

General Description

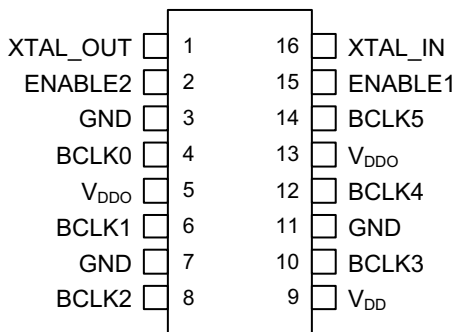

The 83905-01 is a low skew, 1-to-6 LVCMOS Fanout Buffer. The low impedance LVCMOS outputs are designed to drive 50Ω series or parallel terminated transmission lines. The effective fanout can be increased from 6 to 12 by utilizing the ability of the outputs to drive two series terminated lines.

The 83905-01 is characterized at full 1.8V, 1.5V, and 1.2V, mixed 1.8V/1.5V, 1.8V/1.2V and 1.5V/1.2V output operating supply mode. Guaranteed output skew characteristics along with the 1.2V output capabilities makes the 83905-01 ideal for high performance, single ended applications that also require a limited output voltage.

Pin Assignments

20-pin, 4mm x 4mm VFQFN Package

83905-01

16-pin, 4.4mm x 5.0mm TSSOP Package

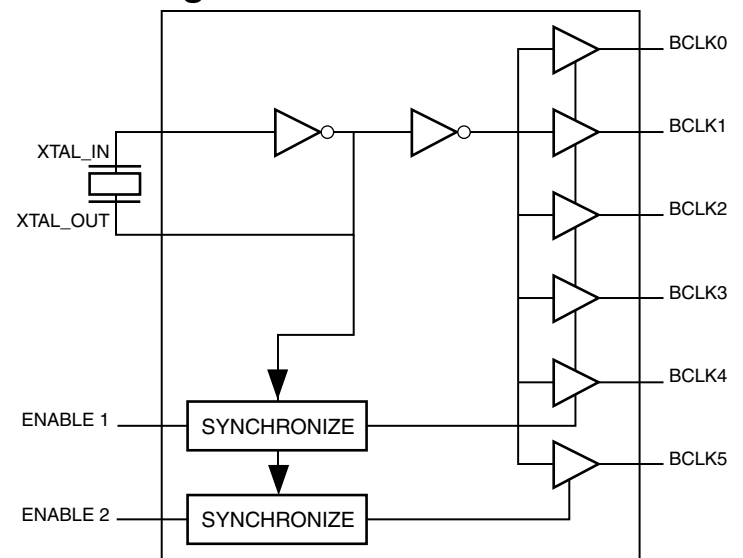

Features

- Six LVCMOS outputs
- Outputs able to drive 12 series terminated lines
- Crystal Oscillator Interface
- Crystal input frequency range: 10MHz to 40MHz
- Output skew: 95ps (maximum)
- RMS phase jitter @ 25MHz, (100Hz – 1MHz): 0.17ps (typical)

Offset	Noise Power
100Hz.....	-115 dBc/Hz
1kHz.....	-138 dBc/Hz
10kHz.....	-154 dBc/Hz
100kHz.....	-160 dBc/Hz

- Synchronous output enables
- Power supply modes: Full 1.8V, 1.5V, 1.2V
Mixed 1.8V core/1.5V output operating supply
Mixed 1.8V core/1.2V output operating supply
Mixed 1.5V core/1.2V output operating supply
- 0°C to 70°C ambient operating temperature
- Available in lead-free (RoHS 6) package

Block Diagram

Pin Descriptions and Characteristics

Table 1. Pin Descriptions

Name	Type	Description
XTAL_OUT	Output	Crystal oscillator interface.
XTAL_IN	Input	Crystal oscillator interface.
ENABLE1, ENABLE2	Input	Clock enable. LVCMOS/LVTTL interface levels. See Table 3.
BCLK0, BCLK1, BCLK2, BCLK3, BCLK4, BCLK5	Output	Clock outputs. LVCMOS interface levels.
GND	Power	Power supply ground.
V _{DD}	Power	Power supply pin.
V _{DDO}	Power	Output supply pin.
nc	Unused	No connect.

Table 2. Pin Characteristics

Symbol	Parameter	Test Conditions	Minimum	Typical	Maximum	Units
C _{IN}	Input Capacitance	ENABLE[2:1]		4		pF
C _{PD}	Power Dissipation Capacitance (per output)	V _{DDO} = 2.0V		12		pF
		V _{DDO} = 1.6V		12		pF
		V _{DDO} = 1.26V		12		pF
R _{OUT}	Output Impedance	V _{DDO} = 1.8V ± 0.2V		17		Ω
		V _{DDO} = 1.5V ± 0.1V		18		Ω
		V _{DDO} = 1.2V ± 5%		24		Ω

Function Table

Table 3. Clock Enable Function Table

Control Inputs		Outputs	
ENABLE 1	ENABLE2	BCLK[0:4]	BCLK5
0	0	LOW	LOW
0	1	LOW	Toggling
1	0	Toggling	LOW
1	1	Toggling	Toggling

Absolute Maximum Ratings

NOTE: Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These ratings are stress specifications only. Functional operation of product at these conditions or any conditions beyond those listed in the *DC Characteristics* or *AC Characteristics* is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.

Item	Rating
Supply Voltage, V_{DD}	4.6V
Inputs, V_I	-0.5V to $V_{DD} + 0.5V$
Input, V_I Crystal Oscillator Input	0V to V_{DD}
Outputs, V_O	-0.5V to $V_{DDO} + 0.5V$
Package Thermal Impedance, T_J	125°C
Storage Temperature, T_{STG}	-65°C to 150°C

Recommendations for Unused Output Pins

Outputs:

LVC MOS Outputs

All unused LVC MOS output can be left floating. There should be no trace attached.

Crystal Input Interface

The 83905-01 has been characterized with 18pF parallel resonant crystals. The capacitor values, C1 and C2, shown in *Figure 2* below were determined using an 18pF parallel resonant crystal and were

chosen to minimize the ppm error. The optimum C1 and C2 values can be slightly adjusted for different board layouts.

Figure 2. Crystal Input Interface

Overdriving the XTAL Interface

The XTAL_IN input can be overdriven by an LVCMOS driver or by one side of a differential driver through an AC coupling capacitor. The XTAL_OUT pin can be left floating. The amplitude of the input signal should be between 500mV and 1.8V and the slew rate should not be less than 0.2V/ns. For 3.3V LVCMOS inputs, the amplitude must be reduced from full swing to at least half the swing in order to prevent signal interference with the power rail and to reduce internal noise. *Figure 3A* shows an example of the interface diagram for a high speed 3.3V LVCMOS driver. This configuration requires that the sum of the output impedance of the driver (R_o) and the series resistance (R_s) equals the transmission line impedance. In addition, matched termination at the crystal input will attenuate the signal in half. This

can be done in one of two ways. First, R_1 and R_2 in parallel should equal the transmission line impedance. For most 50Ω applications, R_1 and R_2 can be 100Ω. This can also be accomplished by removing R_1 and changing R_2 to 50Ω. The values of the resistors can be increased to reduce the loading for a slower and weaker LVCMOS driver. *Figure 3B* shows an example of the interface diagram for an LVPECL driver. This is a standard LVPECL termination with one side of the driver feeding the XTAL_IN input. It is recommended that all components in the schematics be placed in the layout. Though some components might not be used, they can be utilized for debugging purposes. The datasheet specifications are characterized and guaranteed by using a quartz crystal as the input.

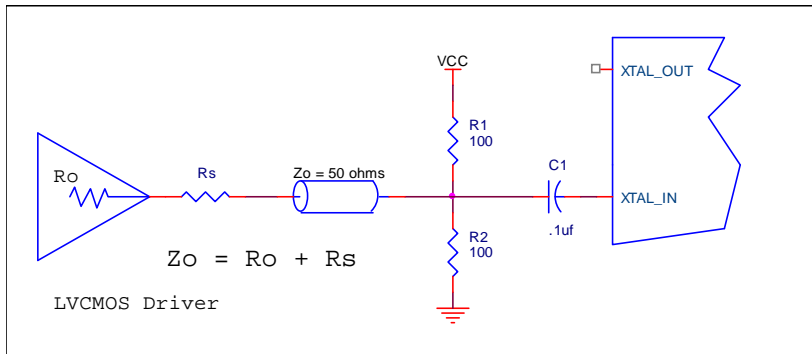

Figure 3A. General Diagram for LVCMOS Driver to XTAL Input Interface

Figure 3B. General Diagram for LVPECL Driver to XTAL Input Interface

Schematic Example

Figure 4 shows an example of the 83905-01 application schematic. In this example, the device is operated at $V_{DD} = V_{DDO} = 1.8V$. The decoupling capacitors should be located as close as possible to the power pin. The input is driven by an 18pF load resonant quartz crystal. The tuning capacitors C1 and C2 are fairly accurate, but

minor adjustments might be required. For the LVCMOS output drivers, two termination examples are shown in this schematic. For additional termination examples, see LVCMOS Termination Application Note.

Figure 4. 83905-01 Schematic Layout

Power Considerations

This section provides information on power dissipation and junction temperature for the 83905-01. Equations and example calculations are also provided.

1. Power Dissipation.

The total power dissipation for the 83905-01 is the sum of the core power plus the analog power plus the power dissipated due to the load. The following is the power dissipation for $V_{DD} = 1.8V + 0.2V = 2.0V$, which gives worst case results.

- Power (core)_{MAX} = $V_{DD_MAX} * I_{DD} = 2V * 10mA = \mathbf{20mW}$
- Output Impedance R_{OUT} Power Dissipation due to Loading 50Ω to $V_{DD}/2$
Output Current $I_{OUT} = V_{DD_MAX} / [2 * (50\Omega + R_{OUT})] = 2V / [2 * (50\Omega + 17\Omega)] = \mathbf{14.9mA}$
- Power Dissipation on the R_{OUT} per LVC MOS output
Power (R_{OUT}) = $R_{OUT} * (I_{OUT})^2 = 17\Omega * (14.9mA)^2 = \mathbf{3.8mW}$ per output
- Total Power Dissipation on the R_{OUT}
Total Power (R_{OUT}) = $3.8mW * 6 = \mathbf{22.8mW}$

Dynamic Power Dissipation at 100MHz

$$\text{Power (100MHz)} = C_{PD} * \text{Frequency} * (V_{DD})^2 = 12pF * 100MHz * (2V)^2 = \mathbf{4.8mW}$$
 per output
Total Power (100MHz) = $4.8mW * 6 = \mathbf{28.8mW}$

Total Power Dissipation

- **Total Power**
= Power (core)_{MAX} + Total Power (R_{OUT}) + Total Power (100MHz)
= $20mW + 22.8mW + 28.8mW$
= **71.6mW**

2. Junction Temperature.

Junction temperature, T_j , is the temperature at the junction of the bond wire and bond pad and directly affects the reliability of the device. The maximum recommended junction temperature is 125°C .

The equation for T_j is as follows: $T_j = \theta_{JA} * Pd_{total} + T_A$

T_j = Junction Temperature

θ_{JA} = Junction-to-Ambient Thermal Resistance

Pd_{total} = Total Device Power Dissipation (example calculation is in section 1 above)

T_A = Ambient Temperature

In order to calculate junction temperature, the appropriate junction-to-ambient thermal resistance θ_{JA} must be used. Assuming no air flow and a multi-layer board, the appropriate value is 100.3°C/W per Table 7 below.

Therefore, T_j for an ambient temperature of 70°C with all outputs switching is:

$$70^\circ\text{C} + 0.072W * 100.3^\circ\text{C/W} = 77.2^\circ\text{C}. \text{ This is below the limit of } 125^\circ\text{C}.$$

This calculation is only an example. T_j will obviously vary depending on the number of loaded outputs, supply voltage, air flow and the type of board (multi-layer).

Table 7. Thermal Resistance θ_{JA} for 16-Lead TSSOP, Forced Convection

Meters per Second	θ_{JA} by Velocity

16-Lead TSSOP Package Outline and Package Dimensions

Package Outline - G Suffix for 16-Lead TSSOP

Table 9A. Package Dimensions for 16-Lead TSSOP

All Dimensions in Millimeters		
Symbol	Minimum	Maximum
N	16	
A		1.20
A1	0.05	0.15
A2	0.80	1.05
b	0.19	0.30
c	0.09	0.20
D	4.90	5.10
E	6.40 Basic	
E1	4.30	4.50
e	0.65 Basic	
L	0.45	0.75
α	0°	8°
aaa		0.10

Reference Document: JEDEC Publication 95, MO-153

20-Lead VFQFN Package Outline and Package Dimensions

Package Outline - K Suffix for 20-Lead VFQFN

Table 9C. Package Dimensions for 20-Lead VFQFN

All Dimensions in Millimeters			
Symbol	Minimum	Nom	Maximum
b	0.20	0.25	0.30
D	3.90	4.00	4.10
E	3.90	4.00	4.10
D2	1.95	2.10	2.25
E2	1.95	2.10	2.25
L	0.45	0.55	0.65
e	0.50 BSC		
N	20		
A	0.80	0.90	1.00
A1	0.00	0.02	0.05
A3	0.2 REF		

Reference Document: JEDEC Publication 95, MO-220

NOTE:

The drawing and dimension data originate from IDT package outline drawing PSC-4170, rev03.

1. Dimensions and tolerances conform to ASME Y14.5M-1994
2. All dimensions are in millimeters. All angles are in degrees.
3. N is the total number of terminals.
4. All specifications comply with JEDEC MO-220.

Ordering Information

Table 10. Ordering Information

Part/Order Number	Marking	Package	Shipping Packaging	Temperature
83905AG-01LF	3905A01L	16-Lead TSSOP, Lead-Free	Tube	0°C to 70°C
83905AG-01LFT	3905A01L	16-Lead TSSOP, Lead-Free	Tape & Reel	0°C to 70°C
83905AK-01LF	5A01L	20-Lead VFQFN, Lead-Free	Tray	0°C to 70°C
83905AK-01LFT	5A01L	20-Lead VFQFN, Lead-Free	Tape & Reel	0°C to 70°C

NOTE: Parts that are ordered with an "LF" suffix to the part number are the Pb-Free configuration and are RoHS compliant.

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
