

128K X 36, 3.3V Synchronous IDT71V547S/XS SRAM with ZBT™ Feature, Burst Counter and Flow-Through Outputs

Features

- ◆ 128K x 36 memory configuration, flow-through outputs
- ◆ Supports high performance system speed - 95 MHz (8ns Clock-to-Data Access)
- ◆ ZBT™ Feature - No dead cycles between write and read cycles
- ◆ Internally synchronized signal eliminates the need to control \overline{OE}
- ◆ Single R/\overline{W} (READ/WRITE) control pin
- ◆ 4-word burst capability (Interleaved or linear)
- ◆ Individual byte write ($\overline{BW}_1 - \overline{BW}_4$) control (May tie active)
- ◆ Three chip enables for simple depth expansion
- ◆ Single 3.3V power supply ($\pm 5\%$)
- ◆ Packaged in a JEDEC standard 100-pin TQFP package

Functional Block Diagram

3822 drw 01

Description

The IDT71V547 is a 3.3V high-speed 4,718,592-bit (4.5 Megabit) synchronous SRAM organized as 128K x 36 bits. It is designed to eliminate dead bus cycles when turning the bus around between reads and writes, or writes and reads. Thus it has been given the name ZBT™, or Zero Bus Turn-around.

Address and control signals are applied to the SRAM during one clock cycle, and on the next clock cycle, its associated data cycle occurs, be it read or write.

The IDT71V547 contains address, data-in and control signal registers. The outputs are flow-through (no output data register). Output enable is the only asynchronous signal and can be used to disable the outputs at any given time.

A Clock Enable ($\overline{\text{CEN}}$) pin allows operation of the IDT71V547 to be suspended as long as necessary. All synchronous inputs are ignored when $\overline{\text{CEN}}$ is high and the internal device registers will hold their previous values.

There are three chip enable pins ($\overline{\text{CE1}}$, CE2 , $\overline{\text{CE2}}$) that allow the user to deselect the device when desired. If any one of these three is not active when $\text{ADV}/\overline{\text{LD}}$ is low, no new memory operation can be initiated and any burst in progress is stopped. However, any pending data transfers (reads or writes) will be completed. The data bus will tri-state one cycle after the chip was deselected or write initiated.

The IDT71V547 has an on-chip burst counter. In the burst mode, the IDT71V547 can provide four cycles of data for a single address presented to the SRAM. The order of the burst sequence is defined by the $\overline{\text{LBO}}$ input pin. The $\overline{\text{LBO}}$ pin selects between linear and interleaved burst sequence. The $\text{ADV}/\overline{\text{LD}}$ signal is used to load a new external address ($\text{ADV}/\overline{\text{LD}} = \text{LOW}$) or increment the internal burst counter ($\text{ADV}/\overline{\text{LD}} = \text{HIGH}$).

The IDT71V547 SRAM utilizes IDT's high-performance, high-volume 3.3V CMOS process, and is packaged in a JEDEC Standard 14mm x 20mm 100-pin thin plastic quad flatpack (TQFP) for high board density.

Pin Description Summary

A0 - A16	Address Inputs	Input	Synchronous
$\overline{\text{CE1}}$, CE2 , $\overline{\text{CE2}}$	Three Chip Enables	Input	Synchronous
$\overline{\text{OE}}$	Output Enable	Input	Asynchronous
R/ $\overline{\text{W}}$	Read/Write Signal	Input	Synchronous
$\overline{\text{CEN}}$	Clock Enable	Input	Synchronous
$\overline{\text{BW1}}$, $\overline{\text{BW2}}$, $\overline{\text{BW3}}$, $\overline{\text{BW4}}$	Individual Byte Write Selects	Input	Synchronous
CLK	Clock	Input	N/A
ADV/ $\overline{\text{LD}}$	Advance Burst Address / Load New Address	Input	Synchronous
$\overline{\text{LBO}}$	Linear / Interleaved Burst Order	Input	Static
I/O0 - I/O31, I/OP1 - I/OP4	Data Input/Output	I/O	Synchronous
VDD	3.3V Power	Supply	Static
VSS	Ground	Supply	Static

3822 tbl 01

Pin Definitions⁽¹⁾

Symbol	Pin Function	I/O	Active	Description
A ₀ - A ₁₆	Address Inputs	I	N/A	Synchronous Address inputs. The address register is triggered by a combination of the rising edge of CLK, ADV/LD Low, CEN Low and true chip enables.
ADV/LD	Address/Load	I	N/A	ADV/LD is a synchronous input that is used to load the internal registers with new address and control when it is sampled low at the rising edge of clock with the chip selected. When ADV/LD is low with the chip deselected, any burst in progress is terminated. When ADV/LD is sampled high then the internal burst counter is advanced for any burst that was in progress. The external addresses are ignored when ADV/LD is sampled high.
R/W	Read/Write	I	N/A	R/W signal is a synchronous input that identifies whether the current load cycle initiated is a Read or Write access to the memory array. The data bus activity for the current cycle takes place one clock cycle later.
CEN	Clock Enable	I	LOW	Synchronous Clock Enable Input. When CEN is sampled high, all other synchronous inputs, including clock are ignored and outputs remain unchanged. The effect of CEN sampled high on the device outputs is as if the low to high clock transition did not occur. For normal operation, CEN must be sampled low at rising edge of clock.
BW ₁ - BW ₄	Individual Byte Write Enables	I	LOW	Synchronous byte write enables. Enable 9-bit byte has its own active low byte write enable. On load write cycles (When R/W and ADV/LD are sampled low) the appropriate byte write signal (BW ₁ - BW ₄) must be valid. The byte write signal must also be valid on each cycle of a burst write. Byte Write signals are ignored when R/W is sampled high. The appropriate byte(s) of data are written into the device one cycle later. BW ₁ - BW ₄ can all be tied low if always doing write to the entire 36-bit word.
CE ₁ , CE ₂	Chip Enables	I	LOW	Synchronous active low chip enable. CE ₁ and CE ₂ are used with CE ₂ to enable the IDT71V547. (CE ₁ or CE ₂ sampled high or CE ₂ sampled low) and ADV/LD low at the rising edge of clock, initiates a deselect cycle. This device has a one cycle deselect, i.e., the data bus will tri-state one clock cycle after deselect is initiated.
CE2	Chip Enable	I	HIGH	Synchronous active high chip enable. CE2 is used with CE ₁ and CE ₂ to enable the chip. CE2 has inverted polarity but otherwise identical to CE ₁ and CE ₂ .
CLK	Clock	I	N/A	This is the clock input to the IDT71V547. Except for OE, all timing references for the device are made with respect to the rising edge of CLK.
I/O ₀ - I/O ₃₁ I/OP ₁ - I/OP ₄	Data Input/Output	I/O	N/A	Data input/output (I/O) pins. The data input path is registered, triggered by the rising edge of CLK. The data output path is flow-through (no output register).
LBO	Linear Burst Order	I	LOW	Burst order selection input. When LBO is high the Interleaved burst sequence is selected. When LBO is low the Linear burst sequence is selected. LBO is a static DC input.
OE	Output Enable	I	LOW	Asynchronous output enable. OE must be low to read data from the 71V547. When OE is high the I/O pins are in a high-impedance state. OE does not need to be actively controlled for read and write cycles. In normal operation, OE can be tied low.
VDD	Power Supply	N/A	N/A	3.3V power supply input.
VSS	Ground	N/A	N/A	Ground pin.

3822 tbl 02

NOTE:

1. All synchronous inputs must meet specified setup and hold times with respect to CLK.

Recommended Operating Temperature and Supply Voltage

Grade	Temperature	V _{SS}	V _{DD}
Commercial	0°C to +70°C	0V	3.3V±5%
Industrial	-40°C to +85°C	0V	3.3V±5%

3822 tbl 03

Recommended DC Operating Conditions

Symbol	Parameter	Min.	Typ.	Max.	Unit
V _{DD}	Supply Voltage	3.135	3.3	3.465	V
V _{SS}	Ground	0	0	0	V
V _{IH}	Input High Voltage - Inputs	2.0	—	4.6	V
V _{IH}	Input High Voltage - I/O	2.0	—	V _{DD} +0.3 ⁽²⁾	V
V _{IL}	Input Low Voltage	-0.5 ⁽¹⁾	—	0.8	V

3822 tbl 04

NOTES:

- V_{IL} (min.) = -1.0V for pulse width less than tcyc/2, once per cycle.
- V_{IH} (max.) = +6.0V for pulse width less than tcyc/2, once per cycle.

Capacitance

(T_A = +25°C, f = 1.0MHz, TQFP package)

Symbol	Parameter ⁽¹⁾	Conditions	Max.	Unit
C _{IN}	Input Capacitance	V _{IN} = 3dV	5	pF
C _{I/O}	I/O Capacitance	V _{OUT} = 3dV	7	pF

3822 tbl 06

NOTE:

- This parameter is guaranteed by device characterization, but not production tested.

Absolute Maximum Ratings⁽¹⁾

Symbol	Rating	Value	Unit
V _{TERM} ⁽²⁾	Supply Voltage on V _{DD} with Respect to GND	-0.5 to +3.6	V
V _{TERM} ⁽³⁾	DC Input Voltage ⁽⁵⁾	-0.5 to V _{DDQ} +0.5	V
V _{TERM} ⁽⁴⁾	DC Voltage Applied to Outputs in High-Z State ⁽⁵⁾	-0.5 to V _{DDQ} +0.5	V
T _A	Operating Temperature	0°C to 70°C	°C
T _{BIAS}	Ambient Temperature with Power Applied (Temperature Under Bias)	-55 to +125	°C
T _{STG}	Storage Temperature	-65 to +150	°C
I _{OUT}	Current into Outputs (Low)	20	mA
V _{ESD}	Static Discharge Voltage (per MIL-STD-883, Method 3015)	>2001	V
I _{LU}	Latch-Up Current	>200	mA

NOTES:

5284 tbl 05

- Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
- V_{DD} and Input terminals only.
- I/O terminals.

Pin Configuration

**Top View
TQFP**

3822 drw 02

NOTES:

1. Pin 14 does not have to be connected directly to Vss as long as the input voltage is $\leq V_{IL}$.
2. Pins 83 and 84 are reserved for future A17 (8M) and A18 (16M) respectively.

Synchronous Truth Table⁽¹⁾

\overline{CEN}	R/ \overline{W}	Chip ⁽⁵⁾ Enable	ADV/ \overline{LD}	\overline{BW}_x	ADDRESS USED	PREVIOUS CYCLE	CURRENT CYCLE	I/O (1 cycle later)
L	L	Select	L	Valid	External	X	LOAD WRITE	D ⁽⁷⁾
L	H	Select	L	X	External	X	LOAD READ	Q ⁽⁷⁾
L	X	X	H	Valid	Internal	LOAD WRITE/ BURST WRITE	BURST WRITE (Advance Burst Counter) ⁽²⁾	D ⁽⁷⁾
L	X	X	H	X	Internal	LOAD READ/ BURST READ	BURST READ (Advance Burst Counter) ⁽²⁾	Q ⁽⁷⁾
L	X	Deselect	L	X	X	X	DESELECT or STOP ⁽³⁾	HiZ
L	X	X	H	X	X	DESELECT / NOOP	NOOP	HiZ
H	X	X	X	X	X	X	SUSPEND ⁽⁴⁾	Previous Value

3822 tbl 07

NOTES:

- L = V_{IL}, H = V_{IH}, X = Don't Care.
- When ADV/ \overline{LD} signal is sampled high, the internal burst counter is incremented. The R/ \overline{W} signal is ignored when the counter is advanced. Therefore the nature of the burst cycle (Read or Write) is determined by the status of the R/ \overline{W} signal when the first address is loaded at the beginning of the burst cycle.
- Deselect cycle is initiated when either (\overline{CE}_1 , or \overline{CE}_2 is sampled high or CE2 is sampled low) and ADV/ \overline{LD} is sampled low at rising edge of clock. The data bus will tri-state one cycle after deselect is initiated.
- When \overline{CEN} is sampled high at the rising edge of clock, that clock edge is blocked from propagating through the part. The state of all the internal registers and the I/Os remains unchanged.
- To select the chip requires $\overline{CE}_1 = L$, $\overline{CE}_2 = L$ and CE2 = H on these chip enable pins. The chip is deselected if either one of the chip enable is false.
- Device Outputs are ensured to be in High-Z during device power-up.
- Q - data read from the device, D - data written to the device.

Partial Truth Table for Writes⁽¹⁾

Operation	R/ \overline{W}	\overline{BW}_1	\overline{BW}_2	\overline{BW}_3	\overline{BW}_4
READ	H	X	X	X	X
WRITE ALL BYTES	L	L	L	L	L
WRITE BYTE 1 (I/O [0:7], I/OP1) ⁽²⁾	L	L	H	H	H
WRITE BYTE 2 (I/O [8:15], I/OP2) ⁽²⁾	L	H	L	H	H
WRITE BYTE 3 (I/O [16:23], I/OP3) ⁽²⁾	L	H	H	L	H
WRITE BYTE 4 (I/O [24:31], I/OP4) ⁽²⁾	L	H	H	H	L
NO WRITE	L	H	H	H	H

3822 tbl 08

NOTES:

- L = V_{IL}, H = V_{IH}, X = Don't Care.
- Multiple bytes may be selected during the same cycle.

Interleaved Burst Sequence Table ($\overline{\text{LBO}}=\text{VDD}$)

	Sequence 1		Sequence 2		Sequence 3		Sequence 4	
	A1	A0	A1	A0	A1	A0	A1	A0
First Address	0	0	0	1	1	0	1	1
Second Address	0	1	0	0	1	1	1	0
Third Address	1	0	1	1	0	0	0	1
Fourth Address ⁽¹⁾	1	1	1	0	0	1	0	0

3822 tbl 09

NOTE:

1. Upon completion of the Burst sequence the counter wraps around to its initial state and continues counting.

Linear Burst Sequence Table ($\overline{\text{LBO}}=\text{VSS}$)

	Sequence 1		Sequence 2		Sequence 3		Sequence 4	
	A1	A0	A1	A0	A1	A0	A1	A0
First Address	0	0	0	1	1	0	1	1
Second Address	0	1	1	0	1	1	0	0
Third Address	1	0	1	1	0	0	0	1
Fourth Address ⁽¹⁾	1	1	0	0	0	1	1	0

3822 tbl 10

NOTE:

1. Upon completion of the Burst sequence the counter wraps around to its initial state and continues counting.

Functional Timing Diagram⁽¹⁾

3822 drw 03

NOTE:

1. This assumes $\overline{\text{CEN}}$, $\overline{\text{CE1}}$, CE2 and $\overline{\text{CE2}}$ are all true.
2. All Address, Control and Data_In are only required to meet set-up and hold time with respect to the rising edge of clock. Data_Out is valid after a clock-to-data delay from the rising edge of clock.

I _{LO}	Output Leakage Current	$\overline{\text{CE}} \geq V_{IH}$ or $\overline{\text{OE}} \geq V_{IH}$, V _{OUT} = 0V to V _{DD} , V _{DD} = Max.	—	5	μA
V _{OL}	Output Low Voltage	I _{OL} = 5mA, V _{DD} = Min.	—	0.4	V
V _{OH}	Output High Voltage	I _{OH} = -5mA, V _{DD} = Min.	2.4	—	V

3822 tbl 20

NOTE:

- The $\overline{\text{LBO}}$ pin will be internally pulled to V_{DD} if it is not actively driven in the application.

DC Electrical Characteristics Over the Operating Temperature and Supply Voltage Range⁽¹⁾ (V_{DD} = 3.3V +/-5%, V_{HD} = V_{DD}-0.2V, V_{LD} = 0.2V)

Symbol	Parameter	Test Conditions	S80		S85		S90		S100		Unit
			Com'l	Ind	Com'l	Ind	Com'l	Ind	Com'l	Ind	
I _{DD}	Operating Power Supply Current	Device Selected, Outputs Open, ADV/ $\overline{\text{LD}}$ = X, V _{DD} = Max., V _{IN} ≥ V _{IH} or ≤ V _{IL} , f = f _{MAX} ⁽²⁾	250	260	225	235	225	235	200	210	mA
ISB1	CMOS Standby Power Supply Current	Device Deselected, Outputs Open, V _{DD} = Max., V _{IN} ≥ V _{HD} or ≤ V _{LD} , f = 0 ⁽²⁾	40	45	40	45	40	45	40	45	mA
ISB2	Clock Running Power Supply Current	Device Deselected, Outputs Open, V _{DD} = Max., V _{IN} ≥ V _{HD} or ≤ V _{LD} , f = f _{MAX} ⁽²⁾	100	110	95	105	95	105	90	100	mA
ISB3	Idle Power Supply Current	Device Selected, Outputs Open, $\overline{\text{CEN}} \geq V_{IH}$, V _{DD} = Max., V _{IN} ≥ V _{HD} or ≤ V _{LD} , f = f _{MAX} ⁽²⁾	40	45	40	45	40	45	40	45	mA

3822 tbl 21

NOTES:

- All values are maximum guaranteed values.
- At f = f_{MAX}, inputs are cycling at the maximum frequency of read cycles of 1/t_{cy}; f=0 means no input lines are changing.

t _{HB}	Byte Write Enable (BWx) Hold Time	0.5	—	0.5	—	0.5	—	0.5	—	ns

3822 tbl 23

NOTES:

1. Measured as HIGH above 2.0V and LOW below 0.8V.
2. Transition is measured ±200mV from steady-state.
3. These parameters are guaranteed with the AC load (Figure 1) by device characterization. They are not production tested.
4. To avoid bus contention, the output buffers are designed such that t_{CHZ} (device turn-off) is about 2 ns faster than t_{CLZ} (device turn-on) at a given temperature and voltage. The specs as shown do not imply bus contention because t_{CLZ} is a Min. parameter that is worse case at totally different test conditions (0 deg. C, 3.465V) than t_{CHZ}, which is a Max. parameter (worse case at 70 deg. C, 3.135V).

Timing Waveform of Read Cycle (1, 2, 3, 4)

3822 drw 06

NOTES:

1. Q (A1) represents the first output from the external address A1. Q (A2) represents the first output from the external address A2; Q (A2+1) represents the next output data in the burst sequence of the base address A2, etc. where address bits A0 and A1 are advancing for the four word burst in the sequence defined by the state of the \overline{LBO} input.
2. CE2 timing transitions are identical but inverted to the $\overline{CE1}$ and $\overline{CE2}$ signals. For example, when $\overline{CE1}$ and $\overline{CE2}$ are LOW on this waveform, CE2 is HIGH.
3. Burst ends when new address and control are loaded into the SRAM by sampling ADV/LD LOW.
4. \overline{RW} is don't care when the SRAM is bursting (ADV/LD sampled HIGH). The nature of the burst access (Read or Write) is fixed by the state of the \overline{RW} signal when new address and control are loaded into the SRAM.

Timing Waveform of Write Cycles^(1,2,3,4,5)

3822 drw 07

NOTES:

1. D(A1) represents the first input to the external address A1. D(A2) represents the first input to the external address A2; D(A2+1) represents the next input data in the burst sequence of the base address A2, etc. where address bits A0 and A1 are advancing for the four word burst in the sequence defined by the state of the LBO input.
2. CE2 timing transitions are identical but inverted to the CE1 and CE2 signals. For example, when CE1 and CE2 are LOW on this waveform, CE2 is HIGH.
3. Burst ends when new address and control are loaded into the SRAM by sampling ADV/LD LOW.
4. R/W is don't care when the SRAM is bursting (ADV/LD sampled HIGH). The nature of the burst access (Read or Write) is fixed by the state of the R/W signal when new address and control are loaded into the SRAM.
5. Individual Byte Write signals (BWx) must be valid on all write and burst-write cycles. A write cycle is initiated when R/W signal is sampled LOW. The byte write information comes in one cycle before the actual data is presented to the SRAM.

Timing Waveform of Combined Read and Write Cycles^(1,2,3)

3822 drw 08

NOTES:

1. Q(A1) represents the first output from the external address A1. D(A2) represents the input data to the SRAM corresponding to address A2.
2. CE2 timing transitions are identical but inverted to the CE1 and CE2 signals. For example, when CE1 and CE2 are LOW on this waveform, CE2 is HIGH.
3. Individual Byte Write signals (BWx) must be valid on all write and burst-write cycles. A write cycle is initiated when RW signal is sampled LOW. The byte write information comes in one cycle before the actual data is presented to the SRAM.

Timing Waveform of $\overline{\text{CEN}}$ Operation^(1,2,3,4)

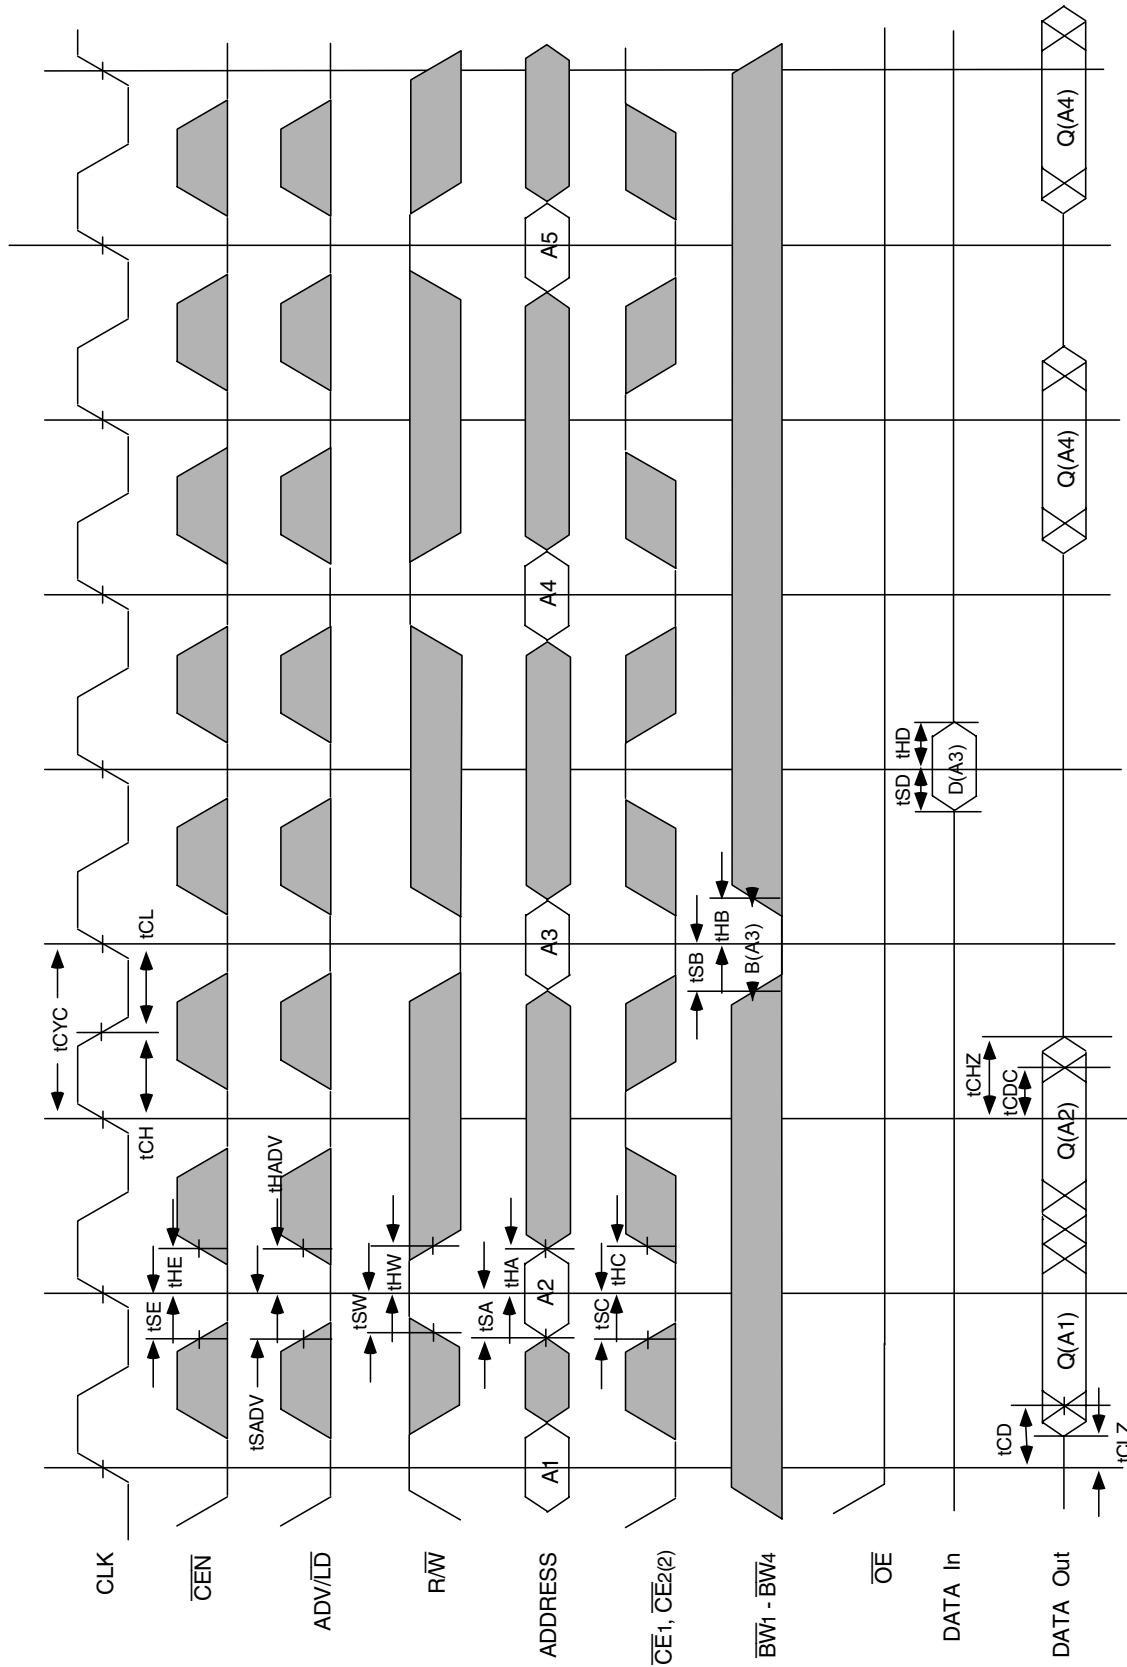

3822 drw 09

NOTES:

1. Q(A1) represents the first output from the external address A1. D(A2) represents the input data to the SRAM corresponding to address A2.
2. CE2 timing transitions are identical but inverted to the $\overline{\text{CE1}}$ and $\overline{\text{CE2}}$ signals. For example, when $\overline{\text{CE1}}$ and $\overline{\text{CE2}}$ are LOW on this waveform, CE2 is HIGH.
3. $\overline{\text{CEN}}$ when sampled high on the rising edge of clock will block that L-H transition of the clock from propagating into the SRAM. The part will behave as if the L-H clock transition did not occur. All internal registers in the SRAM will retain their previous state.
4. Individual Byte Write signals ($\overline{\text{BWx}}$) must be valid on all write and burst-write cycles. A write cycle is initiated when $\overline{\text{RW}}$ signal is sampled LOW. The byte write information comes in one cycle before the actual data is presented to the SRAM.

Timing Waveform of \overline{CS} Operation^(1,2,3,4)

3822 drw 10

NOTES:

1. Q (A1) represents the first output from the external address A1. D (A3) represents the input data to the SRAM corresponding to address A3 etc.
2. CE2 timing transitions are identical but inverted to the $\overline{CE1}$ and $\overline{CE2}$ signals. For example, when $\overline{CE1}$ and $\overline{CE2}$ are LOW on this waveform, $\overline{CE2}$ is HIGH.
3. When either one of the Chip enables ($\overline{CE1}$, $\overline{CE2}$, $\overline{CE2}$) is sampled inactive at the rising clock edge, a deselect cycle is initiated. The data-bus tri-states one cycle after the initiation of the deselect cycle. This allows for any pending data transfers (reads or writes) to be completed.
4. Individual Byte Write signals (\overline{BWx}) must be valid on all write and burst-write cycles. A write cycle is initiated when \overline{RW} signal is sampled LOW. The byte write information comes in one cycle before the actual data is presented to the SRAM.

Timing Waveform of \overline{OE} Operation⁽¹⁾

3822 drw 11

NOTE:

1. A read operation is assumed to be in progress.

Ordering Information

PART NUMBER	t _{CD} PARAMETER	SPEED IN MEGAHERTZ	CLOCK CYCLE TIME
71V547S80PF	8 ns	95 MHz	10.5 ns
71V547S85PF	8.5 ns	90 MHz	11 ns
71V547S90PF	9 ns	83 MHz	12 ns
71V547S100PF	10 ns	66 MHz	15 ns

Datasheet Document History

6/15/99		Updated to new format
9/13/99	Pg. 11	Corrected ISB3 conditions
	Pg. 19	Added Datasheet Document History
12/31/99	Pp. 3, 11, 12, 18	Added Industrial Temperature range offerings
02/27/07	Pg. 18	Added X generation die step to data sheet ordering information
10/16/08	Pg. 18	Removed "IDT" from orderable part number
05/27/10	Pg. 17	Added "Restricted hazardous substance device" to the ordering information
02/23/15	Pg 1-3	Re-ordered the FBD, Pin Descriptions and Pin Definitions to make the reading flow better match the reading flow of our other datasheets
	Pg 5&19	PK100-1 changed to PK100 to match our package codes
	Pg 19	RoHS updated to Green, added Tape and Reel and removed die stepping from the Ordering Information

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
