

Programmable Timing Control Hub™ for P4™

Recommended Application:

VIA Pro266/PN266/CLE266/CM400 chipset for PIII/Tualatin/C3 Processor

Output Features:

- 1 - Pair of differential CPU clocks @ 3.3V (CK408)/
- 1 - Pair of differential open drain CPU clocks (K7)
- 2 - Push pull CPUT_CS clocks @ 2.5V
- 3 - AGP @ 3.3V
- 7 - PCI @ 3.3V
- 1 - 48MHz @ 3.3V fixed
- 1 - 24_48MHz @ 3.3V
- 2 - REF @ 3.3V, 14.318MHz

Key Specifications:

- CPU_CS - CPUT/C: <±250ps
- CPU_CS - AGP: <±250ps
- CPU - DDR/SD: <±250ps
- PCI - PCI: <500ps

Features/Benefits:

- Programmable output frequency.
- Programmable output divider ratios.
- Programmable output rise/fall time.
- Programmable output skew.
- Programmable spread percentage for EMI control.
- Watchdog timer technology to reset system if system malfunctions.
- Programmable watch dog safe frequency.
- Support I²C Index read/write and block read/write operations.
- Uses external 14.318MHz crystal.

General Description

The **ICS950908** is a single chip clock solution for desktop designs using the VIA Pro266/PN266/CLE266/CM400 chipset with PC133 or DDR memory.

The **ICS950908** is part of a whole new line of ICS clock generators and buffers called TCH™ (Timing Control Hub). This part incorporates ICS's newest clock technology which offers more robust features and functionality. Employing the use of a serially programmable I²C interface, this device can adjust the output clocks by configuring the frequency setting, the output divider ratios, selecting the ideal spread percentage, the output skew, the output strength, and enabling/disabling each individual output clock. M/N control can configure output frequency with resolution up to 0.1MHz increment.

Pin Description

PIN #	PIN NAME	PIN TYPE	DESCRIPTION
1	*FS0/REF0	I/O	Frequency select latch input pin / 14.318 MHz reference clock.
2	GND	PWR	Ground pin.
3	X1	IN	Crystal input, Nominally 14.318MHz.
4	X2	OUT	Crystal output, Nominally 14.318MHz
5	VDDAGP	PWR	Power supply for AGP clocks, nominal 3.3V
6	*MODE/AGPCLK0	I/O	Function select latch input pin, 1=Desktop Mode, 0=Mobile Mode / AGP clock output.
7	*SEL_408/K7/AGPCLK1	I/O	CPU output type select latch input pin 0= K7, 1= CK408 / AGP clock output.
8	*(PCI_STOP#)AGPCLK2	I/O	Stops all PCICLKs besides the PCICLK_F clocks at logic 0 level, when input low. This input is activated by the MODE selection pin / AGP clock output.
9	GNDAGP	PWR	Ground pin for the AGP outputs
10	**FS1/PCICLK_F	I/O	Frequency select latch input pin / 3.3V PCI free running clock output.
11	**SEL_SDR/DDR#/PCICLK1	I/O	Memory type select latch input pin 0= DDR, 1= PC133 SDRAM / 3.3V PCI clock output.
12	*MULTSEL/PCICLK2	I/O	3.3V LVTTL input for selection the current multiplier for CPU outputs / 3.3V PCI clock output.
13	GNDPCI	PWR	Ground pin for the PCI outputs
14	PCICLK3	OUT	PCI clock output.
15	PCICLK4	OUT	PCI clock output.
16	VDDPCI	PWR	Power supply for PCI clocks, nominal 3.3V
17	PCICLK5	OUT	PCI clock output.
18	*(CLK_STOP#)/PCICLK6	I/O	Stops all CPU, DDR/SDRAM and FB_OUT clocks at logic 0 level, when input low. This input is activated by the MODE selection pin / PCI clock output.
19	GND48	PWR	Ground pin for the 48MHz outputs
20	*FS3/48MHz	I/O	Frequency select latch input pin / Fixed 48MHz clock output. 3.3V
21	*FS2/24_48MHz	I/O	Frequency select latch input pin / Fixed 24 or 48MHz clock output. 3.3V.
22	AVDD48	PWR	Analog power for 48MHz outputs and fixed PLL core, nominal 3.3V
23	VDD	PWR	Power supply, nominal 3.3V
24	GND	PWR	Ground pin.
25	IREF	OUT	This pin establishes the reference current for the differential current-mode output pairs. This pin requires a fixed precision resistor tied to ground in order to establish the appropriate current. 475 ohms is the standard value.
26	*(PD#)RESET#	I/O	Asynchronous active low input pin used to power down the device into a low power state. This input is activated by the MODE selection pin / Real time system reset signal for frequency gear ratio change or watchdog timer timeout. This signal is active low.
27	SCLK	IN	Clock pin of SMBus circuitry, 5V tolerant.
28	SDATA	I/O	Data pin for SMBus circuitry, 5V tolerant.

General I²C serial interface information

How to Write:

- Controller (host) sends a start bit.
- Controller (host) sends the write address D2_(H)
- ICS clock will **acknowledge**
- Controller (host) sends the beginning byte location = N
- ICS clock will **acknowledge**
- Controller (host) sends the data byte count = X
- ICS clock will **acknowledge**
- Controller (host) starts sending **Byte N through Byte N + X - 1**
(see Note 2)
- ICS clock will **acknowledge** each byte **one at a time**
- Controller (host) sends a Stop bit

How to Read:

- Controller (host) will send start bit.
- Controller (host) sends the write address D2_(H)
- ICS clock will **acknowledge**
- Controller (host) sends the beginning byte location = N
- ICS clock will **acknowledge**
- Controller (host) will send a separate start bit.
- Controller (host) sends the read address D3_(H)
- ICS clock will **acknowledge**
- ICS clock will send the data byte count = X
- ICS clock sends **Byte N + X - 1**
- ICS clock sends **Byte 0 through byte X (if X_(H) was written to byte 8).**
- Controller (host) will need to acknowledge each byte
- Controller (host) will send a not acknowledge bit
- Controller (host) will send a stop bit

Byte 12: VCO Frequency N Divider (VCO divider) Control Register

Bit	Name	PWD	Description
Bit 7	Ndiv 7	X	The decimal representation of Ndiv (8:0) correspond to the VCO divider value. Default at power up is equal to the latched inputs selector. Notice Ndiv 8 is located in Byte 11.
Bit 6	Ndiv 6	X	
Bit 5	Ndiv 5	X	
Bit 4	Ndiv 4	X

Bit 0	Ndiv 0	X	

Byte 13: Spread Spectrum Control Register

Bit	Name	PWD	Description
Bit 7	SS 7	X	The Spread Spectrum (12:0) bit will program the spread percentage. Spread percent needs to be calculated based on the VCO frequency, spreading profile, spreading amount and spread frequency. It is recommended to use ICS software for spread programming. Default power on is latched FS divider.

Absolute Maximum Ratings

Supply Voltage	5.5 V
Logic Inputs	GND -0.5 V to $V_{DD} + 0.5$ V
Ambient Operating Temperature	0°C to +70°C
Case Temperature	115°C
Storage Temperature	-65°C to +150°C

Stresses above those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These ratings are stress specifications only and functional operation of the device at these or any other conditions above those listed in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.

Shared Pin Operation - Input/Output Pins

The I/O pins designated by (input/output) serve as dual signal functions to the device. During initial power-up, they act as input pins. The logic level (voltage) that is present on these pins at this time is read and stored into a 5-bit internal data latch. At the end of Power-On reset, (see AC characteristics for timing values), the device changes the mode of operations for these pins to an output function. In this mode the pins produce the specified buffered clocks to external loads.

To program (load) the internal configuration register for these pins, a resistor is connected to either the VDD (logic 1) power supply or the GND (logic 0) voltage potential. A 10 Kiloohm (10K) resistor is used to provide both the solid CMOS programming voltage needed during the power-up programming period and to provide an insignificant load on the output clock during the subsequent operating period.

Figure 1 shows a means of implementing this function when a switch or 2 pin header is used. With no jumper is installed the pin will be pulled high. With the jumper in place the pin will be pulled low. If programmability is not necessary, than only a single resistor is necessary. The programming resistors should be located close to the series termination resistor to minimize the current loop area. It is more important to locate the series termination resistor close to the driver than the programming resistor.

Note

1. After PD# is sampled active (Low) for 2 consecutive rising edges of CPUCLKs, all the output clocks are driven Low on their next High to Low transition.
2. Power-up latency <3ms.

Ordering Information

ICS950908yGLF-T

Example:

ICS XXXX y G LF-T

- Designation for tape and reel packaging
- Lead Free (Optional)
- Package Type
G = TSSOP
- Revision Designator (will not correlate with datasheet revision)
- Device Type
- Prefix
ICS = Standard Device

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
