

### Features

- ◆ High-speed access
  - Commercial & Industrial: 25/35ns (max.)
- ◆ Low-power operation
  - IDT71V321L
  - Active: 325mW (typ.)
  - Standby: 1mW (typ.)
- ◆ Two  $\overline{\text{INT}}$  flags for port-to-port communications
- ◆ On-chip port arbitration logic (IDT71V321 only)
- ◆ **BUSY** output flag
- ◆ Fully asynchronous operation from either port
- ◆ Battery backup operation—2V data retention (L only)
- ◆ TTL-compatible, single 3.3V power supply
- ◆ Available in 52-pin PLCC, 64-pin TQFP and STQFP packages
- ◆ Industrial temperature range (–40°C to +85°C) is available for selected speeds
- ◆ Green parts available, see ordering information

### Functional Block Diagram

3026 drw 01

#### NOTES:

1. IDT71V321 (MASTER):  $\overline{\text{BUSY}}$  is an output
2.  $\overline{\text{BUSY}}$  and  $\overline{\text{INT}}$  are totem-pole outputs.

## Description

The IDT71V321 is a high-speed 2K x 8 Dual-Port Static RAMs with internal interrupt logic for interprocessor communications. The IDT71V321 is designed to be used as a stand-alone 8-bit Dual-Port RAM.

The device provides two independent ports with separate control, address, and I/O pins that permit independent, asynchronous access for reads or writes to any location in memory. An automatic power down feature, controlled by  $\overline{CE}$ , permits the on chip circuitry of each

port to enter a very low standby power mode.

Fabricated using CMOS high-performance technology, these devices typically operate on only 325mW of power. Low-power (L) versions offer battery backup data retention capability, with each Dual-Port typically consuming 200 $\mu$ W from a 2V battery.

The IDT71V321 devices are packaged in a 52-pin PLCC, a 64-pin TQFP (thin quad flatpack), and a 64-pin STQFP (super thin quad flatpack).

## Pin Configurations<sup>(1,2,3)</sup>

3026 drw 02

3026 drw 03

### NOTES:

1. All Vcc pins must be connected to power supply.
2. All GND pins must be connected to ground supply.
3. J52-1 package body is approximately .75 in x .75 in x .17 in.  
PP64-1 package body is approximately 10mm x 10mm x 1.4mm.  
PN64-1 package body is approximately 14mm x 14mm x 1.4mm.
4. This package code is used to reference the package diagram.

Absolute Maximum Ratings<sup>(1)</sup>

Symbol	Rating	Commercial & Industrial	Unit
V <sub>TERM</sub> <sup>(2)</sup>	Terminal Voltage with Respect to GND	-0.5 to +4.6	V
T <sub>A</sub>	Operating Temperature	0 to +70	°C
T <sub>BIAS</sub>	Temperature Under Bias	-55 to +125	°C
T <sub>STG</sub>	Storage Temperature	-65 to +150	°C
I <sub>OUT</sub>	DC Output Current	50	mA

3026 tbl 01

NOTES:

- Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of the specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
- V<sub>TERM</sub> must not exceed V<sub>CC</sub> + 10% for more than 25% of the cycle time or 10ns maximum, and is limited to ≤ 20mA for the period of V<sub>TERM</sub> ≥ V<sub>CC</sub> + 10%.

Capacitance<sup>(1)</sup>

(T<sub>A</sub> = +25°C, f = 1.0MHz) TQFP Only

Symbol	Parameter	Conditions <sup>(2)</sup>	Max.	Unit
C <sub>IN</sub>	Input Capacitance	V <sub>IN</sub> = 3dV	9	pF
C <sub>OUT</sub>	Output Capacitance	V <sub>OUT</sub> = 3dV	10	pF

3026 tbl 04

NOTES:

- This parameter is determined by device characterization but is not production tested.
- 3dv references the interpolated capacitance when the input and output signals switch from 0V to 3V or from 3V to 0V.

Recommended Operating Temperature and Supply Voltage<sup>(1,2)</sup>

Grade	Ambient Temperature	GND	V <sub>CC</sub>
Commercial	0°C to +70°C	0V	3.3V ± 0.3V
Industrial	-40°C to +85°C	0V	3.3V ± 0.3V

3026 tbl 02

NOTES:

- This is the parameter T<sub>A</sub>. This is the "instant on" case temperature.
- Industrial temperature: for specific speeds, packages and powers contact your sales office.

Recommended DC Operating Conditions

Symbol	Parameter	Min.	Typ.	Max.	Unit
V <sub>CC</sub>	Supply Voltage	3.0	3.3	3.6	V
GND	Ground	0	0	0	V
V <sub>IH</sub>	Input High Voltage	2.0	—	V <sub>CC</sub> +0.3 <sup>(2)</sup>	V
V <sub>IL</sub>	Input Low Voltage	-0.3 <sup>(1)</sup>	—	0.8	V

3026 tbl 03

NOTES:

- V<sub>IL</sub> (min.) = -1.5V for pulse width less than 20ns.
- V<sub>TERM</sub> must not exceed V<sub>CC</sub> + 0.3V.

DC Electrical Characteristics Over the Operating Temperature and Supply Voltage Range (V<sub>CC</sub> = 3.3V ± 0.3V)

Symbol	Parameter	Test Conditions	71V321S		71V321L		Unit
			Min.	Max.	Min.	Max.	
I <sub>I</sub>	Input Leakage Current <sup>(1)</sup>	V <sub>CC</sub> = 3.6V, V <sub>IN</sub> = 0V to V <sub>CC</sub>	—	10	—	5	μA
I <sub>O</sub>	Output Leakage Current	$\overline{CE}$ = V <sub>IH</sub> , V <sub>OUT</sub> = 0V to V <sub>CC</sub> V <sub>CC</sub> = 3.6V	—	10	—	5	μA
V <sub>OL</sub>	Output Low Voltage	I <sub>OL</sub> = 4mA	—	0.4	—	0.4	V
V <sub>OH</sub>	Output High Voltage	I <sub>OH</sub> = -4mA	2.4	—	2.4	—	V

3026 tbl 05

NOTE:

- At V<sub>CC</sub> ≤ 2.0V input leakages are undefined.

DC Electrical Characteristics Over the Operating Temperature and Supply Voltage Range<sup>(1,2)</sup> (V<sub>CC</sub> = 3.3V ± 0.3V)

Symbol	Parameter	Test Condition	Version	71V321X25 Com'l & Ind		71V321X35 Com'l & Ind		71V321X55 Com'l & Ind		Unit
				Typ.	Max.	Typ.	Max.	Typ.	Max.

t <sub>dw</sub>	Data Valid to End-of-Write	12	—	20	—	20	—	ns
t <sub>hz</sub>	Output High-Z Time <sup>(1,2)</sup>	—	12	—	15	—	30	ns
t <sub>dh</sub>	Data Hold Time <sup>(3)</sup>	0	—	0	—	0	—	ns
t <sub>wz</sub>	Write Enable to Output in High-Z <sup>(1,2)</sup>	—	15	—	15	—	30	ns
t <sub>ow</sub>	Output Active from End-of-Write <sup>(1,2)</sup>	0	—	0	—	0	—	ns

3026 tbl 10

**NOTES:**

1. Transition is measured 0mV from Low or High-impedance voltage with Output Test Load (Figure 2).
2. This parameter is guaranteed by device characterization but is not production tested.
3. The specification for t<sub>dh</sub> must be met by the device supplying write data to the RAM under all operating conditions. Although t<sub>dh</sub> and t<sub>ow</sub> values will vary over voltage and temperature, the actual t<sub>dh</sub> will always be smaller than the actual t<sub>ow</sub>.
4. 'X' in part numbers indicates power rating (S or L).

Timing Waveform of Write Cycle No. 1, ( $R/\overline{W}$  Controlled Timing)<sup>(1,5,8)</sup>

3026 drw 08

Timing Waveform of Write Cycle No. 2, ( $\overline{CE}$  Controlled Timing)<sup>(1,5)</sup>

3026 drw 09

NOTES:

1.  $R/\overline{W}$  or  $\overline{CE}$  must be HIGH during all address transitions.
2. A write occurs during the overlap ( $t_{EW}$  or  $t_{WP}$ ) of  $\overline{CE} = V_{IL}$  and  $R/\overline{W} = V_{IL}$ .
3.  $t_{WR}$  is measured from the earlier of  $\overline{CE}$  or  $R/\overline{W}$  going HIGH to the end of the write cycle.
4. During this period, the I/O pins are in the output state and input signals must not be applied.
5. If the  $\overline{CE}$  LOW transition occurs simultaneously with or after the  $R/\overline{W}$  LOW transition, the outputs remain in the High-impedance state.
6. Timing depends on which enable signal ( $\overline{CE}$  or  $R/\overline{W}$ ) is asserted last.
7. This parameter is determined to be device characterization, but is not production tested. Transition is measured 0mV from steady state with the Output Test Load (Figure 2).
8. If  $\overline{OE}$  is LOW during a  $R/\overline{W}$  controlled write cycle, the write pulse width must be the larger of  $t_{WP}$  or  $(t_{WZ} + t_{OW})$  to allow the I/O drivers to turn off data to be placed on the bus for the required  $t_{OW}$ . If  $\overline{OE}$  is HIGH during a  $R/\overline{W}$  controlled write cycle, this requirement does not apply and the write pulse can be as short as the specified  $t_{WP}$ .

3026 tbl 15

NOTES:

1. Pins  $\overline{BUSY}_L$  and  $\overline{BUSY}_R$  are both outputs.  $\overline{BUSY}_x$  outputs on the IDT71V321 are totem-pole.
2. 'L' if the inputs to the opposite port were stable prior to the address and enable inputs of this port. 'H' if the inputs to the opposite port became stable after the address and enable inputs of this port. If t<sub>APS</sub> is not met, either  $\overline{BUSY}_L$  or  $\overline{BUSY}_R = LOW$  will result.  $\overline{BUSY}_L$  and  $\overline{BUSY}_R$  outputs cannot be LOW simultaneously.
3. Writes to the left port are internally ignored when  $\overline{BUSY}_L$  outputs are driving LOW regardless of actual logic level on the pin. Writes to the right port are internally ignored when  $\overline{BUSY}_R$  outputs are driving LOW regardless of actual logic level on the pin.

## Functional Description

The IDT71V321 provides two ports with separate control, address and I/O pins that permit independent access for reads or writes to any location in memory. The IDT71V321 has an automatic power down feature controlled by  $\overline{CE}$ . The  $\overline{CE}$  controls on-chip power down circuitry that permits the respective port to go into a standby mode when not selected ( $\overline{CE} = V_{IH}$ ). When a port is enabled, access to the entire memory array is permitted.

## Interrupts

If the user chooses the interrupt function, a memory location (mail box or message center) is assigned to each port. The left port interrupt flag ( $\overline{INTL}$ ) is asserted when the right port writes to memory location 7FE (HEX), where a write is defined as the  $\overline{CE}_R = R/\overline{W}_R = V_{IL}$  per Truth Table II. The left port clears the interrupt by accessing address location 7FE when  $\overline{CE}_L = \overline{OE}_L = V_{IL}$ ,  $R/W$  is a "don't care". Likewise, the right port interrupt flag ( $\overline{INTR}$ ) is asserted when the left port writes to memory location 7FF (HEX) and to clear the interrupt flag ( $\overline{INTR}$ ), the right port must access the memory location 7FF. The message (8 bits) at 7FE or 7FF is user-defined, since it is an addressable SRAM location. If the interrupt function is not used, address locations 7FE and 7FF are not used as mail boxes, but as part of the random access memory. Refer to Truth Table II for the interrupt operation.

## Busy Logic

Busy Logic provides a hardware indication that both ports of the RAM have accessed the same location at the same time. It also allows one of the two accesses to proceed and signals the other side that the RAM is "Busy". The  $\overline{BUSY}$  pin can then be used to stall the access until the operation on the other side is completed. If a write operation has been attempted from the side that receives a busy indication, the write signal is gated internally to prevent the write from proceeding.

The use of  $\overline{BUSY}$  Logic is not required or desirable for all applications. In some cases it may be useful to logically OR the  $\overline{BUSY}$  outputs together and use any  $\overline{BUSY}$  indication as an interrupt source to flag the event of an illegal or illogical operation.

## Depth Expansion

The  $\overline{BUSY}$  arbitration, is based on the chip enable and address signals only. It ignores whether an access is a read or write.

The  $\overline{BUSY}$  outputs on the IDT71V321 are totem-pole type outputs and do not require pull-up resistors to operate. If these RAMs are being expanded in depth, then the  $\overline{BUSY}$  indication for the resulting array requires the use of an external AND gate

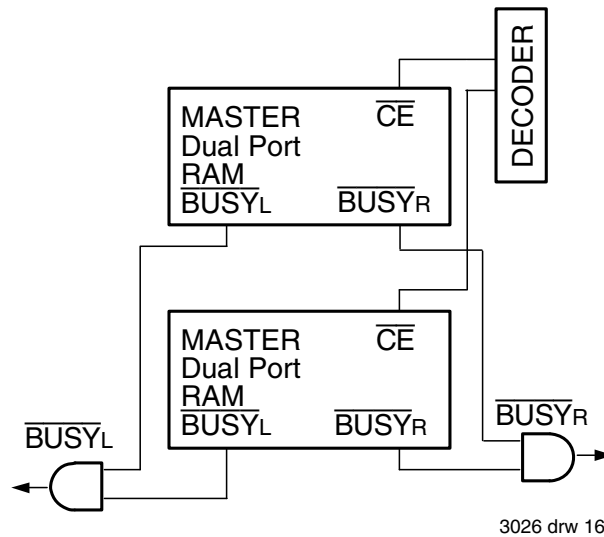

Figure 3. Busy and chip enable routing for depth expansion with IDT71V321.

### Ordering Information

3026 drw 17

**NOTES:**

- Contact your sales office Industrial temperature range is available for selected speeds, packages and powers.  
LEAD FINISH (SnPb) parts are Obsolete. Product Discontinuation Notice - PDN# SP-17-02  
Note that information regarding recently obsoleted parts are included in this datasheet for customer convenience.

### Orderable Part Information

Speed (ns)	Orderable Part ID	Pkg. Code	Pkg. Type	Temp. Grade
25	71V321L25JG	PLG52	PLCC	C
	71V321L25JG8	PLG52	PLCC	C
	71V321L25PFG	PNG64	TQFP	C

## Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
  - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
  - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

(Rev.4.0-1 November 2017)
