

## General Description

The 810001-21 is a PLL based synchronous clock generator that is optimized for digital video clock jitter attenuation and frequency translation. The device contains two internal frequency multiplication stages that are cascaded in series. The first stage is a VCXO PLL that is optimized to provide reference clock jitter attenuation, and to support the complex PLL multiplication ratios needed for video rate conversion. The second stage is a FemtoClock™ frequency multiplier that provides the low jitter, high frequency video output clock.

Preset multiplication ratios are selected from internal lookup tables using device input selection pins. The multiplication ratios are optimized to support most common video rates used in professional video system applications. The VCXO requires the use of an external, inexpensive pullable crystal. Two crystal connections are provided (pin selectable) so that both 60 and 59.94 base frame rates can be supported. The VCXO requires external passive loop filter components which are used to set the PLL loop bandwidth and damping characteristics.

## Features

- Jitter attenuation and frequency translation of video clock signals
- Supports SMPTE 292M, ITU-R Rec. 601/656 and MPEG-transport clocks
- Support of High-Definition (HD) and Standard-Definition (SD) pixel rates
- Dual VCXO-PLL supports both 60 and 59.94Hz base frame rates in one device
- Supports both 1000/1001 and 1001/1000 rate conversions
- Dual PLL mode for high-frequency clock generation (36MHz to 148.5MHz)
- VCXO-PLL mode for low-frequency clock generation (27MHz and 26.973MHz)
- One LVCMOS/LVTTL clock output
- Two selectable LVCMOS/LVTTL clock inputs
- LVCMOS/LVTTL compatible control signals
- RMS phase jitter @ 148.3516MHz, (12kHz - 20MHz): 1.089ps (typical)
- 3.3V supply voltage
- 0°C to 70°C ambient operating temperature
- Available in lead-free (RoHS 6) packages

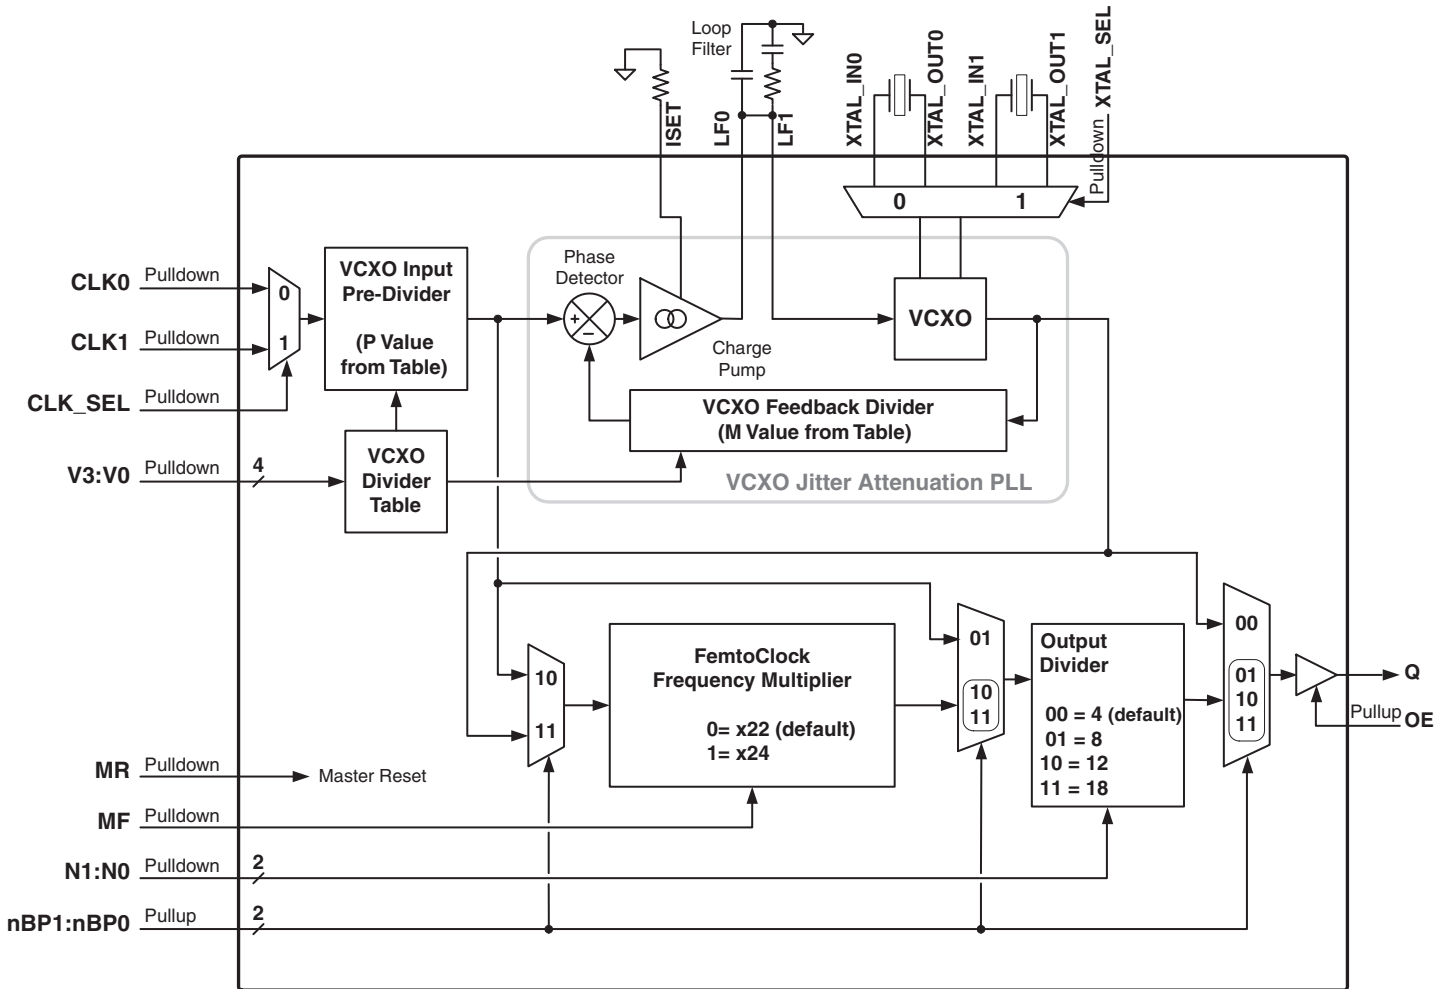

### Supported Input Frequencies

$f_{VCXO} = 27\text{MHz}$	$f_{VCXO} = 26.973\text{MHz}$
27.0000MHz	26.9730MHz
27.0270MHz	27.0000MHz
74.1758MHz	74.1016MHz
74.3243MHz	74.2499MHz
74.2500MHz	74.1758MHz
27.0270MHz	27.0000MHz
26.9730MHz	26.9461MHz
74.1758MHz	74.1016kHz
45.0000kHz	44.9550kHz
33.7500kHz	33.7163kHz
15.6250kHz	15.6094kHz
15.7343kHz	15.7185kHz
28.1250kHz	28.0969kHz

### Supported Output Frequencies

$f_{VCXO} = 27\text{MHz}$	$f_{VCXO} = 26.973\text{MHz}$
148.5000MHz	148.3515MHz
74.2500MHz	74.1758MHz
49.5000MHz	49.4505MHz
33.0000MHz	32.9670MHz
162.0000MHz	161.8380MHz
81.0000MHz	80.9190MHz
54.0000MHz	53.9460MHz
36.0000MHz	35.9640MHz
27.0000MHz	26.9730MHz

**Table 1. Pin Descriptions**

Number	Name	Type		Description
1, 2	LF1, LF0	Analog Input/Output		Loop filter connection node pins.
3	ISET	Analog Input/Output		Charge pump current setting pin.
4, 11, 25	V <sub>DD</sub>	Power		Core supply pins.
5, 22	nBP0, nBP1	Input	Pullup	PLL Bypass control pins. See block diagram.
6, 20, 29	GND	Power		Power supply ground.
7	CLK_SEL	Input	Pulldown	Input clock select. When HIGH selects CLK1. When LOW, selects CLK0. LVCMOS / LVTTTL interface levels.
8, 9	CLK1, CLK0	Input	Pulldown	Single-ended clock inputs. LVCMOS/LVTTTL interface levels.
10, 14, 15, 16	V0, V1, V2, V3	Input	Pulldown	VCXO PLL divider selection pins. LVCMOS/LVTTTL interface levels.
12	MR	Input	Pulldown	Active HIGH Master Reset. When logic HIGH, the internal dividers are reset causing the output to go low. When logic LOW, the internal dividers and the output is enabled. LVCMOS/LVTTTL interface levels.
13	MF	Input	Pulldown	FemtoClock multiplication factor select pin. LVCMOS/LVTTTL interface levels.
17	V <sub>DDA</sub>	Power		Analog supply pin.
18	V <sub>DDO</sub>	Power		Output supply pin.
19	Q	Output		Single-ended VCXO PLL clock output. LVCMOS/LVTTTL interface levels.
21	OE	Input	Pullup	Output enable. When logic LOW, the clock output is in high-impedance. When logic HIGH, the output is enabled. LVCMOS/LVTTTL interface levels.
23, 24	N1, N0	Input	Pulldown	FemtoClock output divide select pins. LVCMOS/LVTTTL interface levels.
26	XTAL_SEL	Input	Pulldown	Crystal select. When HIGH, selects XTAL1. When LOW, selects XTAL0. LVCMOS/LVTTTL interface levels.
27, 28	XTAL_OUT1, XTAL_IN1	Input		Crystal oscillator interface. XTAL_IN1 is the input. XTAL_OUT1 is the output.
30, 31	XTAL_OUT0, XTAL_IN0	Input		Crystal oscillator interface. XTAL_IN0 is the input. XTAL_OUT0 is the output.
32	V <sub>DDX</sub>	Power		Power supply pin for VCXO charge pump.

NOTE: *Pullup* and *Pulldown* refer to internal input resistors. See Table 2, *Pin Characteristics*, for typical values.

**Table 2. Pin Characteristics**

Symbol	Parameter	Test Conditions	Minimum	Typical	Maximum	Units
C <sub>IN</sub>	Input Capacitance			4		pF
C <sub>PD</sub>	Power Dissipation Capacitance (per output)	V <sub>DD</sub> = V <sub>DDO</sub> = 3.465V		8.5		pF
R <sub>PULLUP</sub>	Input Pullup Resistor			51		kΩ
R <sub>PULLDOWN</sub>	Input Pulldown Resistor			51		kΩ
R <sub>OUT</sub>	Output Impedance			22.5		Ω

	1	1	1	35.9640

NOTE: Use the VCXO-PLL mode to achieve output Frequencies of 27MHz or 26.973MHz. See Table 3H.

**Table 3D. CLK\_SEL Function Table**

Input	Operation
CLK_SEL	
0 (default)	Selects CLK0 as PLL reference input.
1	Selects CLK1 as PLL reference input.

**Table 3E. MR Master Reset Function Table**

Input	Operation
MR	
0 (default)	Normal operation, internal dividers and the output Q are enabled.
1	Internal dividers are reset. Q output is in logic low state (with OE = 1).

**Table 3F. FemtoClock PLL Feedback Divider Function Table**

Input	Operation
MF	
0 (default)	Selects MF = 22. The 2nd stage PLL (FemtoClock, multiplies the output frequency of the VCXO-PLL by 22.
1	Selects MF = 24. The 2nd stage PLL (FemtoClock, multiplies the output frequency of the VCXO-PLL by 24.

**Table 3G. PLL Output Divider Function Table**

Input		Operation
N1	N0	
0 (default)	0 (default)	Output divider N = 4.
0	1	Output divider N = 8.
1	0	Output divider N = 12.
1	1	Output divider N = 18.

**Table 3H. PLL BYPASS Logic Function Table**

Input		Operation
nBP1	nBP0	
0	0	VCXO-PLL mode: The input reference frequency is divided by the pre-divider P and is multiplied by the VCXO-PLL. $f_{OUT} = (f_{REF} \div P) * M$ .
0	1	Test mode: The input reference frequency is divided by the pre-divider P and the output divider N and bypasses both PLLs. $f_{OUT} = f_{REF} \div (P * N)$ .
1	0	FemtoClock Mode: The input reference frequency is divided by the pre-divider P multiplied by the 2 <sup>nd</sup> PLL (FemtoClock, MF). The 1 <sup>st</sup> PLL (VCXO-PLL, M) is bypassed. This mode does not support jitter attenuation. $f_{OUT} = (f_{REF} \div P) * MF \div N$ .
1 (default)	1 (default)	Dual PLL Mode: both PLLs are cascaded for jitter attenuation and frequency multiplication. $f_{OUT} = (f_{REF} \div P) * M * MF \div N$ .

## Absolute Maximum Ratings

NOTE: Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These ratings are stress specifications only. Functional operation of product at these conditions or any conditions beyond those listed in the *DC Characteristics* or *AC Characteristics* is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.

Item	Rating
Supply Voltage, $V_{DD}$	4.6V
Inputs, $V_I$ XTAL_IN Other Inputs	0V to $V_{DD}$ -0.5V to $V_{DD} + 0.5V$
Outputs, $V_O$	-0.5V to $V_{DDO} + 0.5V$
Package Thermal Impedance, $\theta_{JA}$	37°C/W (0 mps)
Storage Temperature, $T_{STG}$	-65°C to 150°C

## DC Electrical Characteristics

**Table 4A. Power Supply DC Characteristics,  $V_{DD} = V_{DDO} = V_{DDX} = 3.3V \pm 5\%$ ,  $T_A = 0^\circ\text{C}$  to  $70^\circ\text{C}$**

Symbol	Parameter	Test Conditions	Minimum	Typical	Maximum	Units
$V_{DD}$	Core Supply Voltage		3.135	3.3	3.465	V
$V_{DDA}$	Analog Supply Voltage		$V_{DD} - 0.15$	3.3	$V_{DD}$	V
$V_{DDO}$	Output Supply Voltage		3.135	3.3	3.465	V
$V_{DDX}$	Charge Pump Supply Voltage		$V_{DD} - 0.04$	3.3	3.465	V

## Applications Information

### Recommendations for Unused Input Pins

#### Inputs:

##### CLK Inputs

For applications not requiring the use of a clock input, it can be left floating. Though not required, but for additional protection, a  $1k\Omega$  resistor can be tied from the CLK input to ground.

##### LVC MOS Control Pins

All control pins have internal pullups or pulldowns; additional resistance is not required but can be added for additional protection. A  $1k\Omega$  resistor can be used.

### Power Supply Filtering Technique

As in any high speed analog circuitry, the power supply pins are vulnerable to random noise. To achieve optimum jitter performance, power supply isolation is required. The 810001-21 provides separate power supplies to isolate any high switching noise from the outputs to the internal PLL.  $V_{DD}$ ,  $V_{DDA}$ ,  $V_{DDO}$  and  $V_{DDX}$  should be individually connected to the power supply plane through vias, and  $0.01\mu\text{F}$  bypass capacitors should be used for each pin. *Figure 1* illustrates this for a generic  $V_{DD}$  pin and also shows that  $V_{DDA}$  requires that an additional  $10\Omega$  resistor along with a  $10\mu\text{F}$  bypass capacitor be connected to the  $V_{DDA}$  pin.

Figure 1. Power Supply Filtering

## VFQFN EPAD Thermal Release Path

In order to maximize both the removal of heat from the package and the electrical performance, a land pattern must be incorporated on the Printed Circuit Board (PCB) within the footprint of the package corresponding to the exposed metal pad or exposed heat slug on the package, as shown in *Figure 2*. The solderable area on the PCB, as defined by the solder mask, should be at least the same size/shape as the exposed pad/slug area on the package to maximize the thermal/electrical performance. Sufficient clearance should be designed on the PCB between the outer edges of the land pattern and the inner edges of pad pattern for the leads to avoid any shorts.

While the land pattern on the PCB provides a means of heat transfer and electrical grounding from the package to the board through a solder joint, thermal vias are necessary to effectively conduct from the surface of the PCB to the ground plane(s). The land pattern must be connected to ground through these vias. The vias act as “heat pipes”. The number of vias (i.e. “heat pipes”) are application specific and dependent upon the package power dissipation as well as

electrical conductivity requirements. Thus, thermal and electrical analysis and/or testing are recommended to determine the minimum number needed. Maximum thermal and electrical performance is achieved when an array of vias is incorporated in the land pattern. It is recommended to use as many vias connected to ground as possible. It is also recommended that the via diameter should be 12 to 13mils (0.30 to 0.33mm) with 1oz copper via barrel plating. This is desirable to avoid any solder wicking inside the via during the soldering process which may result in voids in solder between the exposed pad/slug and the thermal land. Precautions should be taken to eliminate any solder voids between the exposed heat slug and the land pattern. Note: These recommendations are to be used as a guideline only. For further information, please refer to the Application Note on the Surface Mount Assembly of Amkor’s Thermally/Electrically Enhance Leadframe Base Package, Amkor Technology.

**Figure 2. P.C. Assembly for Exposed Pad Thermal Release Path – Side View (drawing not to scale)**

### Schematic Example

Figure 3 shows an example of the 810001-21 application schematic. In this example, the device is operated at  $V_{DD} = V_{DDX} = V_{DDO} = V_{DDA} = 3.3V$ . The decoupling capacitors should be located as close as possible to the power pin. The input is driven by a 3.3V 17Ω LVC MOS driver. An optional 3-pole filter can also be used for additional spur reduction. It is recommended that the loop filter

components be laid out for the 3-pole option. This will also allow the 2-pole filter to be used. For the LVC MOS output, a termination example is shown in this schematic. For more termination approaches, please refer to the LVC MOS Termination Application Note.

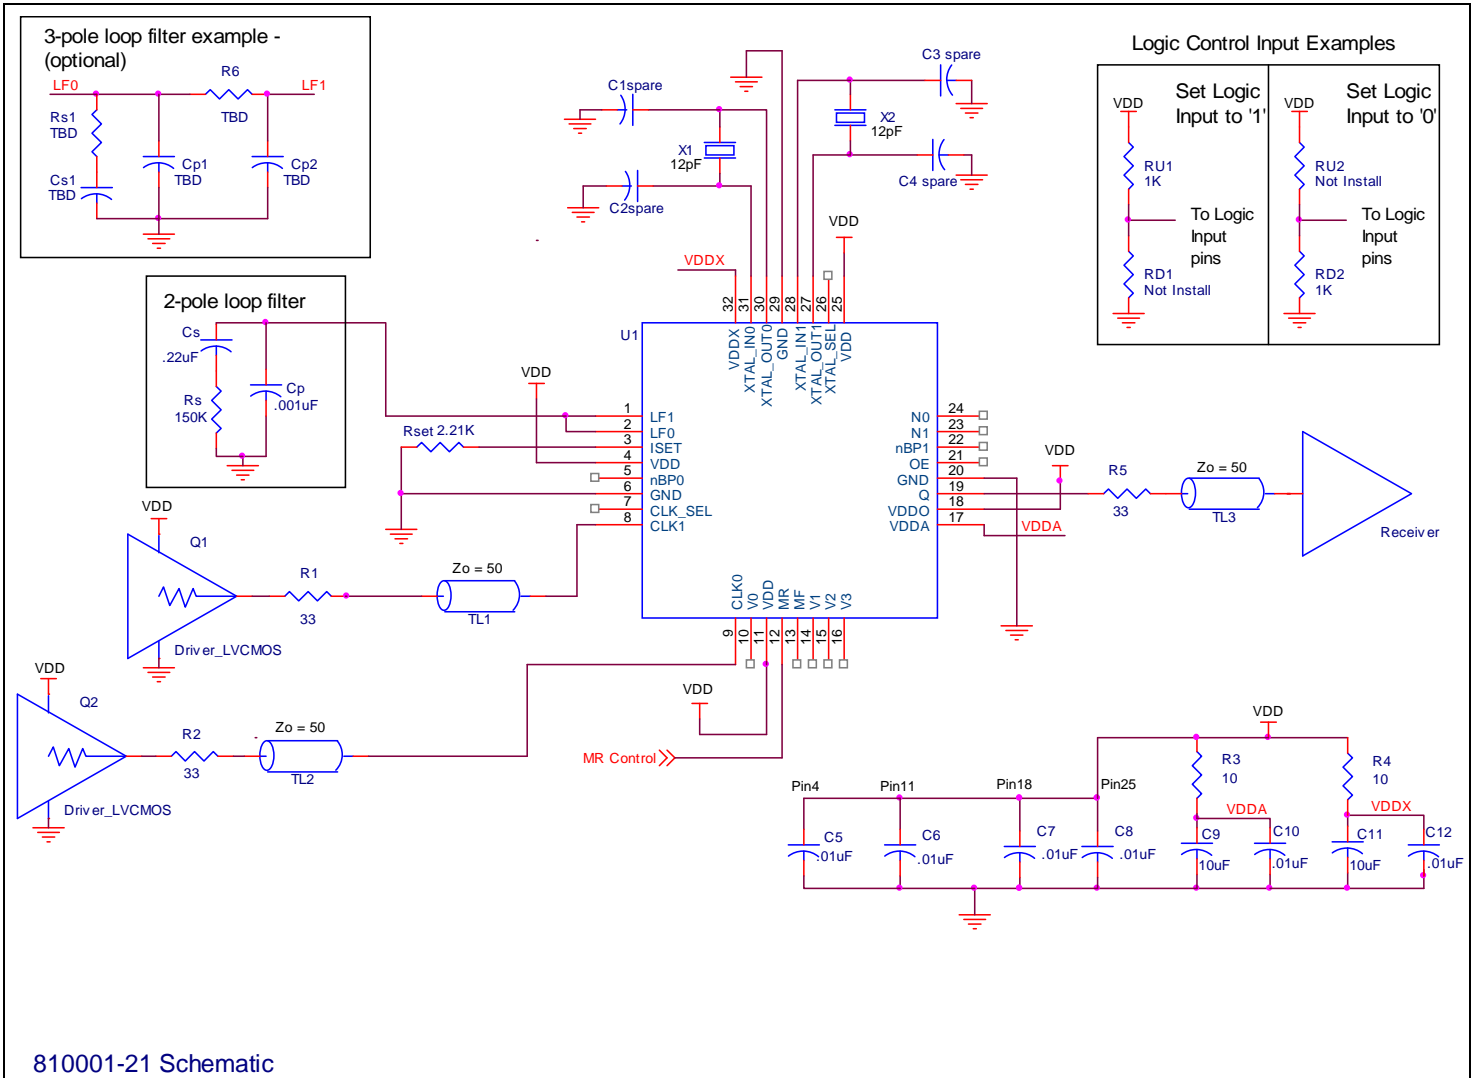

Figure 3. 810001-21 Schematic Example

## VCXO-PLL EXTERNAL COMPONENTS

Choosing the correct external components and having a proper printed circuit board (PCB) layout is a key task for quality operation of the VCXO-PLL. In choosing a crystal, special precaution must be taken with the package and load capacitance ( $C_L$ ). In addition, frequency, accuracy and temperature range must also be considered. Since the pulling range of a crystal also varies with the package, it is recommended that a metal-canned package like HC49 be used. Generally, a metal-canned package has a larger pulling range than a surface mounted device (SMD). For crystal selection information, refer to the *VCXO Crystal Selection Application Note*.

The crystal's load capacitance  $C_L$  characteristic determines its resonating frequency and is closely related to the VCXO tuning range. The total external capacitance seen by the crystal when installed on a board is the sum of the stray board capacitance, IC package lead capacitance, internal varactor capacitance and any installed tuning capacitors ( $C_{TUNE}$ ).

If the crystal  $C_L$  is greater than the total external capacitance, the VCXO will oscillate at a higher frequency than the crystal specification. If the crystal  $C_L$  is lower than the total external capacitance, the VCXO will oscillate at a lower frequency than the crystal specification. In either case, the absolute tuning range is reduced. The correct value of  $C_L$  is dependent on the characteristics of the VCXO. The recommended  $C_L$  in the Crystal Parameter Table balances the tuning range by centering the tuning curve.

The frequency of oscillation in the third overtone mode is not necessarily at exactly three times the fundamental frequency. The mechanical properties of the quartz element dictate the position of the overtones relative to the fundamental. The oscillator circuit may excite both the fundamental and overtone modes simultaneously. This will cause a nonlinearity in the tuning curve.

This potential problem is why VCXO crystals are required to be tested for absence of any activity inside a  $\pm 200$ ppm window at three times the fundamental frequency. Refer to  $F_{L\_3OVT}$  and  $F_{L\_3OVT\_spurs}$  in the crystal Characteristics table. The crystal and external loop filter components should be kept as close as possible to the device. Loop filter and crystal traces should be kept short and separated from each other. Other signal traces should be kept separate and not run underneath the device, loop filter or crystal components.

### VCXO Characteristics Table

Symbol	Parameter	Typical	Units
$k_{VCXO}$	VCXO Gain	6.6	kHz/V
$C_{V\_LOW}$	Low Varactor Capacitance	15	pF
$C_{V\_HIGH}$	High Varactor Capacitance	29	pF

### VCXO-PLL Loop Bandwidth Selection Table

Bandwidth	Crystal Frequency (MHz)	M	$R_S$ (k $\Omega$ )	$C_S$ ( $\mu$ F)	$C_P$ ( $\mu$ F)	$R_{SET}$ (k $\Omega$ )
6Hz (Low)	27	4004	175	4.7	0.01	8.0
80Hz (Mid)	27	1000	150	0.22	0.001	2.21
475Hz (High)	27	92	125	0.1	0.0001	3.3

### Crystal Characteristics

$\theta_{JA}$ vs. Air Flow			
Meters per Second	0	1	2.5
Multi-Layer PCB, JEDEC Standard Test Boards	37.0°C/W	32.4°C/W	29°C/W

### Transistor Count

The transistor count for 810001-21 is: 9365

## Package Outline and Package Dimensions

### Package Outline - K Suffix for 32 Lead VFQFN

There are 2 methods of indicating pin 1 corner at the back of the VFQFN package:

1. Type A: Chamfer on the paddle (near pin 1)
2. Type C: Mouse bite on the paddle (near pin 1)

Table 7. Package Dimensions

JEDEC Variation: VHHD-2/-4 All Dimensions in Millimeters			
Symbol	Minimum	Nominal	Maximum
N	32		
A	0.80		1.00
A1	0		0.05
A3	0.25 Ref.		
b	0.18	0.25	0.30
$N_D \& N_E$			8
D & E	5.00 Basic		
D2 & E2	3.0		3.3
e	0.50 Basic		
L	0.30	0.40	0.50

Reference Document: JEDEC Publication 95, MO-220

NOTE: The following package mechanical drawing is a generic drawing that applies to any pin count VFQFN package. This drawing is not intended to convey the actual pin count or pin layout of this device. The pin count and pinout are shown on the front page. The package dimensions are in Table 7.

## Ordering Information

**Table 8. Ordering Information**

Part/Order Number	Marking	Package	Shipping Packaging	Temperature
810001DK-21LF	ICS0001D21L	"Lead-Free" 32 Lead VFQFN	Tray	0°C to 70°C
810001DK-21LFT	ICS0001D21L	"Lead-Free" 32 Lead VFQFN	Tape & Reel	0°C to 70°C

## Revision History Sheet

Rev	Table	Page	Description of Change	Date
B	T4B	8 10 14 15 16	LVC MOS DC Characteristics Table - corrected typo in $V_{IH}$ row from 3V min. to 2V min. Parameter Measurement Information - updated 3.3V Load AC Test Circuit Diagram. Replaced 4th paragraph in <i>VCXO-PLL External Components</i> section. Crystal Characteristics Table - added 3rd Overtone specs. Updated VFQFN Package Outline. Updated datasheet Header/Footer.	4/13/10
B	T8	17	Ordering Information - Removed leaded devices. Updated data sheet format	4/23/15
B	T8	17	Ordering Information - Deleted LF note below table. Removed quantity from tape and reel. Updated data sheet header and footer.	3/3/16

## Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
  2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
  3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
  4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
  5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
    - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
    - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
  6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
  7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
  8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
  9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
  10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
  11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
  12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.
- (Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.
- (Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

(Rev.4.0-1 November 2017)
