

Features

- ◆ **64K x 32 memory configuration**
- ◆ **Supports high system speed:**
 - Commercial:*
 - A4 4.5ns clock access time (117 MHz)
 - Commercial and Industrial:*
 - 5 5ns clock access time (100 MHz)
 - 6 6ns clock access time (83 MHz)
 - 7 7ns clock access time (66 MHz)
- ◆ **Single-cycle deselect functionality (Compatible with Micron Part # MT58LC64K32D7LG-XX)**
- ◆ **LBO input selects interleaved or linear burst mode**
- ◆ **Self-timed write cycle with global write control (\overline{GW}), byte write enable (\overline{BWE}), and byte writes (\overline{BWx})**
- ◆ **Power down controlled by ZZ input**
- ◆ **Operates with a single 3.3V power supply (+10/-5%)**
- ◆ **Packaged in a JEDEC Standard 100-pin rectangular plastic thin quad flatpack (TQFP)**
- ◆ **Green parts available, see ordering information**

Description

The IDT71V632 is a 3.3V high-speed SRAM organized as 64K x 32 with full support of the Pentium™ and PowerPC™ processor interfaces. The pipelined burst architecture provides cost-effective 3-1-1-1 secondary cache performance for processors up to 117MHz.

The IDT71V632 SRAM contains write, data, address, and control registers. Internal logic allows the SRAM to generate a self-timed write based upon a decision which can be left until the extreme end of the write cycle.

The burst mode feature offers the highest level of performance to the system designer, as the IDT71V632 can provide four cycles of data for a single address presented to the SRAM. An internal burst address counter accepts the first cycle address from the processor, initiating the access sequence. The first cycle of output data will be pipelined for one cycle before it is available on the next rising clock edge. If burst mode operation is selected (\overline{ADV} =LOW), the subsequent three cycles of output data will be available to the user on the next three rising clock edges. The order of these three addresses will be defined by the internal burst counter and the \overline{LBO} input pin.

The IDT71V632 SRAM utilizes IDT's high-performance, high-volume 3.3V CMOS process, and is packaged in a JEDEC Standard 14mm x 20mm 100-pin thin plastic quad flatpack (TQFP) for optimum board density in both desktop and notebook applications.

Pin Description Summary

A0–A15	Address Inputs	Input	Synchronous
\overline{CE}	Chip Enable	Input	Synchronous
CS ₀ , \overline{CS}_1	Chips Selects	Input	Synchronous
\overline{OE}	Output Enable	Input	Asynchronous
\overline{GW}	Global Write Enable	Input	Synchronous
\overline{BWE}	Byte Write Enable	Input	Synchronous
\overline{BW}_1 , \overline{BW}_2 , \overline{BW}_3 , \overline{BW}_4	Individual Byte Write Selects	Input	Synchronous
CLK	Clock	Input	N/A
\overline{ADV}	Burst Address Advance	Input	Synchronous
\overline{ADSC}	Address Status (Cache Controller)	Input	Synchronous
\overline{ADSP}	Address Status (Processor)	Input	Synchronous
\overline{LBO}	Linear / Interleaved Burst Order	Input	DC
ZZ	Sleep Mode	Input	Asynchronous
I/O ₀ –I/O ₃₁	Data Input/Output	I/O	Synchronous
V _{DD} , V _{DDQ}	3.3V	Power	N/A
V _{SS} , V _{SSQ}	Array Ground, I/O Ground	Power	N/A

Pin Definitions⁽¹⁾

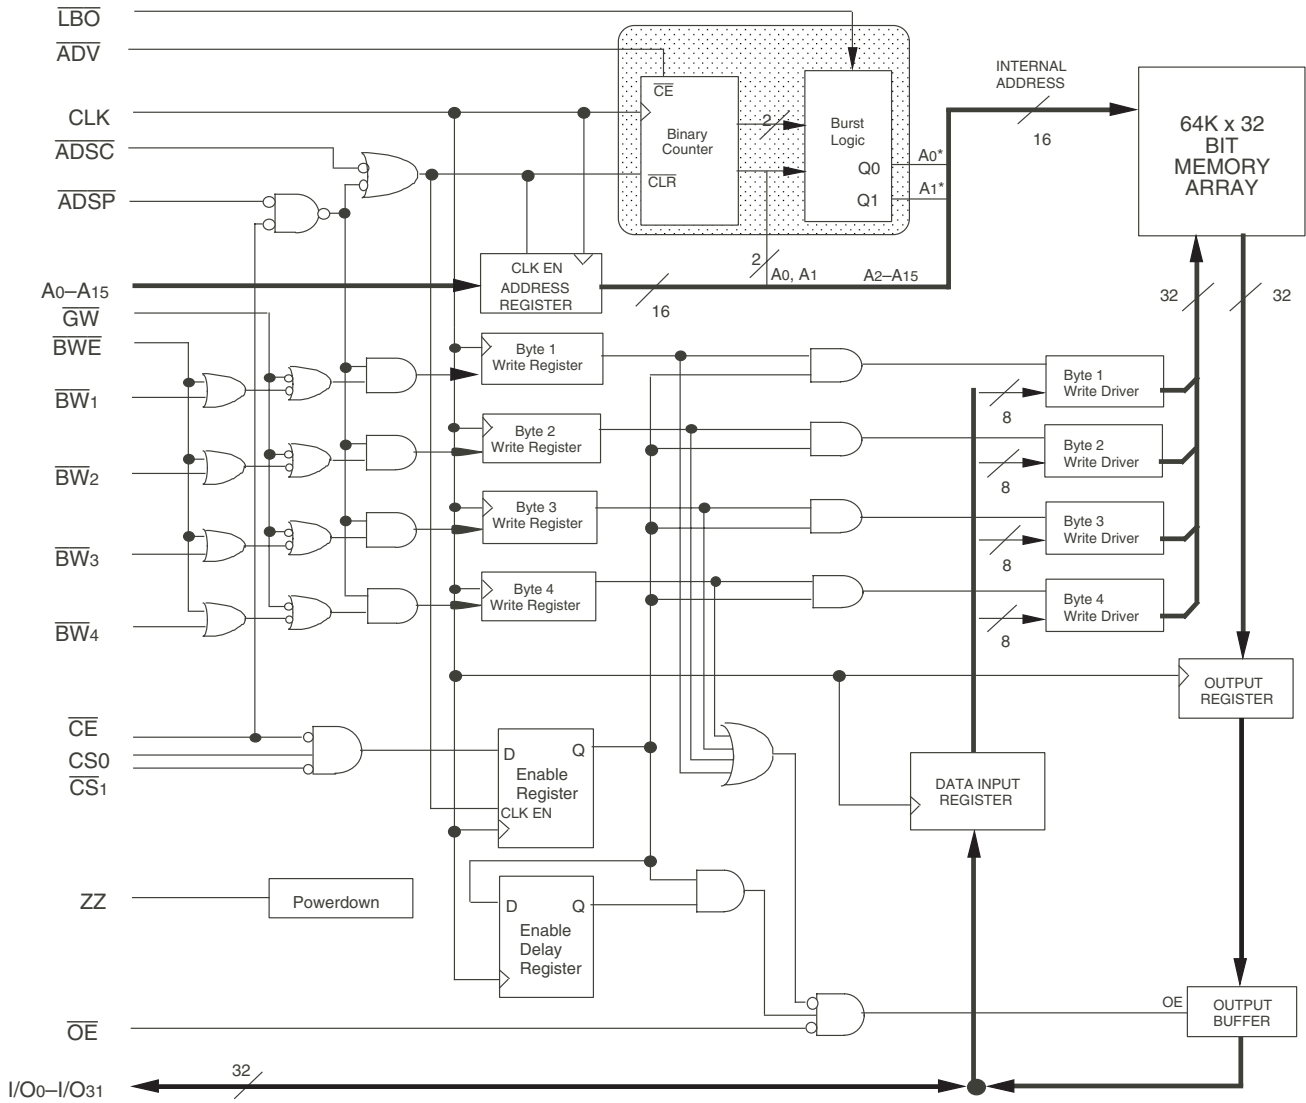

Symbol	Pin Function	I/O	Active	Description
A0–A15	Address Inputs	I	N/A	Synchronous Address inputs. The address register is triggered by a combination of the rising edge of CLK and $\overline{\text{ADSC}}$ Low or $\overline{\text{ADSP}}$ Low and $\overline{\text{CE}}$ Low.
$\overline{\text{ADSC}}$	Address Status (Cache Controller)	I	LOW	Synchronous Address Status from Cache Controller. $\overline{\text{ADSC}}$ is an active LOW input that is used to load the address registers with new addresses. $\overline{\text{ADSC}}$ is NOT GATED by $\overline{\text{CE}}$.
$\overline{\text{ADSP}}$	Address Status (Processor)	I	LOW	Synchronous Address Status from Processor. $\overline{\text{ADSP}}$ is an active LOW input that is used to load the address registers with new addresses. $\overline{\text{ADSP}}$ is gated by $\overline{\text{CE}}$.
$\overline{\text{ADV}}$	Burst Address Advance	I	LOW	Synchronous Address Advance. $\overline{\text{ADV}}$ is an active LOW input that is used to advance the internal burst counter, controlling burst access after the initial address is loaded. When this input is HIGH the burst counter is not incremented; that is, there is no address advance.
$\overline{\text{BWE}}$	Byte Write Enable	I	LOW	Synchronous byte write enable gates the byte write inputs $\overline{\text{BW1}}\text{--}\overline{\text{BW4}}$. If $\overline{\text{BWE}}$ is LOW at the rising edge of CLK then $\overline{\text{BWx}}$ inputs are passed to the next stage in the circuit. A byte write can still be blocked if $\overline{\text{ADSP}}$ is LOW at the rising edge of CLK. If $\overline{\text{ADSP}}$ is HIGH and $\overline{\text{BWx}}$ is LOW at the rising edge of CLK then data will be written to the SRAM. If $\overline{\text{BWE}}$ is HIGH then the byte write inputs are blocked and only $\overline{\text{GW}}$ can initiate a write cycle.
$\overline{\text{BW1}}\text{--}\overline{\text{BW4}}$	Individual Byte Write Enables	I	LOW	Synchronous byte write enables. $\overline{\text{BW1}}$ controls I/O(7:0), $\overline{\text{BW2}}$ controls I/O(15:8), etc. Any active byte write causes all outputs to be disabled. $\overline{\text{ADSP}}$ LOW disables all byte writes. $\overline{\text{BW1}}\text{--}\overline{\text{BW4}}$ must meet specified setup and hold times with respect to CLK.
$\overline{\text{CE}}$	Chip Enable	I	LOW	Synchronous chip enable. $\overline{\text{CE}}$ is used with CS_0 and $\overline{\text{CS}}_1$ to enable the IDT71V632. $\overline{\text{CE}}$ also gates $\overline{\text{ADSP}}$.
CLK	Clock	I	N/A	This is the clock input. All timing references for the device are made with respect to this input.
CS_0	Chip Select 0	I	HIGH	Synchronous active HIGH chip select. CS_0 is used with $\overline{\text{CE}}$ and $\overline{\text{CS}}_1$ to enable the chip.
$\overline{\text{CS}}_1$	Chip Select 1	I	LOW	Synchronous active LOW chip select. $\overline{\text{CS}}_1$ is used with $\overline{\text{CE}}$ and CS_0 to enable the chip.
$\overline{\text{GW}}$	Global Write Enable	I	LOW	Synchronous global write enable. This input will write all four 8-bit data bytes when LOW on the rising edge of CLK. $\overline{\text{GW}}$ supercedes individual byte write enables.
I/O ₀ –I/O ₃₁	Data Input/Output	I/O	N/A	Synchronous data input/output (I/O) pins. Both the data input path and data output path are registered and triggered by the rising edge of CLK.
$\overline{\text{LBO}}$	Linear Burst Order	I	LOW	Asynchronous burst order selection DC input. When $\overline{\text{LBO}}$ is HIGH the Interleaved (Intel) burst sequence is selected. When $\overline{\text{LBO}}$ is LOW the Linear (PowerPC) burst sequence is selected. $\overline{\text{LBO}}$ is a static DC input and must not change state while the device is operating.
$\overline{\text{OE}}$	Output Enable	I	LOW	Asynchronous output enable. When $\overline{\text{OE}}$ is LOW the data output drivers are enabled on the I/O pins if the chip is also selected. When $\overline{\text{OE}}$ is HIGH the I/O pins are in a high-impedance state.
V _{DD}	Power Supply	N/A	N/A	3.3V core power supply inputs.
V _{DDQ}	Power Supply	N/A	N/A	3.3V I/O power supply inputs.
V _{SS}	Ground	N/A	N/A	Core ground pins.
V _{SSQ}	Ground	N/A	N/A	I/O ground pins.
NC	No Connect	N/A	N/A	NC pins are not electrically connected to the chip.
ZZ	Sleep Mode	I	HIGH	Asynchronous sleep mode input. ZZ HIGH will gate the CLK internally and power down the IDT71V632 to its lowest power consumption level. Data retention is guaranteed in Sleep Mode.

NOTE:

3619 tbl 02

- All synchronous inputs must meet specified setup and hold times with respect to CLK.

Functional Block Diagram

Absolute Maximum Ratings⁽¹⁾

Symbol	Rating	Value	Unit
V _{TERM} ⁽²⁾	Terminal Voltage with Respect to GND	-0.5 to +4.6	V
V _{TERM} ⁽³⁾	Terminal Voltage with Respect to GND	-0.5 to V _{DD} +0.5	V
T _A	Operating Temperature	0 to +70	°C
T _{BIAS}	Temperature Under Bias	-55 to +125	°C
T _{STG}	Storage Temperature	-55 to +125	°C
P _T	Power Dissipation	1.0	W
I _{OUT}	DC Output Current	50	mA

3619 tbl 05

NOTES:

- Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
- V_{DD}, V_{DDQ} and Input terminals only.
- I/O terminals.

Capacitance

(T_A = +25°C, f = 1.0MHz, TQFP package)

Symbol	Parameter ⁽¹⁾	Conditions	Max.	Unit
C _{IN}	Input Capacitance	V _{IN} = 3dV	6	pF
C _{I/O}	I/O Capacitance	V _{OUT} = 3dV	7	pF

3619 tbl 06

NOTE:

- This parameter is guaranteed by device characterization, but not production tested.

Recommended Operating Temperature and Supply Voltage

Grade	Temperature	V _{SS}	V _{DD}	V _{DDQ}
Commercial	0°C to +70°C	0V	3.3V+10/-5%	3.3V+10/-5%
Industrial	-40°C to +85°C	0V	3.3V+10/-5%	3.3V+10/-5%

3619 tbl 03

Recommended DC Operating Conditions

Symbol	Parameter	Min.	Max.	Unit
V _{DD}	Core Supply Voltage	3.135	3.63	V
V _{DDQ}	I/O Supply Voltage	3.135	3.63	V
V _{SS} , V _{SSQ}	Ground	0	0	V
V _{IH}	Input High Voltage — Inputs	2.0	5.0 ⁽¹⁾	V
V _{IH}	Input High Voltage — I/O	2.0	V _{DDQ} +0.3 ⁽²⁾	V
V _{IL}	Input Low Voltage	-0.3 ⁽³⁾	0.8	V

3619 tbl 04

NOTES:

- V_{IH} (max) = 6.0V for pulse width less than t_{cy}/2, once per cycle.
- V_{IH} (max) = V_{DDQ} + 1.0V for pulse width less than t_{cy}/2, once per cycle.
- V_{IL} (min) = -1.0V for pulse width less than t_{cy}/2, once per cycle.

Pin Configuration

Top View TQFP

NOTES:

1. Pin 14 can either be directly connected to VDD or not connected.
2. Pin 64 can be left unconnected and the device will always remain in active mode.

3619 tbl 15

NOTES:

1. Measured as HIGH above 2.0V and LOW below 0.8V.
2. Transition is measured ± 200 mV from steady-state.
3. Device must be deselected when powered-up from sleep mode.
4. t_{CFG} is the minimum time required to configure the device based on the $\overline{\text{LBO}}$ input. $\overline{\text{LBO}}$ is a static input and must not change during normal operation.
5. The 71V632SA4 speed grade corresponds to a t_{cd} of 4.5ns.
6. 0°C to +70°C temperature range only.

Timing Waveform of Pipelined Read Cycle^(1,2)

3619 drw 06

NOTES:

1. O1 (Ax) represents the first output from the external address Ax. O1 (Ay) represents the first output from the external address Ay; O2 (Ay) represents the next output data in the burst sequence of the base address Ay, etc. where A0 and A1 are advancing for the four word burst in the sequence defined by the state of the LBO input.
2. Zz input is LOW and LBO is Don't Care for this cycle.
3. CS0 timing transitions are identical but inverted to the \overline{CE} and $\overline{CS1}$ signals. For example, when \overline{CE} and $\overline{CS1}$ are LOW on this waveform, CS0 is HIGH.

Timing Waveform of Combined Pipelined Read and Write Cycles^(1,2,3)

NOTES:

1. Device is selected through entire cycle; \overline{CE} and $\overline{CS1}$ are LOW, $\overline{CS0}$ is HIGH.
2. ZZ input is LOW and LBO is Don't Care for this cycle.
3. O1(Ax) represents the first output from the external address Ax. I1 (Ay) represents the first input from the external address Ay. O1(Az) represents the first output from the external address Az. O2(Az) represents the next output data in the burst sequence of the base address Az, etc. where A0 and A1 are advancing for the four word burst in the sequence defined by the state of the LBO input.

Timing Waveform of Write Cycle No. 1 — \overline{GW} Controlled^(1,2,3)

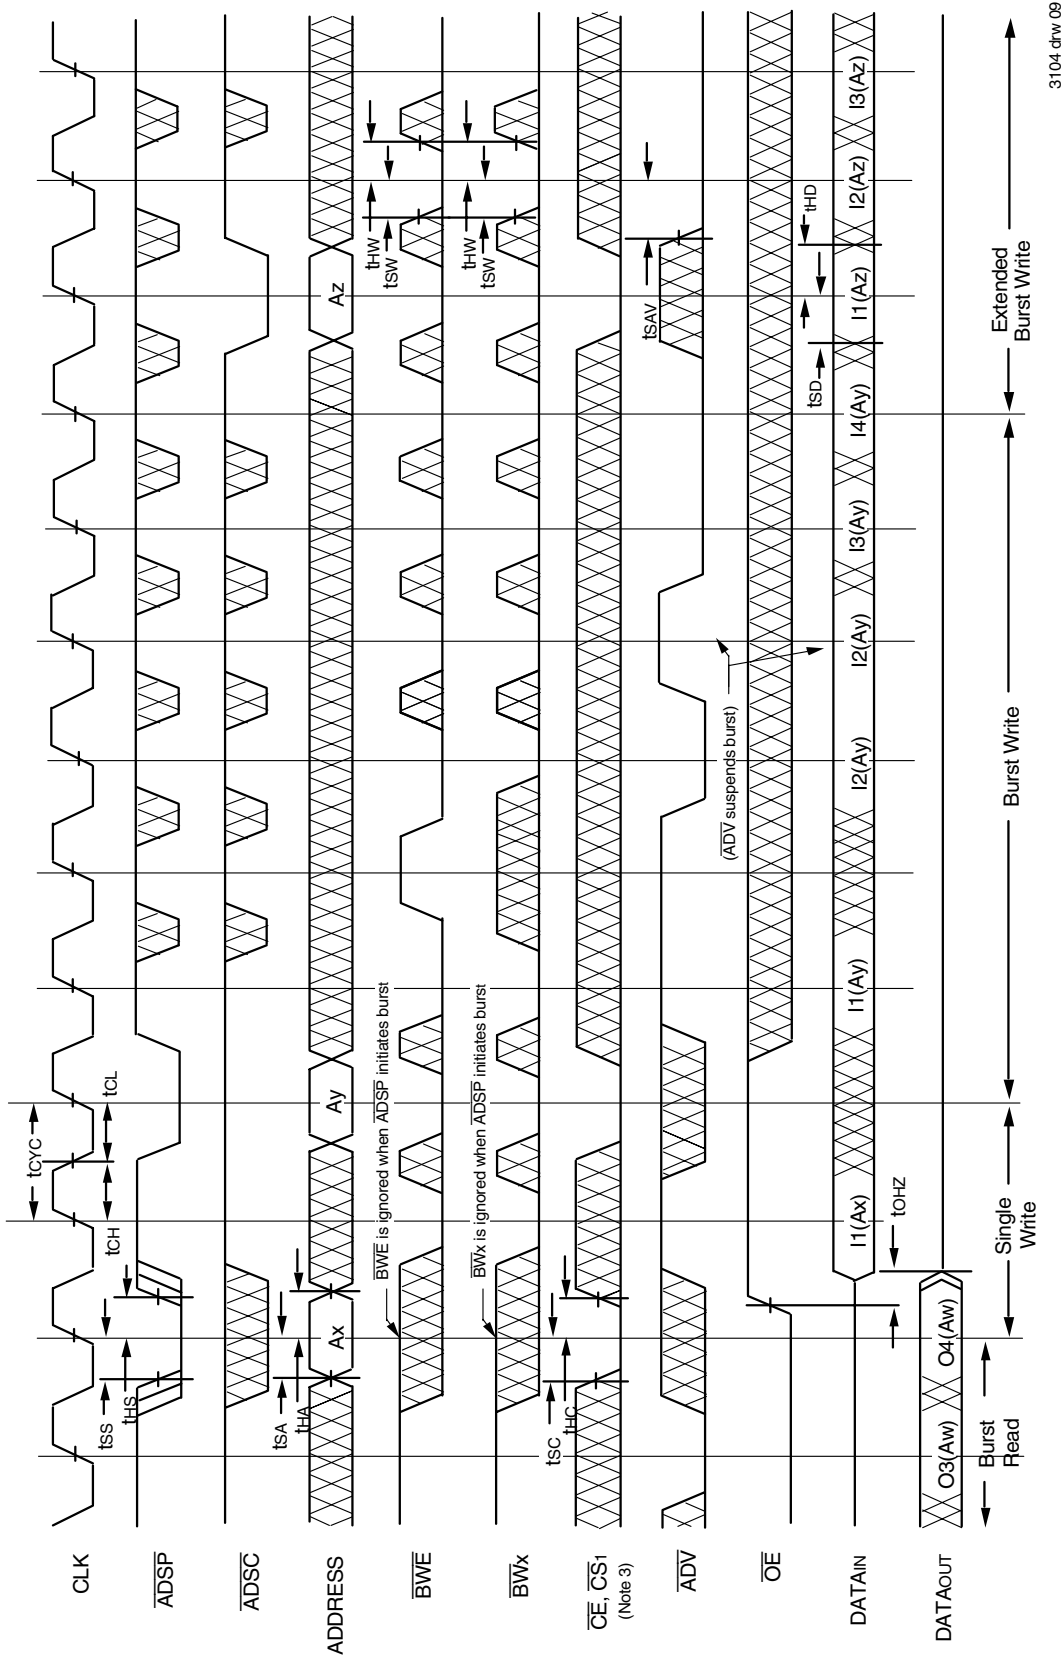

3104 drw 08

NOTES:

1. Z_Z input is LOW, \overline{BWE} is HIGH, and \overline{LBO} is Don't Care for this cycle.
2. O4(Aw) represents the final output data in the burst sequence of the base address Aw. I1(Ax) represents the first input from the external address Ax. I1(Ay) represents the first input from the external address Ay; I2(Ay) represents the next input data in the burst sequence of the base address Ay, etc. where A0 and A1 are advancing for the four word burst in the sequence defined by the state of the \overline{LBO} input. In the case of input I2(Ay) this data is valid for two cycles because ADV is high and has suspended the burst.
3. CS0 timing transitions are identical but inverted to the \overline{CE} and $\overline{CS1}$ signals. For example, when \overline{CE} and $\overline{CS1}$ are LOW on this waveform, CS0 is HIGH.

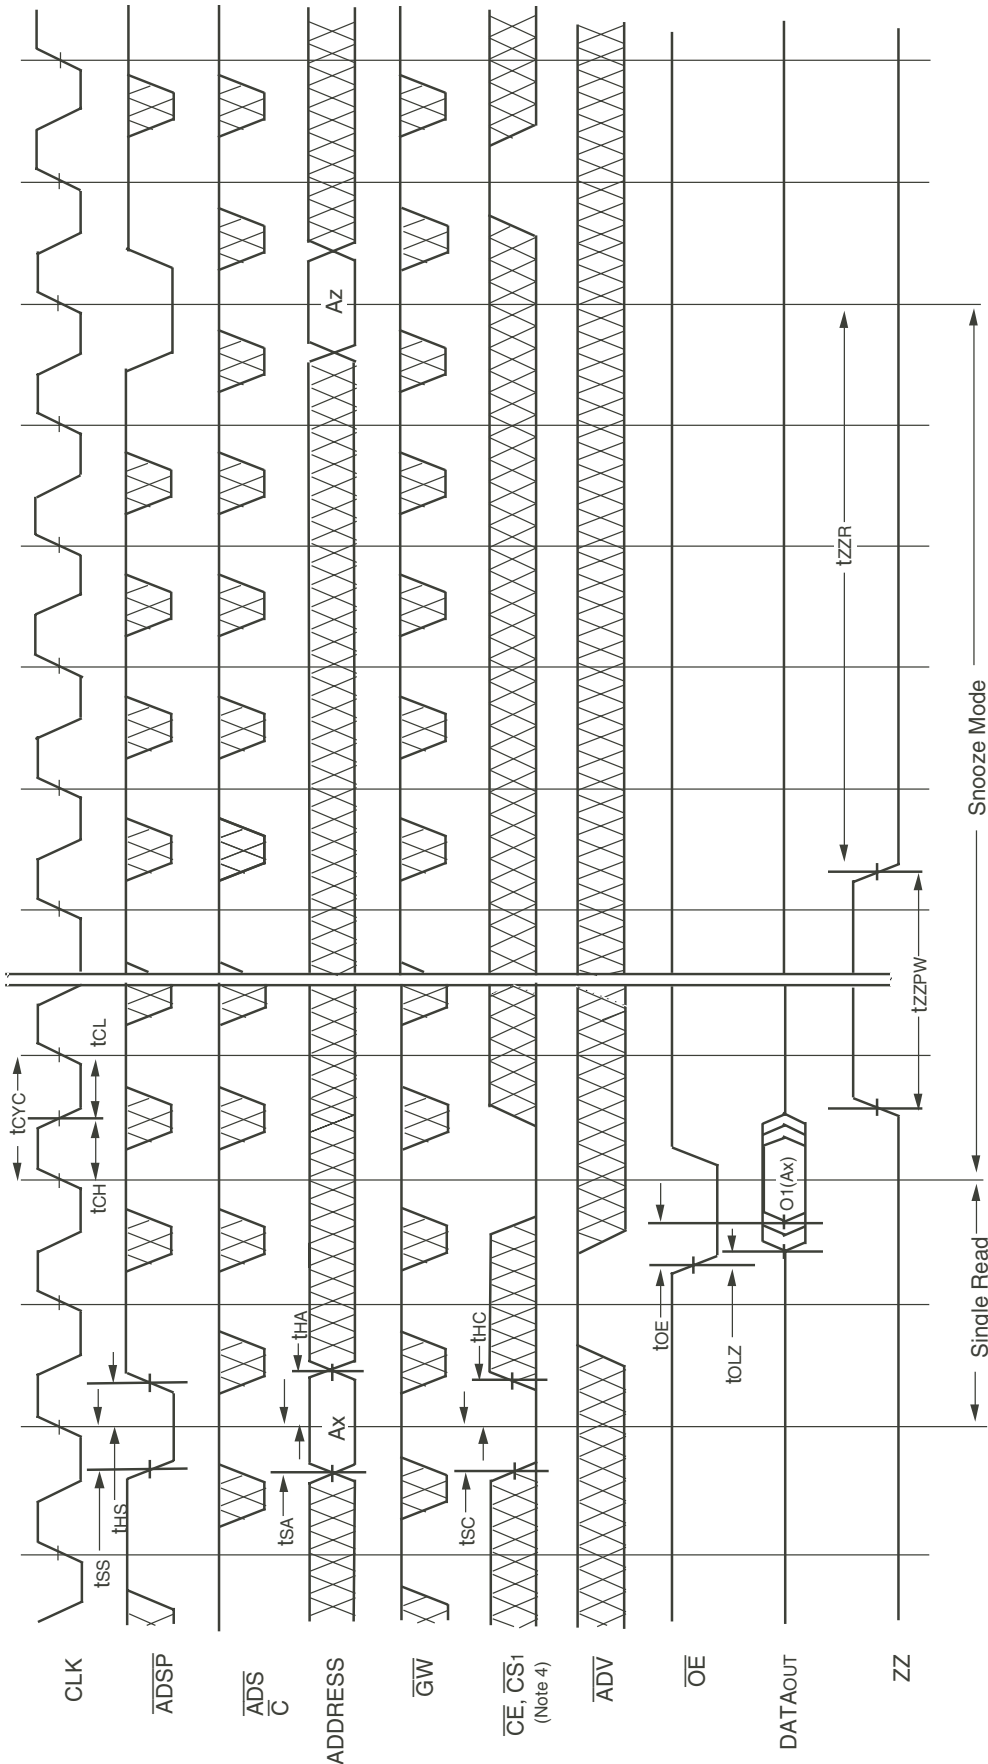

Timing Waveform of Write Cycle No. 2 — Byte Controlled^(1,2,3)

NOTES:

1. Z \bar{Z} input is LOW, $\overline{G\bar{W}}$ is HIGH, and $\overline{L\bar{B}\bar{O}}$ is Don't Care for this cycle.
2. O4(Aw) represents the final output data in the burst sequence of the base address Aw. I1(Ax) represents the first input from the external address Ax. I1(Ay) represents the first input from the external address Ay. I2(Ay) represents the next input data in the burst sequence of the base address Ay, etc. where A0 and A1 are advancing for the four word burst in the sequence defined by the state of the $\overline{L\bar{B}\bar{O}}$ input. In the case of input I2(Ay) this data is valid for two cycles because ADV is high and has suspended the burst.
3. CS0 timing transitions are identical but inverted to the $\overline{C\bar{E}}$ and $\overline{C\bar{S}1}$ signals. For example, when $\overline{C\bar{E}}$ and $\overline{C\bar{S}1}$ are LOW on this waveform, CS0 is HIGH.

Timing Waveform of Sleep (ZZ) and Power-Down Modes^(1,2,3)

3104 d1w 10

NOTES:

1. Device must power up in deselected Mode.
2. LBO input is Don't Care for this cycle.
3. It is not necessary to retain the state of the input registers throughout the Power-down cycle.
4. CS0 timing transitions are identical but inverted to the CE and CS1 signals. For example, when \overline{CE} and $\overline{CS1}$ are LOW on this waveform, CS0 is HIGH.

Non-Burst Read Cycle Timing Waveform

3619 drw 11

NOTES:

1. ZZ input is LOW, \overline{ADV} is HIGH and \overline{LBO} is Don't Care for this cycle.
2. (Ax) represents the data for address Ax, etc.
3. For read cycles, \overline{ADSP} and \overline{ADSC} function identically and are therefore interchangeable.

Non-Burst Write Cycle Timing Waveform

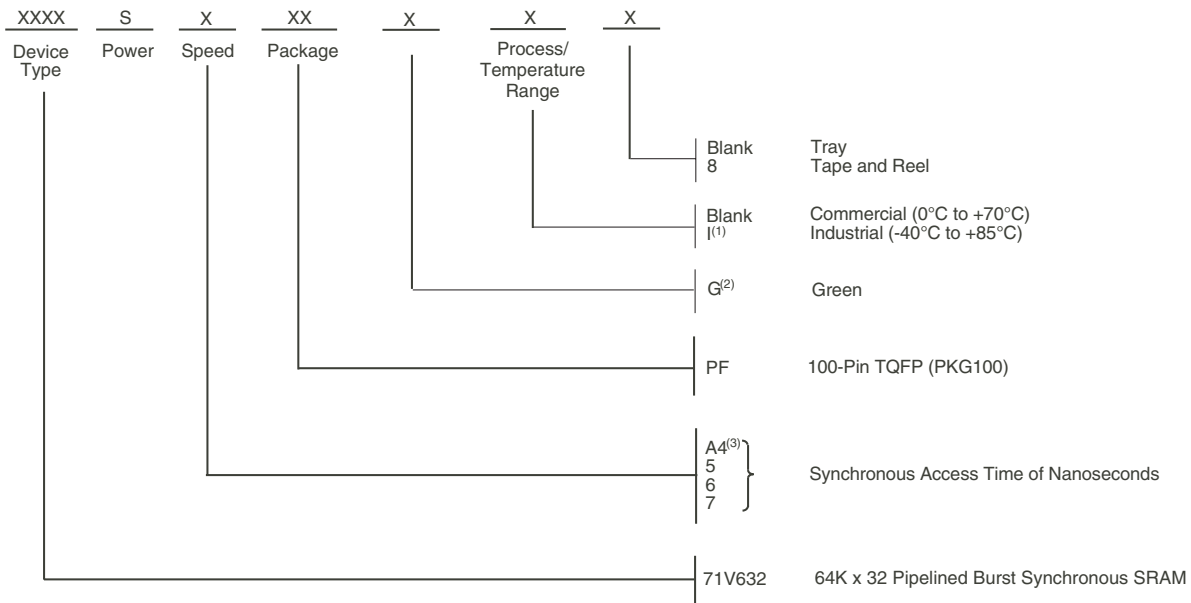

3619 drw 12

NOTES:

1. ZZ input is LOW, \overline{ADV} and \overline{OE} are HIGH, and $\overline{LB0}$ is Don't Care for this cycle.
2. (Ax) represents the data for address Ax, etc.
3. Although only \overline{GW} writes are shown, the functionality of \overline{BWE} and \overline{BWx} together is the same as \overline{GW} .
4. For write cycles, \overline{ADSP} and \overline{ADSC} have different limitations.

Ordering Information

3619 drw 13

NOTES:

1. Contact your local sales office for industrial temp range for other speeds, packages and powers.
2. Green parts available. For specific speeds, packages and powers contact your local sales office.
3. Commercial only.

Part Number	Speed in Megahertz	t _{CO} Parameter	Clock Cycle Time
71V632SA4PF	117 MHz	4.5 ns	8.5 ns
71V632S5PF	100 MHz	5 ns	10 ns
71V632S6PF	83 MHz	6 ns	12 ns
71V632S7PF	66 MHz	7 ns	15 ns

3619 tbl 16

Datasheet Document History

9/9/99		Updated to new format
	Pg. 1, 8, 9, 17	Revised speed offerings to 66–117MHz
	Pg. 15, 16	Added non-burst read and write cycle timing diagrams
	Pg. 18	Added Datasheet Document History
09/30/99	Pg. 1, 4, 8, 9, 17	Added industrial temperature range offerings
04/04/00	Pg. 17	Added 100pinTQFP package Diagram Outline
08/09/00		Not recommended for new designs
08/17/01		Removed “Not recommended for new designs” from the background on the datasheet
02/28/07	Pg. 18	Added Z generation die step to data sheet ordering information.
10/16/08	Pg. 18	Removed “IDT” from orderable part number.
05/27/10	Pg. 17	Added "Restricted hazardous substance device" to the ordering information
02/24/17	Pg. 1	Removed Z from device part number
		Added green availability to features
	Pg. 5	Update PK100-1 to package code PKG100 and restore overbars
	Pg. 14	Restored Sleep (ZZ) Timing Waveform
	Pg. 16	Restored Non-Burst Write Cycle Timing Waveform
		Removed PSC Package Diagram
	Pg. 17	Restored Ordering Information: Added Green, Tape & Reel, Tray and footnote indicators
		Removed Z Die Stepping indicator in Ordering Information

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
