

LEAD FINISH (SnPb) ARE IN EOL PROCESS - LAST TIME BUY EXPIRES JUNE 15, 2018

Features

- ◆ High-speed access
 - Military: 35/45/55/70ns (max.)
 - Industrial: 25/55ns (max.)
 - Commercial: 20/25/35/45/55/70ns (max.)
- ◆ Low-power operation
 - IDT7134SA
 - Active: 700mW (typ.)
 - Standby: 5mW (typ.)
 - IDT7134LA
 - Active: 700mW (typ.)
 - Standby: 1mW (typ.)
- ◆ Fully asynchronous operation from either port
- ◆ Battery backup operation—2V data retention (LA only)
- ◆ TTL-compatible; single 5V (±10%) power supply
- ◆ Available in 48-pin DIP, LCC, Flatpack and 52-pin PLCC
- ◆ Military product compliant to MIL-PRF-38535 QML
- ◆ Industrial temperature range (–40°C to +85°C) is available for selected speeds
- ◆ Green parts available, see ordering information

Functional Block Diagram

2720 drw 01

Description

The IDT7134 is a high-speed 4K x 8 Dual-Port Static RAM designed to be used in systems where on-chip hardware port arbitration is not needed. This part lends itself to those systems which cannot tolerate wait states or are designed to be able to externally arbitrate or withstand contention when both sides simultaneously access the same Dual-Port RAM location.

The IDT7134 provides two independent ports with separate control, address, and I/O pins that permit independent, asynchronous access for reads or writes to any location in memory. It is the user's responsibility to ensure data integrity when simultaneously accessing the same memory location from both ports. An automatic power down feature,

controlled by \overline{CE} , permits the on-chip circuitry of each port to enter a very low standby power mode.

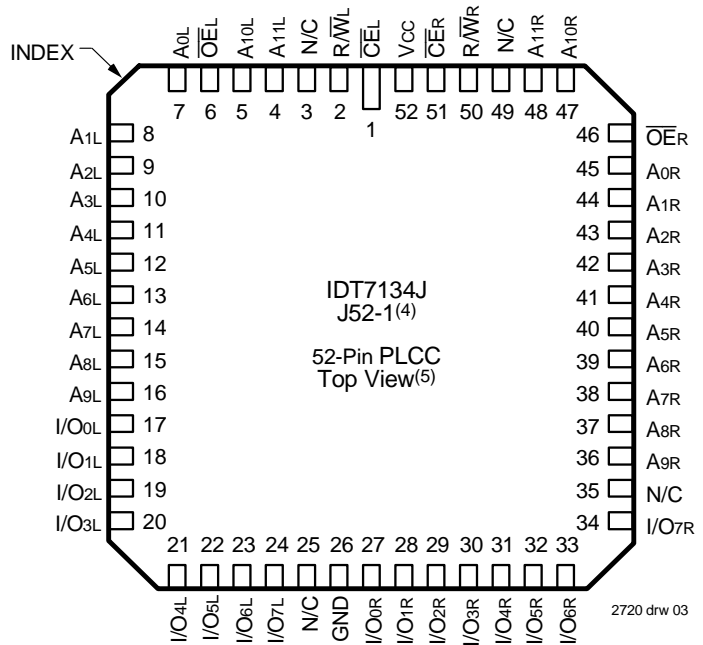

Fabricated using CMOS high-performance technology, these Dual-Ports typically operate on only 700mW of power. Low-power (LA) versions offer battery backup data retention capability, with each port typically consuming 200 μ W from a 2V battery.

The IDT7134 is packaged on either a sidebraze or plastic 48-pin DIP, 48-pin LCC, 52-pin PLCC and 48-pin Flatpack. Military grade product is manufactured in compliance with MIL-PRF-38535 QML, making it ideally suited to military temperature applications demanding the highest level of performance and reliability.

Pin Configurations^(1,2,3)

2720 drw 02

2720 drw 03

2720 drw 04

NOTES:

1. All Vcc pins must be connected to the power supply.
2. All GND pins must be connected to the ground supply.
3. P48-1 package body is approximately .55 in x 2.43 in x .18 in.
C48-2 package body is approximately .62 in x 2.43 in x .15 in.
J52-1 package body is approximately .75 in x .75 in x .17 in.
L48-1 package body is approximately .57 in x .57 in x .68 in.
F48-1 package body is approximately .75 in x .75 in x .11 in.
4. This package code is used to reference the package diagram.
5. This text does not indicate orientation of actual part-marking.

Absolute Maximum Ratings⁽¹⁾

Symbol	Rating	Commercial & Industrial	Military	Unit
V _{TERM} ⁽²⁾	Terminal Voltage with Respect to GND	-0.5 to +7.0	-0.5 to +7.0	V
T _{BIAS}	Temperature Under Bias	-55 to +125	-65 to +135	°C
T _{STG}	Storage Temperature	-65 to +150	-65 to +150	°C
P _T ⁽³⁾	Power Dissipation	1.5	1.5	W
I _{OUT}	DC Output Current	50	50	mA

2720 tbl 01

NOTES:

- Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
- V_{TERM} must not exceed V_{CC} + 10% for more than 25% of the cycle time or 10 ns maximum, and is limited to ≤ 20mA for the period of V_{TERM} ≥ V_{CC} + 10%.
- V_{TERM} = 5.5V.

Capacitance⁽¹⁾ (T_A = +25°C, f = 1.0MHz)

Symbol	Parameter	Conditions ⁽²⁾	Max.	Unit
C _{IN}	Input Capacitance	V _{IN} = 3dV	11	pF
C _{OUT}	Output Capacitance	V _{OUT} = 3dV	11	pF

2720 tbl 02

NOTES:

- This parameter is determined by device characterization but is not production tested.
- 3dV references the interpolated capacitance when the input and output signals switch from 0V to 3V and from 3V to 0V.

DC Electrical Characteristics Over the Operating Temperature and Supply Voltage Range (V_{CC} = 5V ± 10%)

Symbol	Parameter	Test Conditions	7134SA		7134LA		Unit
			Min.	Max.	Min.	Max.	
I _L	Input Leakage Current ⁽¹⁾	V _{CC} = 5.5V, V _{IN} = 0V to V _{CC}	—	10	—	5	μA
I _{LO}	Output Leakage Current	\overline{CE} - V _{IH} , V _{OUT} = 0V to V _{CC}	—	10	—	5	μA
V _{OL}	Output Low Voltage	I _{OL} = 6mA	—	0.4	—	0.4	V
		I _{OL} = 8mA	—	0.5	—	0.5	V
V _{OH}	Output High Voltage	I _{OH} = -4mA	2.4	—	2.4	—	V

2720 tbl 05

NOTES:

- At V_{CC} ≤ 2.0V input leakages are undefined.

Recommended Operating Temperature and Supply Voltage^(1,2)

Grade	Ambient Temperature	GND	V _{CC}
Military	-55°C to +125°C	0V	5.0V ± 10%
Commercial	0°C to +70°C	0V	5.0V ± 10%
Industrial	-40°C to +85°C	0V	5.0V ± 10%

2720 tbl 03

NOTES:

- This is the parameter T_A. This is the "instant on" case temperature.

Recommended DC Operating Conditions

Symbol	Parameter	Min.	Typ.	Max.	Unit
V _{CC}	Supply Voltage	4.5	5.0	5.5	V
GND	Ground	0	0	0	V
V _{IH}	Input High Voltage	2.2	—	6.0 ⁽²⁾	V
V _{IL}	Input Low Voltage	-0.5 ⁽¹⁾	—	0.8	V

2720 tbl 04

NOTES:

- V_{IL} (min.) ≥ -1.5V for pulse width less than 10ns.
- V_{TERM} must not exceed V_{CC} + 10%.

DC Electrical Characteristics Over the Operating Temperature and Supply Voltage Range^(1,2) (V_{CC} = 5.0V ± 10%)

2720 tbl 06b

NOTES:

- 'X' in part number indicates power rating (SA or LA).
- V_{CC} = 5V, T_A = +25°C for typical, and parameters are not production tested.
- f_{MAX} = 1/TRC = All inputs cycling at f = 1/TRC (except Output Enable). f = 0 means no address or control lines change. Applies only to inputs at CMOS level standby I_{SB3}.

Data Retention Characteristics Over All Temperature Ranges

(LA Version Only) $V_{LC} = 0.2V$, $V_{HC} = V_{CC} - 0.2V$

Symbol	Parameter	Test Condition	Min.	Typ. ⁽¹⁾	Max.	Unit
V _{DR}	V _{CC} for Data Retention	V _{CC} = 2V	2.0	—	—	V
I _{CCDR}	Data Retention Current	$\overline{CE} \geq V_{HC}$ $V_{IN} \geq V_{HC}$ or $\leq V_{LC}$	MIL. & IND. —	100	4000	μA

2720 tbl 10b

NOTES:

1. Transition is measured 0mV from Low or High-impedance voltage with Output Test Load (Figure 2).
2. This parameter is guaranteed by device characterization, but is not production tested.
3. The specification for t_{DH} must be met by the device supplying write data to the RAM under all operating conditions. Although t_{DH} and t_{OW} values will vary over voltage and temperature, the actual t_{DH} will always be smaller than the actual t_{OW}.
4. Port-to-port delay through RAM cells from writing port to reading port, refer to "Timing Waveform of Write with Port-to-Port Read".
5. 'X' in part number indicates power rating (SA or LA).

Timing Waveform of Write with Port-to-Port Read^(1,2,3)

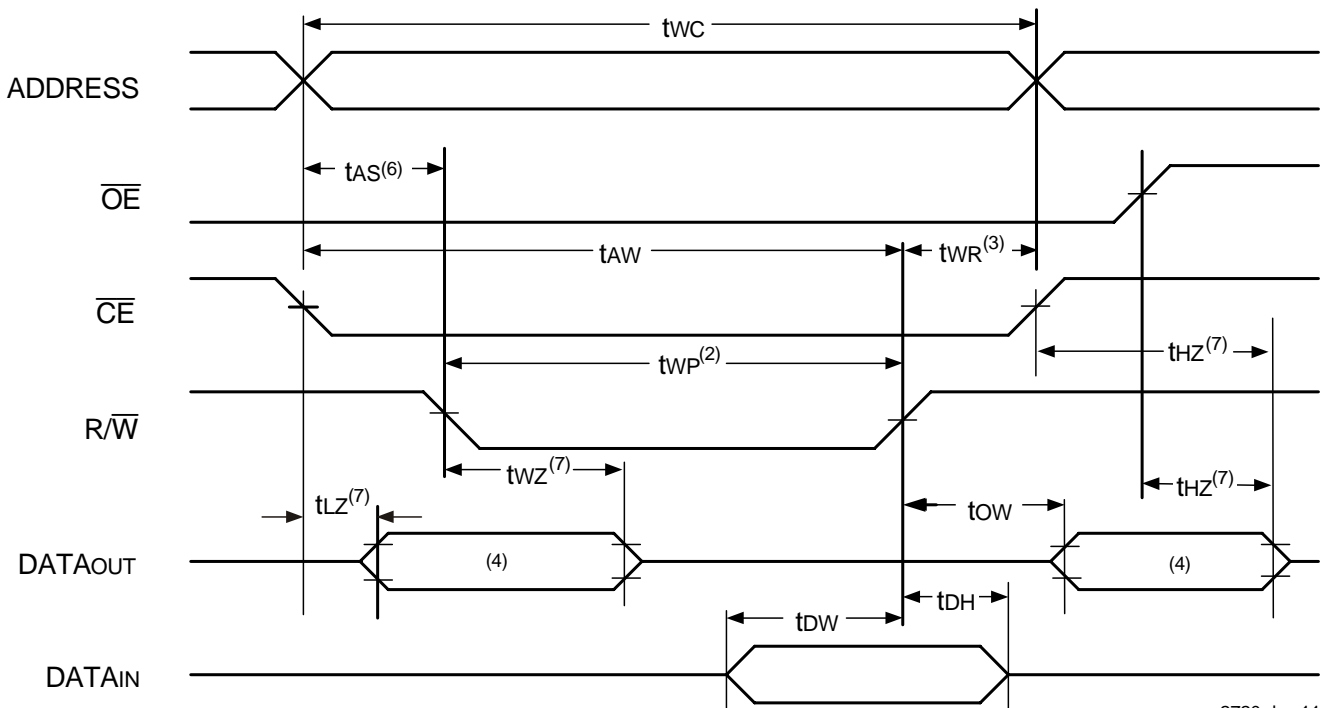

NOTES:

1. Write cycle parameters should be adhered to, in order to ensure proper writing.
2. $\overline{CE}_L = \overline{CE}_R = V_{IL}$, $\overline{OE}'_B = V_{IL}$.
3. Port "A" may be either left or right port. Port "B" is the opposite from port "A".

2720 drw 10

Timing Waveform of Write Cycle No. 1, R/W Controlled Timing^(1,5,8)

NOTES:

1. $\overline{R/W}$ or \overline{CE} must be HIGH during all address transitions.
2. A write occurs during the overlap (t_{EW} or t_{WP}) of a $\overline{CE} = V_{IL}$ and $\overline{R/W} = V_{IL}$.
3. t_{WR} is measured from the earlier of \overline{CE} or $\overline{R/W}$ going to V_{IH} to the end-of-write cycle.
4. During this period, the I/O pins are in the output state, and input signals must not be applied.
5. If the $\overline{CE} = V_{IL}$ transition occurs simultaneously with or after the $\overline{R/W} = V_{IL}$ transition, the outputs remain in the High-impedance state.
6. Timing depends on which enable signal (\overline{CE} or $\overline{R/W}$) is asserted last.
7. This parameter is guaranteed by device characterization, but is not production tested. Transition is measured 0mV from steady state with the Output Test Load (Figure 2).
8. If $\overline{OE} = V_{IL}$ during a $\overline{R/W}$ controlled write cycle, the write pulse width must be the larger of t_{WP} or $(t_{WZ} + t_{OW})$ to allow the I/O drivers to turn off data to be placed on the bus for the required t_{OW} . If $\overline{OE} = V_{IH}$ during an $\overline{R/W}$ controlled write cycle, this requirement does not apply and the write pulse can be as short as the specified t_{WP} .

2720 drw 11

Timing Waveform of Write Cycle No. 2, $\overline{\text{CE}}$ Controlled Timing^(1,4)

2720 drw 12

NOTES:

1. $\overline{\text{R/W}}$ or $\overline{\text{CE}}$ must be HIGH during all address transitions.
2. A write occurs during the overlap (t_{EW} or t_{WP}) of a $\overline{\text{CE}} = \text{V}_{\text{IL}}$ and $\overline{\text{R/W}} = \text{V}_{\text{IL}}$.
3. t_{WR} is measured from the earlier of $\overline{\text{CE}}$ or $\overline{\text{R/W}}$ going HIGH to the end-of-write cycle.
4. If the $\overline{\text{CE}}$ LOW transition occurs simultaneously with or after the $\overline{\text{R/W}}$ LOW transition, the outputs remain in the High-impedance state.
5. Timing depends on which enable signal ($\overline{\text{CE}}$ or $\overline{\text{R/W}}$) is asserted last.

Functional Description

The IDT7134 provides two ports with separate control, address, and I/O pins that permit independent access for reads or writes to any location in memory. These devices have an automatic power down feature controlled by $\overline{\text{CE}}$. The $\overline{\text{CE}}$ controls on-chip power down circuitry that permits the respective port to go into standby mode when not selected ($\overline{\text{CE}}$ HIGH). When a port is enabled, access to the entire memory array is permitted. Each port has its own Output Enable control ($\overline{\text{OE}}$). In the read mode, the port's $\overline{\text{OE}}$ turns on the output drivers when set LOW. Non-contention READ/WRITE conditions are illustrated in Truth Table I.

Truth Table I – Read/Write Control

Left or Right Port ⁽¹⁾				Function
$\overline{\text{R/W}}$	$\overline{\text{CE}}$	$\overline{\text{OE}}$	D0-7	
X	H	X	Z	Port Deselected and in Power-Down Mode, ISB2 or ISB4
X	H	X	Z	$\overline{\text{CE}}_{\text{R}} = \overline{\text{CE}}_{\text{L}} = \text{H}$, Power Down Mode ISB1 or ISB3
L	L	X	DATA _{IN}	Data on port written into memory
H	L	L	DATA _{OUT}	Data in memory output on port
X	X	H	Z	High impedance outputs

2720 tbl 11

NOTE:

1. A0L - A11L \neq A0R - A11R
"H" = V_{IH}, "L" = V_{IL}, "X" = Don't Care, and "Z" = High Impedance

Ordering Information

NOTES:

- Contact your local sales office for industrial temp. range for other speeds, packages and powers.
- Green parts available. For specific speeds, packages and powers contact your local sales office.
LEAD FINISH (SnPb) parts are in EOL process. Product Discontinuation Notice - PDN# SP-17-02
- For "P", plastic DIP, when ordering green package the suffix is "PDG".

	Page 3	Added "LA only)" to paragraph
	Page 4	Fixed P48-1 package description
	Page 10	Increased storage temperature parameters
01/17/06:	Page 1	Clarified TA parameter
	Page 11	DC Electrical parameters—changed wording from "open" to "disabled"
	Page 1 & 11	Fixed Truth Table specification in "Functional Description" paragraph
08/12/08:	Page 11	Added green availability to features
		Added green indicator to ordering information
		Replaced old IDT™ with new IDT™ logo
		Corrected typo in the ordering information

Datasheet Document History (con't.)

10/21/08:	Page 11	Removed "IDT" from orderable part number
02/04/13:	Page 1, 4, 6 & 8	Removed Military 25ns & Industrial 35ns speed grades from Features and corrected the headers of the DC Chars and AC Chars tables to indicate this change
	Page 11	Added T & R indicator to and removed Military 25ns & Industrial 35ns speed grades from the ordering information
	Page 2	Typo/correction
01/11/18:		Product Discontinuation Notice - PDN# SP-17-02 Last time buy expires June 15, 2018

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
