

Description

This 25-bit 1:1 or 14-bit 1:2 configurable registered buffer is designed for 1.425V to 1.575V VDD operation.

The control inputs are LVCMOS. All outputs are 1.5-V CMOS drivers that have been optimized to drive the DDR-II DIMM load. IDT74SSTUAE32866A operates from a differential clock (CLK and $\overline{\text{CLK}}$). Data are registered at the crossing of CLK going high, and $\overline{\text{CLK}}$ going low.

The C0 input controls the pinout configuration of the 1:2 pinout from A configuration (when low) to B configuration (when high). The C1 input controls the pinout configuration from 25-bit 1:1 (when low) to 14-bit 1:2 (when high).

A - Pair Configuration (C01 = 0, C11 = 1 and C02 = 0, C12 = 1)

Parity that arrives one cycle after the data input to which it applies is checked on the PAR_IN of the first register. The second register produces PPO and QERR signals. The QERR of the first register is left floating. The valid error information is latched on the QERR output of the second register. If an error occurs QERR is latched low for two cycles or until RESET is low.

B - Single Configuration (C0 = 0, C1 = 0)

The device supports low-power standby operation. When the RESET input ($\overline{\text{RESET}}$) is low, the differential input receivers are disabled, and undriven (floating) data, clock and reference voltage (VREF) inputs are allowed. In addition, when $\overline{\text{RESET}}$ is low all registers are reset, and all outputs are forced low. The LVCMOS $\overline{\text{RESET}}$ and Cn inputs must always be held at a valid logic high or low level. To ensure defined outputs from the register before a stable clock has been supplied, $\overline{\text{RESET}}$ must be held in the low state during power up.

In the DDR-II RDIMM application, $\overline{\text{RESET}}$ is specified to be completely asynchronous with respect to CLK and $\overline{\text{CLK}}$. Therefore, no timing relationship can be guaranteed between the two. When entering reset, the register will be cleared and the outputs will be driven low quickly, relative to the time to disable the differential input receivers. However, when coming out of reset, the register will become active quickly, relative to the time to enable the differential input receivers. As long as the data inputs are low, and the clock is stable during the time from the low-to-high transition of $\overline{\text{RESET}}$ until the input receivers are fully enabled, the design of the IDT74SSTUAE32866A must ensure that the

outputs will remain low, thus ensuring no glitches on the output.

The device monitors both $\overline{\text{DCS}}$ and $\overline{\text{CSR}}$ inputs and will gate the Qn outputs from changing states when both $\overline{\text{DCS}}$ and $\overline{\text{CSR}}$ inputs are high. If either $\overline{\text{DCS}}$ and $\overline{\text{CSR}}$ input is low, the Qn outputs will function normally. The $\overline{\text{RESET}}$ input has priority over the $\overline{\text{DCS}}$ and $\overline{\text{CSR}}$ control and will force the outputs low. If the $\overline{\text{DCS}}$ -control functionality is not desired, then the $\overline{\text{CSR}}$ input can be hardwired to ground, in which case, the setup-time requirement for $\overline{\text{DCS}}$ would be the same as for the other D data inputs. Package options include 96-ball LFBGA (MO-205CC).

Features

- Supports 1.5V VDD operation for DDR2 DIMMs
- 25-bit 1:1 or 14-bit 1:2 registered buffer with parity check functionality
- Supports LVCMOS switching levels on C0, C1, and RESET inputs
- Low voltage operation: VDD = 1.425V to 1.575V
- Available in 96-ball LFBGA package

Applications

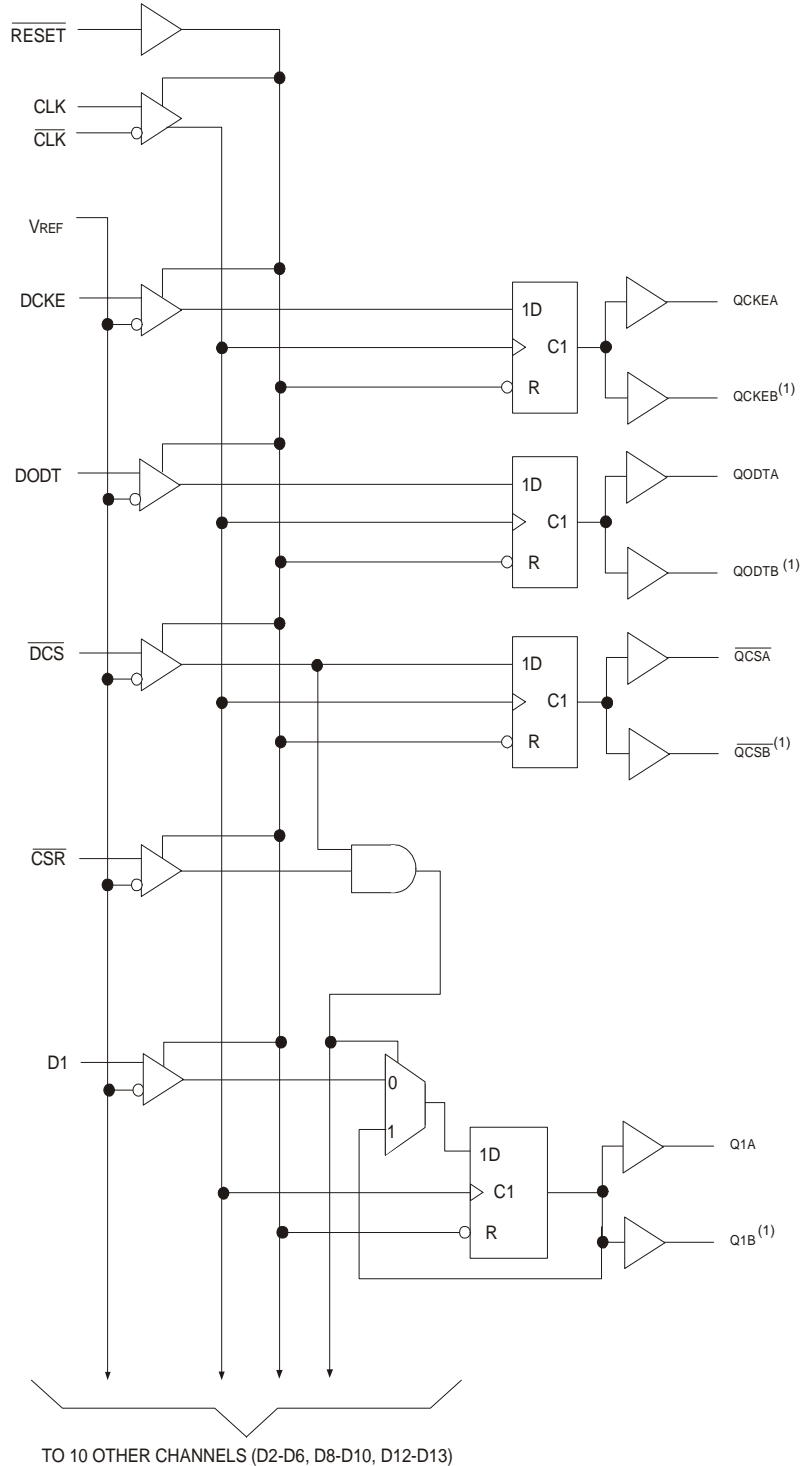

- DDR2 Memory Modules running at 1.5V VDD
- Provides complete DDR DIMM solution with ICS98UAE877A
- Ideal for DDR2 667

↓ = HIGH to LOW

Data Inputs = D2, D3, D5, D6, D8 - D25 when C0 = 0 and C1 = 0.

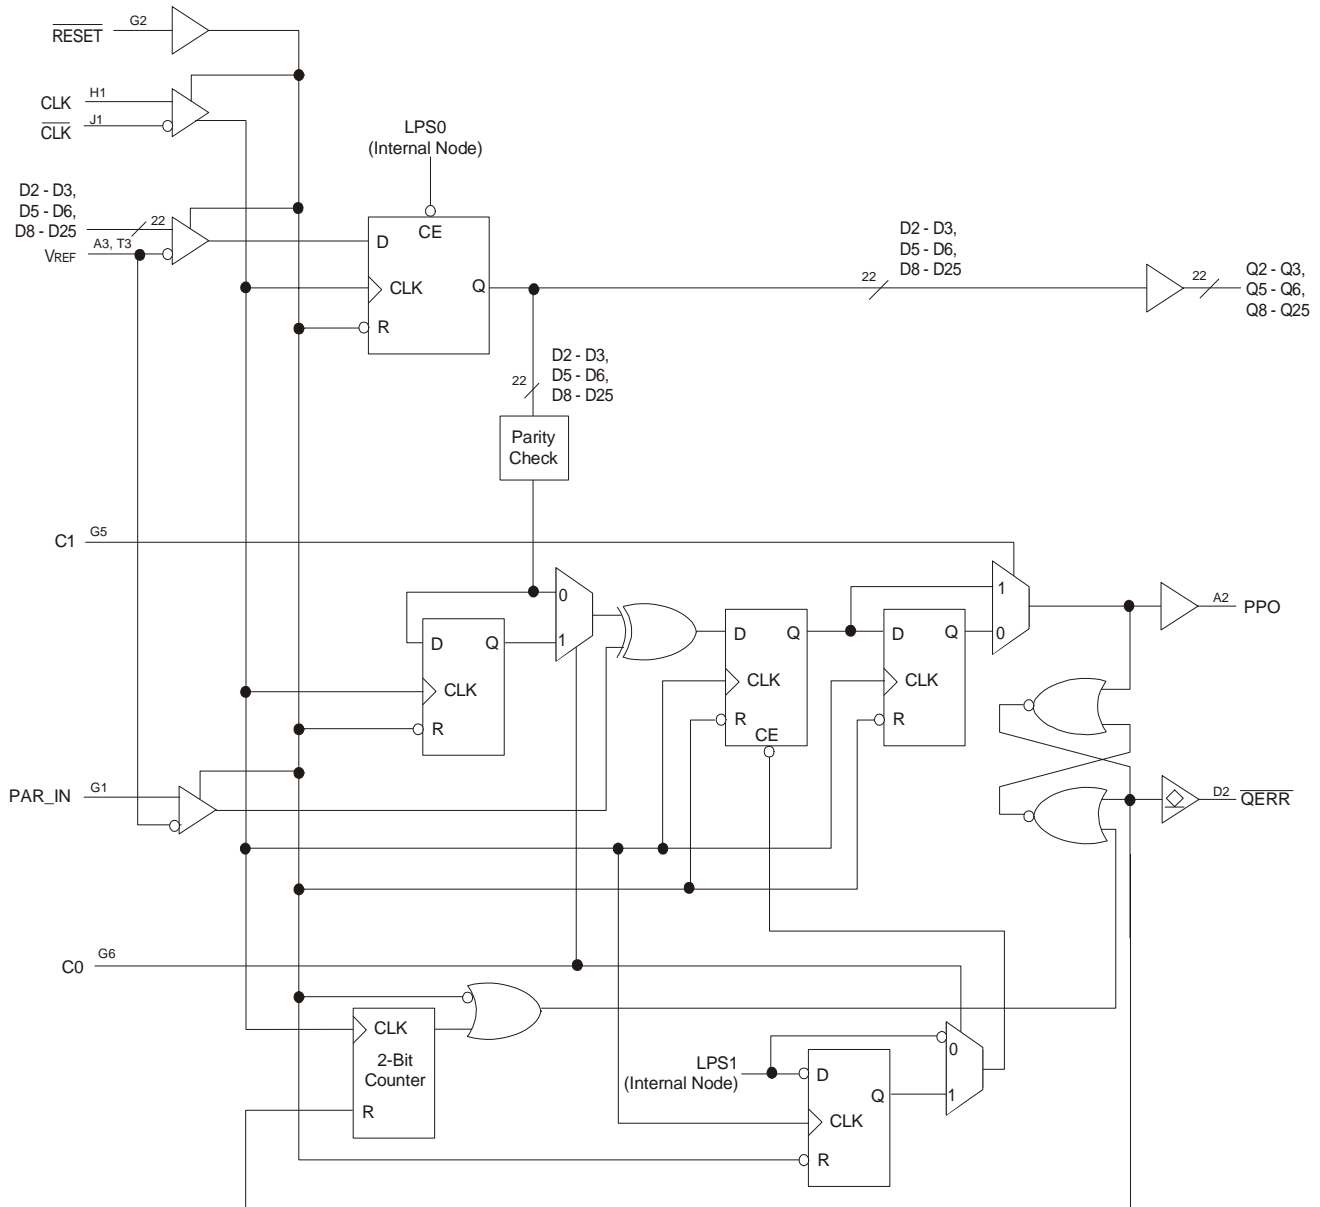

Data Inputs = D2, D3, D5, D6, D8 - D14 when C0 = 0 and C1 = 1.

Data Inputs = D1 - D6, D8 - D10, D12, D13 when C0 = 1 and C1 = 1.

2 PAR_IN arrives one clock cycle after the data to which it applies when C0 = 0, and two clock cycles when C0 = 1.

3 This transition assumes $\overline{\text{QERR}}$ is HIGH at the crossing of CLK going HIGH and $\overline{\text{CLK}}$ going LOW. If $\overline{\text{QERR}}$ is LOW, it stays latched LOW for two clock cycles or until $\overline{\text{RESET}}$ is driven LOW.

Absolute Maximum Ratings

Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Item		Rating
Supply Voltage, VDD		-0.5V to 2.5V
Input Voltage Range, Vi ¹		-0.5V to 2.5V
Output Voltage Range, Vo ^{1,2}		-0.5V to VDD + 0.5V
Input Clamp Current, IiK		±50mA
Output Clamp Current, IoK		±50mA
Continuous Output Clamp Current, Io		±50mA
Continuous Current through each VDD or GND		±100mA
Package Thermal Impedance (θ_{ja}) ³	0m/s Airflow	70.9° C/W
	1m/s Airflow	65° C/W
Storage Temperature		-65 to +150° C

1 The input and output negative voltage ratings may be exceeded if the ratings of the I/P and O/P clamp current are observed.

2 This current will flow only when the output is in the high state level $V_O > V_{DDQ}$.

3 The package thermal impedance is calculated in accordance with JESD 51.

Terminal Functions

Terminal Name	Electrical Characteristics	Description
GND	Ground Input	Ground
VDD	1.5V nominal	Power Supply Voltage
VREF	0.75V nominal	Input Reference Clock
ZOH	Input	Reserved for future use
ZOL	Input	Reserved for future use
CLK	Differential Input	Positive Master Clock Input
$\overline{\text{CLK}}$	Differential Input	Negative Master Clock Input
C0, C1	LVC MOS Input	Configuration Control Inputs
$\overline{\text{RESET}}$	LVC MOS Input	Asynchronous Reset Input. Resets registers and disables VREF data and clock differential-input receivers.
$\overline{\text{CSR}}, \overline{\text{DCS}}$	1.5V Input	Chip Select Inputs. Disables outputs D1 - D24 output switching when both inputs are HIGH.
D1 - D25	1.5V Input	Data Input. Clocked in on the crossing of the rising edge of CLK and the falling edge of $\overline{\text{CLK}}$.
DODT	1.5V Input	The outputs of this register bit will not be suspended by the $\overline{\text{DCS}}$ and $\overline{\text{CSR}}$ controls
DCKE	1.5V Input	The outputs of this register bit will not be suspended by the $\overline{\text{DCS}}$ and $\overline{\text{CSR}}$ controls
Q1 - Q25	1.5V CMOS	Data Outputs that are suspended by the $\overline{\text{DCS}}$ and $\overline{\text{CSR}}$ controls
$\overline{\text{QCS}}$	1.5V CMOS	Data Output that will not be suspended by the $\overline{\text{DCS}}$ and $\overline{\text{CSR}}$ controls
QODT	1.5V CMOS	Data Output that will not be suspended by the $\overline{\text{DCS}}$ and $\overline{\text{CSR}}$ controls
QCKE	1.5V CMOS	Data Output that will not be suspended by the $\overline{\text{DCS}}$ and $\overline{\text{CSR}}$ controls
PPO	1.5V CMOS	Partial Parity Output. Indicates off parity of D1 - D25
PAR_IN	1.5V Input	Parity Input arrives one cycle after corresponding data input
$\overline{\text{QERR}}$	Open Drain Output	Output Error bit, generated one cycle after the corresponding data output

Operating Characteristics

The $\overline{\text{RESET}}$ and Cn inputs of the device must be held at valid levels (not floating) to ensure proper device operation. The differential inputs must not be floating unless $\overline{\text{RESET}}$ is LOW.

Symbol	Parameter		Min.	Typ.	Max.	Units
VDDQ	I/O Supply Voltage		1.425	1.5	1.575	V

DC Electrical Characteristics Over Operating Range

Following Conditions Apply Unless Otherwise Specified:

Operating Condition: $T_A = 0^{\circ}\text{C}$ to $+70^{\circ}\text{C}$, $V_{DD} = 1.425\text{V}$ to 1.575V .

Symbol	Parameter	Test Conditions	Min.	Typ.	Max.	Units
V_{IK}		$I_I = -18\text{mA}$			-1.2	V
V_{OH}	Output HIGH Voltage	$I_{OH} = -6\text{mA}$	$V_{DD} - 0.4$			V
V_{OL}	Output LOW Voltage	$I_{OL} = 6\text{mA}$			0.4	V
V_{ERROL}	\overline{QERR} Output LOW Voltage	$I_{ERROL} = 25\text{mA}$, $V_{DD} = 1.425\text{V}$			0.4	V
I_{IL}	All Inputs	$V_I = V_{DD}$ or GND; $V_{DD} = 1.575\text{V}$	-5		+5	μA
I_{DD}	Static Standby	$I_O = 0$, $V_{DD} = 1.575\text{V}$, $\overline{RESET} = \text{GND}$			100	μA
	Static Operating	$I_O = 0$, $V_{DD} = 1.575\text{V}$, $\overline{RESET} = V_{DD}$, $V_I = V_{IH(AC)}$ or $V_{IL(AC)}$, $\text{CLK} = \overline{\text{CLK}} = V_{IH(AC)}$ or $V_{IL(AC)}$			20	mA
$I_O = 0$, $V_{DD} = 1.575\text{V}$, $\overline{RESET} = V_{DD}$, $V_I = V_{IH(AC)}$ or $V_{IL(AC)}$, $\text{CLK} = V_{IH(AC)}$, $\overline{\text{CLK}} = V_{IL(AC)}$				80		
I_{DDD}	Dynamic Operating (clock only)	$I_O = 0$, $V_{DD} = 1.5\text{V}$, $\overline{RESET} = V_{DD}$, $V_I = V_{IH(AC)}$ or $V_{IL(AC)}$, CLK and $\overline{\text{CLK}}$ switching 50% duty cycle		170		$\mu\text{A}/\text{Clock MHz}$
	Dynamic Operating (per each data input)	$I_O = 0$, $V_{DD} = 1.5\text{V}$, $\overline{RESET} = V_{DD}$, $V_I = V_{IH(AC)}$ or $V_{IL(AC)}$, CLK and $\overline{\text{CLK}}$ switching 50% duty cycle. One data input switching at half clock frequency, 50% duty cycle.	1:1 mode		50	$\mu\text{A}/\text{Clock MHz}/\text{Data Input}$
			1:2 mode		90	
C_{IN}	Data Inputs	$V_I = V_{REF} \pm 0.175$	2		3	pF
	CLK and $\overline{\text{CLK}}$	$V_{ICR} = 0.75\text{V}$, $V_{IPP} = 360\text{mV}$	2		3	
	\overline{RESET}	$V_I = V_{DD}$ or GND		5		

Timing Requirements Over Recommended Operating Free-Air Temperature Range

Symbol	Parameter	VDD = 1.5V ± 0.075V		Units
		Min.	Max.	
fCLOCK	Clock Frequency		410	MHz
tW	Pulse Duration, CLK, $\overline{\text{CLK}}$ HIGH or LOW	1		ns
tACT ¹	Differential Inputs Active Time		10	ns
tINACT ²	Differential Inputs Inactive Time		15	ns
tSU	Setup Time	$\overline{\text{DCS}}$ before CLK \uparrow , $\overline{\text{CLK}}\downarrow$, $\overline{\text{CSR}}$ HIGH; $\overline{\text{CSR}}$ before CLK \uparrow , $\overline{\text{CLK}}\downarrow$, $\overline{\text{DCS}}$ HIGH	0.7	ns
		$\overline{\text{DCS}}$ before CLK \uparrow , $\overline{\text{CLK}}\downarrow$, $\overline{\text{CSR}}$ LOW	0.5	
		DODT, DOCKE, and data before CLK \uparrow , $\overline{\text{CLK}}\downarrow$	0.5	
		PAR_IN before CLK \uparrow , $\overline{\text{CLK}}\downarrow$	0.5	
tH	Hold Time	$\overline{\text{DCS}}$, DODT, DCKE, and data after CLK \uparrow , $\overline{\text{CLK}}\downarrow$	0.5	ns
		PAR_IN after CLK \uparrow , $\overline{\text{CLK}}\downarrow$	0.5	

1 VREF must be held at a valid input voltage level and data inputs must be held at valid logic levels for a minimum time of tACT(max) after $\overline{\text{RESET}}$ is taken HIGH.

2 VREF, data, and clock inputs must be held at a valid input voltage levels (not floating) for a minimum time of tINACT(max) after $\overline{\text{RESET}}$ is taken LOW.

Switching Characteristics Over Recommended Free Air Operating Range (unless otherwise noted)

Symbol	Parameter	VDD = 1.5V ± 0.075V		Units

1. CL includes probe and jig capacitance.
2. IDD tested with clock and data inputs held at VDD or GND, and $I_o = 0mA$
3. All input pulses are supplied by generators having the following characteristics: PRR $\leq 10MHz$, $Z_o = 50\Omega$, input slew rate = $1 V/ns \pm 20\%$ (unless otherwise specified).
4. The outputs are measured one at a time with one transition per measurement.
5. $V_{TT} = V_{REF} = V_{DD}/2$
6. $V_{IH} = V_{REF} + 175mV$ (AC voltage levels) for differential inputs. $V_{IH} = V_{DD}$ for LVC MOS input.
7. $V_{IL} = V_{REF} - 175mV$ (AC voltage levels) for differential inputs. $V_{IL} = GND$ for LVC MOS input.
8. $V_{ID} = 600mV$.
9. tPLH and tPHL are the same as tPDM.

Test Circuits and Waveforms ($V_{DD} = 1.5V \pm 0.075V$)

Load Circuit: High-to-Low Slew-Rate Adjustment

Voltage Waveforms: High-to-Low Slew-Rate Adjustment

Load Circuit: Error Output Measurements

Voltage Waveforms: Open Drain Output Low-to-High Transition Time (with respect to RESET input)

Load Circuit: Low-to-High Slew-Rate Adjustment

Voltage Waveforms: Low-to-High Slew-Rate Adjustment

Voltage Waveforms: Open Drain Output High-to-Low Transition Time (with respect to clock inputs)

Voltage Waveforms: Open Drain Output Low-to-High Transition Time (with respect to clock inputs)

NOTES:

1. C_L includes probe and jig capacitance.
2. All input pulses are supplied by generators having the following characteristics: PRR $\leq 10\text{MHz}$, $Z_o = 50\Omega$, input slew rate = $1\text{ V/ns} \pm 20\%$ (unless otherwise specified).

Test Circuits and Waveforms ($V_{DD} = 1.5V \pm 0.075V$)

Load Circuit: Partial-Parity-Out Load Circuit

Load Circuit: Partial-Parity-Out Voltage Waveforms Propagation Delay Times (with respect to clock inputs)

Load Circuit: Partial-Parity-Out Voltage Waveforms Propagation Delay Times (with respect to $\overline{\text{RESET}}$ input)

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
