - ◆ Architecture based on Dual-Port RAM cells
    - Allows full simultaneous access from both ports
  - ◆ Clock Enable feature
  - ◆ TTL-compatible, single 5V ( $\pm 10\%$ ) power supply
- ◆ Synchronous operation
    - 4ns setup to clock, 1ns hold on all control, data, and address inputs
    - Data input, address, and control registers
    - Fast 12ns clock to data out
    - Self-timed write allows fast cycle times
    - 16ns cycle times, 60MHz operation
  - ◆ Guaranteed data output hold times
  - ◆ Available in an 80-pin TQFP
  - ◆ Green parts available, see ordering information

### Functional Block Diagram

## Description

The IDT70914 is a high-speed 4K x 9 bit synchronous Dual-Port RAM. The memory array is based on Dual-Port memory cells to allow simultaneous access from both ports. Registers on control, data, and address inputs provide low set-up and hold times. The timing latitude provided by this approach allow systems to be designed with very short cycle times. With an input data register, this device has been optimized for applications having unidirectional data flow or bidirectional data flow in bursts.

The IDT70914 utilizes a 9-bit wide data path to allow for parity at the

user's option. This feature is especially useful in data communication applications where it is necessary to use a parity bit for transmission/reception error checking.

Fabricated using CMOS high-performance technology, these Dual-Ports typically operate on only 850mW of power at maximum high-speed clock-to-data output times as fast as 12ns. An automatic power down feature, controlled by  $\overline{CE}$ , permits the on-chip circuitry of each port to enter a very low standby power mode.

The IDT70914 is packaged in an 80-pin TQFP.

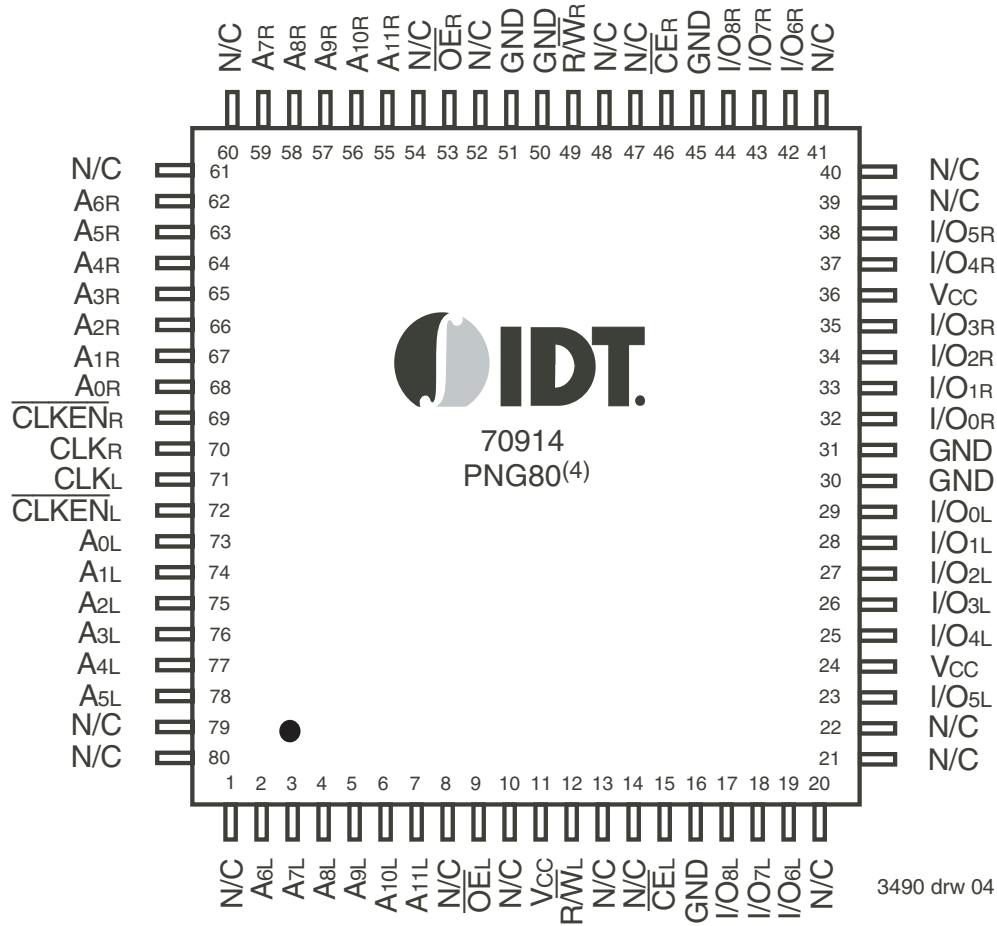

## Pin Configurations<sup>(1,2,3)</sup>

**NOTES:**

1. All Vcc pins must be connected to power supply.
2. All ground pins must be connected to ground supply.
3. J68-1 package body is approximately .95 in x .95 in x .17 in.
4. This package code is used to reference the package diagram.

Pin Configuration<sup>(1,2,3)</sup> (con't.)

**NOTES:**

1. All V<sub>CC</sub> pins must be connected to power supply.
2. All ground pins must be connected to ground supply.
3. PN80-1 package body is approximately 14mm x 14mm x 1.4mm.
4. This package code is used to reference the package diagram.

### Absolute Maximum Ratings<sup>(1)</sup>

Symbol	Rating	Com'l Only	Unit
V <sub>TERM</sub> <sup>(2)</sup>	Terminal Voltage with Respect to GND	-0.5 to +7.0	V
V <sub>TERM</sub> <sup>(2)</sup>	Terminal Voltage	-0.5 to V <sub>CC</sub>	V
T <sub>BIAS</sub>	Temperature Under Bias	-55 to +125	°C
T <sub>STG</sub>	Storage Temperature	-65 to +150	°C
I <sub>OUT</sub>	DC Output Current	50	mA

3490 tbl 01

**NOTES:**

- Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
- V<sub>TERM</sub> must not exceed V<sub>CC</sub> + 10% for more than 25% of the cycle time or 10ns maximum, and is limited to ≤ 20mA for the period of V<sub>TERM</sub> ≥ V<sub>CC</sub> + 10%.

### Capacitance

(T<sub>A</sub> = +25°C, f = 1.0MHz) TQFP Only

Symbol	Parameter	Conditions	Max.	Unit
C <sub>IN</sub>	Input Capacitance	V <sub>IN</sub> = 3dV	8	pF
C <sub>OUT</sub>	Output Capacitance	V <sub>OUT</sub> = 3dV	9	pF

3490 tbl 04

**NOTES:**

- These parameters are determined by device characterization, but are not production tested.
- 3dV references the interpolated capacitance when the input and output switch from 0V to 3V or from 3V to 0V.

### Maximum Operating Temperature and Supply Voltage<sup>(1,2)</sup>

Grade	Ambient Temperature	GND	V <sub>CC</sub>
Commercial	0°C to +70°C	0V	5.0V ± 10%

3490 tbl 02

**NOTES:**

- This is the parameter T<sub>A</sub>. This is the "instant on" case temperature
- Industrial temperature: for specific speeds, packages and powers contact your

### Recommended DC Operating Conditions

Symbol	Parameter	Min.	Typ.	Max.	Unit
V <sub>CC</sub>	Supply Voltage	4.5	5.0	5.5	V
GND	Ground	0	0	0	V
V <sub>IH</sub>	Input High Voltage	2.2	—	6.0 <sup>(2)</sup>	V
V <sub>IL</sub>	Input Low Voltage	-0.5 <sup>(1)</sup>	—	0.8	V

3490 tbl 03

**NOTES:**

- V<sub>IL</sub> ≥ -1.5V for pulse width less than 10ns.
- V<sub>TERM</sub> must not exceed V<sub>CC</sub> + 10%.

### DC Electrical Characteristics Over the Operating Temperature and Supply Voltage Range (V<sub>CC</sub> = 5.0V ± 10%)

Symbol	Parameter	Test Conditions	70914S		Unit
			Min.	Max.	
I <sub>LI</sub>	Input Leakage Current <sup>(1)</sup>	V <sub>CC</sub> = 5.5V, V <sub>IN</sub> = 0V to V <sub>CC</sub>	—	10	μA
I <sub>LO</sub>	Output Leakage Current	$\overline{CE}$ = V <sub>IH</sub> , V <sub>OUT</sub> = 0V to V <sub>CC</sub>	—	10	μA
V <sub>OL</sub>	Output Low Voltage	I <sub>OL</sub> = +4mA	—	0.4	V
V <sub>OH</sub>	Output High Voltage	I <sub>OH</sub> = -4mA	2.4	—	V

3490 tbl 05

**NOTE:**

- At V<sub>CC</sub> ≤ 2.0V, input leakages are undefined

3490 tbl 08b

NOTES:

1. Transition is measured 0mV from Low or High impedance voltage with the Output Test Load (Figure 2).
2. This parameter is guaranteed by device characterization, but is not production tested.
3. Industrial temperature: for specific speeds, packages and powers contact your sales office.

### Timing Waveform of Read Cycle, Either Side

3490 drw 08

### Timing Waveform of Write with Port-to-Port Read<sup>(2,3,4)</sup>

3490 drw 09

**NOTES:**

1. Transition is measured  $\pm 200\text{mV}$  from Low or High-impedance voltage with the Output Test Load (Figure 2).
2.  $\overline{CE}_L = \overline{CE}_R = V_{IL}$ ,  $\overline{CLKEN}_L = \overline{CLKEN}_R = V_{IL}$ .
3.  $\overline{OE} = V_{IL}$  for the reading port, port 'B'.
4. All timing is the same for left and right ports. Ports "A" may be either the left or right port. Port "B" is opposite from port "A".
5. If  $t_{CCS} \leq$  maximum specified, then data from right port READ is not valid until the maximum specified for  $t_{CWD}$ .  
If  $t_{CCS} >$  maximum specified, then data from right port READ is not valid until  $t_{CCS} + t_{CD}$ .  $t_{CWD}$  does not apply in this case.

Timing Waveform of Read-to-Write Cycle No. 1<sup>(1,2)</sup> ( $t_{cyc} = \text{min.}$ )

Timing Waveform of Read-to-Write Cycle No. 2<sup>(4)</sup> ( $t_{cyc} > \text{min.}$ )

NOTES:

1. For  $t_{cyc} = \text{min.}$ ; data out coincident with the rising edge of the subsequent write clock can occur. To ensure writing to the correct address location, the write must be repeated on the second write clock rising edge. If  $\overline{CE} = V_{IL}$ , invalid data will be written into array. The  $An+1$  must be rewritten on the following cycle.
2.  $\overline{OE}$  LOW throughout.
3. Transition is measured 0mV from Low or High-impedance voltage with the Output Test Load (Figure 2).
4. For  $t_{cyc} > \text{min.}$ ;  $\overline{OE}$  may be used to avoid data out coincident with the rising edge of the subsequent write clock. Use of  $\overline{OE}$  will eliminate the need for the write to be repeated.

## Functional Description

The IDT70914 provides a true synchronous Dual-Port Static RAM interface. Registered inputs provide very short set-up and hold times on address, data, and all critical control inputs. All internal registers are clocked on the rising edge of the clock signal. An asynchronous output enable is provided to ease asynchronous bus interfacing.

The internal write pulse width is dependent on the LOW to HIGH

transitions of the clock signal allowing the shortest possible realized cycle times. Clock enable inputs are provided to stall the operation of the address and data input registers without introducing clock skew for very fast interleaved memory applications.

A HIGH on the  $\overline{CE}$  input for one clock cycle will power down the internal circuitry to reduce static power consumption.

Truth Table I: Read/Write Control<sup>(1)</sup>

Inputs			Asynchronous	Outputs	Mode
Synchronous <sup>(3)</sup>		$\overline{OE}$			
CLK	$\overline{CE}$		R/W	I/O <sub>0-8</sub>	
↑	H	X	X	High-Z	
↑	L	L	X	DATA <sub>IN</sub>	Selected and Write Enabled
↑	L	H	L	DATA <sub>OUT</sub>	Read Selected and Data Output Enable Read
↑	X	X	H	High-Z	Outputs Disabled

3490 tbl 09

Truth Table II: Clock Enable Function Table<sup>(1)</sup>

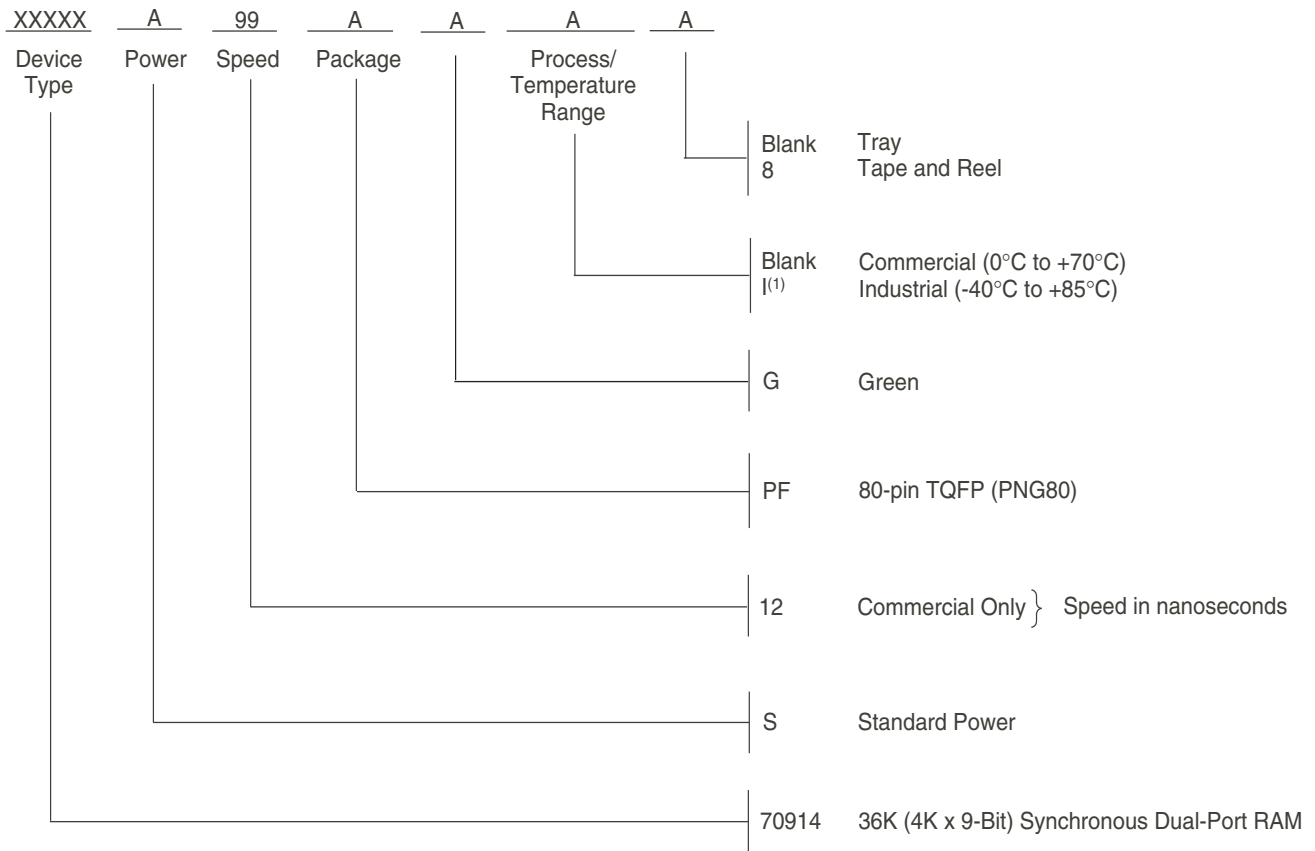

Mode	Inputs		Register Inputs		Register Outputs <sup>(4)</sup>	
	CLK <sup>(3)</sup>	$\overline{CLKEN}$ <sup>(2)</sup>	ADDR	DATA <sub>IN</sub>	ADDR	DATA <sub>OUT</sub>
Load "1"	↑	L	H	H	H	H
Load "0"	↑	L	L	L	L	L
Hold (do nothing)	↑	H	X	X	NC	NC
	X	H	X	X	NC	NC

3490 tbl 10

**NOTES:**

- 'H' = HIGH voltage level steady state, 'h' = HIGH voltage level one set-up time prior to the LOW-to-HIGH clock transition, 'L' = LOW voltage level steady state 'l' = LOW voltage level one set-up time prior to the LOW-to-HIGH clock transition, 'X' = Don't care, 'NC' = No change
- $\overline{CLKEN}$  =  $V_{IL}$  must be clocked in during Power-Up.
- Control signals are initiated and terminated on the rising edge of the CLK, depending on their input level. When  $\overline{R/W}$  and  $\overline{CE}$  are LOW, a write cycle is initiated on the LOW-to-HIGH transition of the CLK. Termination of a write cycle is done on the next LOW-to-HIGH transition of the CLK.
- The register outputs are internal signals from the register inputs being clocked in or disabled by  $\overline{CLKEN}$ .

### Ordering Information

**NOTES:**

- Industrial temperature range is available on selected TQFP packages in standard power. For specific speeds, packages and powers contact your sales office.  
**LEAD FINISH (SnPb) parts are Obsolete. Product Discontinuation Notice - PDN# SP-17-02**  
 Note that information regarding recently obsoleted parts are included in this datasheet for customer convenience.

## Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
  - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
  - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
