

## GENERAL DESCRIPTION

The 889474 is a high speed 2-to-1 differential multiplexer with integrated 2 output LVDS fanout buffer and internal termination and is a member of the family of high performance clock solutions from IDT. The 889474 is optimized for high speed and very low output skew, making it suitable for use in demanding applications such as SONET, 1 Gigabit and 10 Gigabit Ethernet, and Fibre Channel. The internally terminated differential input and  $V_{REF\_AC}$  pins allow other differential signal families such as LVPECL, LVDS, LVHSTL and CML to be easily interfaced to the input with minimal use of external components. The 889474 is packaged in a small 4mm x 4mm 24-pin VFQFN package which makes it ideal for use in space-constrained applications.

## FEATURES

- Two differential LVDS outputs
- INx, nINx pair can accept the following differential input levels: LVPECL, LVDS, LVHSTL, CML
- 50Ω internal input termination to  $V_T$
- Maximum output frequency: 2GHz (maximum)
- Additive phase jitter, RMS: 0.06ps (typical)
- Output skew: 20ps (maximum)
- Propagation delay: 700ps (maximum)
- 2.5V operating supply
- -40°C to 85°C ambient operating temperature
- Available in lead-free RoHS-complaint package

**TABLE 1. PIN DESCRIPTIONS**

Number	Name	Type		Description
1, 6, 9, 10, 13, 19, 24	$V_{DD}$	Power		Positive supply pins.
2, 20	nIN0, nIN1	Input		Inverting differential clock inputs. 50Ω internal input termination to $V_T$ .
3, 21	$V_{REF\_AC0}$ , $V_{REF\_AC1}$	Output		Reference voltage for AC-coupled applications.
4, 22	$V_{T0}$ , $V_{T1}$	Input		Termination inputs.
5, 23	IN0, IN1	Input		Non-inverting differential clock inputs. 50Ω internal input termination to $V_T$ .
7, 8	Q0, nQ0	Output		Differential output pair. LVDS interface levels.
11, 12	Q1, nQ1	Output		Differential output pair. LVDS interface levels.
14, 17, 18	GND	Power		Power supply ground.
15	SEL	Input	Pullup	Input select pin. LVCMOS/LVTTL interface levels.
16	nc	Unused		No connect.

NOTE: *Pullup* refers to internal input resistors. See Table 2, Pin Characteristics, for typical values.

## ABSOLUTE MAXIMUM RATINGS

Supply Voltage, $V_{DD}$	4.6V
Inputs, $V_I$	-0.5V to $V_{DD} + 0.5V$
Outputs, $I_O$ (LVDS)	
Continuous Current	10mA
Surge Current	15mA
Input Current, INx, nINx	$\pm 50\text{mA}$
$V_T$ Current, $I_{VT}$	$\pm 100\text{mA}$
Input Sink/Source, $I_{REF\_AC}$	$\pm 0.5\text{mA}$
Operating Temperature Range, $T_A$	-40°C to +85°C
Storage Temperature, $T_{STG}$	-65°C to 150°C
Package Thermal Impedance, $\theta_{JA}$ (Junction-to-Ambient)	49.5°C/W (0 mps)

NOTE: Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These ratings are stress specifications only. Functional operation of product at these conditions or any conditions beyond those listed in the *DC Characteristics* or *AC Characteristics* is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.

**TABLE 4A. POWER SUPPLY DC CHARACTERISTICS,  $V_{DD} = 2.5V \pm 5\%$ ;  $T_A = -40^\circ\text{C}$  TO  $85^\circ\text{C}$**

$tsk(pp)$	Part-to-Part Skew; NOTE 3, 4				200	ps
$t_{jit}$	Buffer Additive Phase Jitter, RMS; Refer to Additive Phase Jitter Section, NOTE 5	155.52MHz, 12kHz – 20MHz		0.06		ps
$MUX_{ISOLATION}$	Mux Isolation			55		dB
$t_R/t_F$	Output Rise/Fall Time	20% to 80%	70		220	ps

NOTE: All parameters are characterized at  $\leq 1GHz$  unless otherwise noted.

NOTE 1: Measured from the differential input crossing point to the differential output crossing point.

NOTE 2: Defined as skew between outputs at the same supply voltage and with equal load conditions. Measured at the output differential cross points.

NOTE 3: Defined as skew between outputs on different devices operating at the same supply voltages and with equal load conditions. Using the same type of inputs on each device, the outputs are measured at the differential cross points.

NOTE 4: This parameter is defined in accordance with JEDEC Standard 65.

NOTE 5: Driving only one input clock.

## ADDITIVE PHASE JITTER

The spectral purity in a band at a specific offset from the fundamental compared to the power of the fundamental is called the **dBc Phase Noise**. This value is normally expressed using a Phase noise plot and is most often the specified plot in many applications. Phase noise is defined as the ratio of the noise power present in a 1Hz band at a specified offset from the fundamental frequency to the power value of the fundamental. This ratio is expressed in decibels

(dBm) or a ratio of the power in the 1Hz band to the power in the fundamental. When the required offset is specified, the phase noise is called a **dBc** value, which simply means dBm at a specified offset from the fundamental. By investigating jitter in the frequency domain, we get a better understanding of its effects on the desired application over the entire time record of the signal. It is mathematically possible to calculate an expected bit error rate given a phase noise plot.

As with most timing specifications, phase noise measurements has issues relating to the limitations of the equipment. Often the noise floor of the equipment is higher than the noise floor of the device.

This is illustrated above. The device meets the noise floor of what is shown, but can actually be lower. The phase noise is dependent on the input source and measurement equipment.

## APPLICATION INFORMATION

### LVPECL INPUT WITH BUILT-IN 50Ω TERMINATIONS INTERFACE

The IN /nIN with built-in 50Ω terminations accepts LVDS, LVPECL, CML and other differential signals. The signal must meet the  $V_{PP}$  and  $V_{CMR}$  input requirements. Figures 1A to 1E show interface examples for the HiPerClockS IN/nIN input with built-in 50Ω terminations driven by the most common driver types. The

input interfaces suggested here are examples only. If the driver is from another vendor, use their termination recommendation. Please consult with the vendor of the driver component to confirm the driver termination requirements.

FIGURE 1A. HiPerClockS IN/nIN INPUT WITH BUILT-IN 50Ω DRIVEN BY AN LVDS DRIVER

FIGURE 1B. HiPerClockS IN/nIN INPUT WITH BUILT-IN 50Ω DRIVEN BY AN LVPECL DRIVER

FIGURE 1C. HiPerClockS IN/nIN INPUT WITH BUILT-IN 50Ω DRIVEN BY A CML DRIVER

FIGURE 1D. HiPerClockS IN/nIN INPUT WITH BUILT-IN 50Ω DRIVEN BY A CML DRIVER WITH BUILT-IN 50Ω PULLUP

FIGURE 1E. HiPerClockS IN/nIN INPUT WITH BUILT-IN 50Ω DRIVEN BY AN SSTL DRIVER

**RECOMMENDATIONS FOR UNUSED OUTPUT PINS**

**INPUTS:**

**IN/nIN INPUTS**

For applications not requiring the use of the differential input, both IN and nIN can be left floating. Though not required, but for additional protection, a 1kΩ resistor can be tied from IN to ground.

**OUTPUTS:**

**LVDS OUTPUTS**

All unused LVDS output pairs can be either left floating or terminated with 100Ω across. If they are left floating, there should be no trace attached.

**2.5V LVDS DRIVER TERMINATION**

Figure 2 shows a typical termination for LVDS driver in characteristic impedance of 100Ω differential (50Ω single)

transmission line environment. For buffer with multiple LVDS driver, it is recommended to terminate the unused outputs.

**FIGURE 2. TYPICAL LVDS DRIVER TERMINATION**

**2.5V DIFFERENTIAL INPUT WITH BUILT-IN 50Ω TERMINATION UNUSED INPUT HANDLING**

To prevent oscillation and to reduce noise, it is recommended to have pull up and pull down connect to true and compliment of the unused input as shown in Figure 3.

**FIGURE 3. UNUSED INPUT HANDLING**

### VFQFN EPAD THERMAL RELEASE PATH

In order to maximize both the removal of heat from the package and the electrical performance, a land pattern must be incorporated on the Printed Circuit Board (PCB) within the footprint of the package corresponding to the exposed metal pad or exposed heat slug on the package, as shown in *Figure 4*. The solderable area on the PCB, as defined by the solder mask, should be at least the same size/shape as the exposed pad/slug area on the package to maximize the thermal/electrical performance. Sufficient clearance should be designed on the PCB between the outer edges of the land pattern and the inner edges of pad pattern for the leads to avoid any shorts.

While the land pattern on the PCB provides a means of heat transfer and electrical grounding from the package to the board through a solder joint, thermal vias are necessary to effectively conduct from the surface of the PCB to the ground plane(s). The land pattern must be connected to ground through these vias. The vias act as “heat pipes”. The number of vias (i.e. “heat pipes”) are application

specific and dependent upon the package power dissipation as well as electrical conductivity requirements. Thus, thermal and electrical analysis and/or testing are recommended to determine the minimum number needed. Maximum thermal and electrical performance is achieved when an array of vias is incorporated in the land pattern. It is recommended to use as many vias connected to ground as possible. It is also recommended that the via diameter should be 12 to 13mils (0.30 to 0.33mm) with 1oz copper via barrel plating. This is desirable to avoid any solder wicking inside the via during the soldering process which may result in voids in solder between the exposed pad/slug and the thermal land. Precautions should be taken to eliminate any solder voids between the exposed heat slug and the land pattern. Note: These recommendations are to be used as a guideline only. For further information, refer to the Application Note on the *Surface Mount Assembly* of Amkor’s Thermally/Electrically Enhance Leadframe Base Package, Amkor Technology.

**FIGURE 4. P.C.ASSEMBLY FOR EXPOSED PAD THERMAL RELEASE PATH –SIDE VIEW (DRAWING NOT TO SCALE)**

## POWER CONSIDERATIONS

This section provides information on power dissipation and junction temperature for the 889474. Equations and example calculations are also provided.

### 1. Power Dissipation.

The total power dissipation for the 889474 is the sum of the core power plus the power dissipated in the load(s). The following is the power dissipation for  $V_{DD} = 2.625V$ , which gives worst case results.

**NOTE:** Please refer to Section 3 for details on calculating power dissipated in the load.

- Power (core)<sub>MAX</sub> =  $V_{DD\_MAX} * I_{DD\_MAX} = 2.625V * 80mA = \mathbf{210mW}$
- Power Dissipation at built-in terminations: Assume the input is driven by a 2.5V SSTL driver as shown in Figure 1E and estimated approximately 1.75V drop across IN and nIN.

Total Power Dissipation for the two 50Ω built-in terminations is:  $(1.75V)^2 / (50\Omega + 50\Omega) = \mathbf{30.6mW}$   
 Input pair for both inputs is  $2 * 30.6mW = 61.2mW$

**Total Power**<sub>MAX</sub> (2.625V, with all outputs switching) =  $210mW + 61.2mW = 271.2mW$

### 2. Junction Temperature.

Junction temperature, T<sub>j</sub>, is the temperature at the junction of the bond wire and bond pad and directly affects the reliability of the device. The maximum recommended junction temperature for HiPerClockS™ devices is 125°C.

The equation for T<sub>j</sub> is as follows:  $T_j = \theta_{JA} * Pd\_total + T_A$

T<sub>j</sub> = Junction Temperature

$\theta_{JA}$  = Junction-to-Ambient Thermal Resistance

Pd<sub>total</sub> = Total Device Power Dissipation (example calculation is in section 1 above)

T<sub>A</sub> = Ambient Temperature

In order to calculate junction temperature, the appropriate junction-to-ambient thermal resistance  $\theta_{JA}$  must be used. Assuming no air flow and a multi-layer board, the appropriate value is 49.5°C/W per Table 6 below.

Therefore, T<sub>j</sub> for an ambient temperature of 85°C with all outputs switching is:  
 $85^\circ C + 0.271W * 49.5^\circ C/W = 98.4^\circ C$ . This is well below the limit of 125°C.

This calculation is only an example. T<sub>j</sub> will obviously vary depending on the number of loaded outputs, supply voltage, air flow, and the type of board (single layer or multi-layer).

**TABLE 6. THERMAL RESISTANCE  $\theta_{JA}$  FOR 24-PIN VFQFN, FORCED CONVECTION**

$\theta_{JA}$ vs. 0 Velocity (Meters per Second)			
	0	1	2.5

## Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
  - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
  - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
