

Low Power Programmable Timing Control Hub™ for P4™ processor

Recommended Application:

Low Power CK505 Compliant Main Clock

Output Features:

- 2 - 0.8V push-pull differential CPU pairs
- 7 - 0.8V push-pull differential PCIEX pairs
- 1 - 0.8V push-pull differential SATA pair
- 1 - 0.8V push-pull differential CPU/PCIEX selectable pair
- 1 - 0.8V push-pull differential 27MHz/LCDCLK/PCIEX selectable pair
- 4 - PCI (33MHz)
- 2 - PCICLK_F, (33MHz) free-running
- 1 - USB, 48MHz
- 1 - DOT96/PCIEX selectable pair
- 2 - REF, 14.318MHz

Key Specifications:

- CPU outputs cycle-cycle jitter < 85ps
- PCIEX outputs cycle-cycle jitter < 125ps
- SATA outputs cycle-cycle jitter < 125ps
- PCI outputs cycle-cycle jitter < 500ps
- +/- 100ppm frequency accuracy on CPU, PCIEX and SATA clocks
- +/- 100ppm frequency accuracy on USB clocks

Features/Benefits:

- Supports tight ppm accuracy clocks for Serial-ATA and PCIEX
- Supports programmable spread percentage and frequency
- Uses external 14.318MHz crystal, external crystal load caps are required for frequency tuning
- PEREQ# pins to support PCIEX power management.
- Low power differential clock outputs (No 50Ω resistor to GND needed)
- iAMT support

Pin Description

PIN #	PIN NAME	TYPE	DESCRIPTION
1	VDDPCI	PWR	Power supply for PCI clocks, nominal 3.3V
2	GND	PWR	Ground pin.
3	PCICLK1	OUT	PCI clock output.
4	PCICLK2	OUT	PCI clock output.
5	*SELPCIEX0_LCD#/PCICLK3	#N/A	#N/A
6	GND	PWR	Ground pin.
7	VDDPCI	PWR	Power supply for PCI clocks, nominal 3.3V
8	ITP_EN/PCICLK_F4	I/O	Free running PCI clock not affected by PCI_STOP#. ITP_EN: latched input to select CPU_ITP/SRC output functionality 1 = CPU_ITP pair 0 = SRC pair
9	*SELLCD_27#/PCICLK_F5	I/O	Free running PCI clock not affected by PCI_STOP#. SELLCD_27#: latched input to select pin functionality. See Latch Select Table
10	VttPWR_GD/PD#	IN	This 3.3V LVTTTL input is a level sensitive strobe used to determine when latch inputs are valid and are ready to be sampled. This is an active high input. / Asynchronous active low input pin used to power down the device into a low power state.
11	VDD48	PWR	Power pin for the 48MHz output.3.3V
12	FSLA/USB_48MHz	I/O	3.3V tolerant input for CPU frequency selection. Refer to input electrical characteristics for Vil_FS and Vih_FS values. / Fixed 48MHz USB clock output. 3.3V.
13	GND	PWR	Ground pin.
14	PCleT_L9/DOTT_96MHzL	OUT	True clock of 0.8V differential push-pull PCI_Express pair / True clock of differential DOT96 output pair. (no 50ohm resistor to GND needed)
15	PCleC_L9/DOTC_96MHzL	OUT	Complement clock of 0.8V differential push-pull PCI_Express pair. / Complement clock of differential DOT96 push-pull output. (no 50ohm resistor to GND needed)
16	FSLB/TEST_MODE	IN	3.3V tolerant input for CPU frequency selection. Refer to input electrical characteristics for Vil_FS and Vih_FS values. TEST_MODE is a real time input to select between Hi-Z and REF/N divider mode while in test mode. Refer to Test Clarification Table.
17	27FIX/LCD_SSCGT/PCleT_L0	OUT	27MHz Non-Spread Push-Pull output / True clock of low power LCDCLK output / True clock of low power PCIEXCLK differential pair/ selected by SELPCIEX0_LCD# and SELLCD_27#. No 50ohm resistor to GND needed for differential outputs.
18	27SS/LCD_SSCGC/PCleC_L0	OUT	27MHz Spreading Push-Pull output / Complementary clock of LCDCLK_SS output / Complementary clock of PCIEXCLK differential pair/ selected by SELPCIEX0_LCD# and SELLCD_27#. No 50ohm resistor to GND needed for differential outputs.
19	PCleT_L1	OUT	True clock of 0.8V differential push-pull PCI_Express pair (no 50ohm resistor to GND needed)
20	PCleC_L1	OUT	Complement clock of 0.8V differential push-pull PCI_Express pair. (no 50ohm resistor to GND needed)
21	VDDPCIEX	PWR	Power supply for PCI Express clocks, nominal 3.3V
22	PCleT_L2	OUT	True clock of 0.8V differential push-pull PCI_Express pair (no 50ohm resistor to GND needed)
23	PCleC_L2	OUT	Complement clock of 0.8V differential push-pull PCI_Express pair. (no 50ohm resistor to GND needed)
24	PCleT_L3	OUT	True clock of 0.8V differential push-pull PCI_Express pair (no 50ohm resistor to GND needed)
25	PCleC_L3	OUT	Complement clock of 0.8V differential push-pull PCI_Express pair. (no 50ohm resistor to GND needed)
26	SATACLKT_L	OUT	True clock of 0.8V push-pull differential SATA pair. (no 50ohm resistor to GND needed)
27	SATACLKC_L	OUT	Complement clock of 0.8V push-pull differential SATA pair. (no 50ohm resistor to GND needed)
28	VDDPCIEX	PWR	Power supply for PCI Express clocks, nominal 3.3V
29	GND	PWR	Ground pin.
30	PCleT_L4	OUT	True clock of 0.8V differential push-pull PCI_Express pair (no 50ohm resistor to GND needed)
31	PCleC_L4	OUT	Complement clock of 0.8V differential push-pull PCI_Express pair. (no 50ohm resistor to GND needed)
32	*PEREQ3#	IN	Real-time input pin that controls PCIEXCLK outputs that are selected through the I2c. 1 = disabled, 0 = enabled.

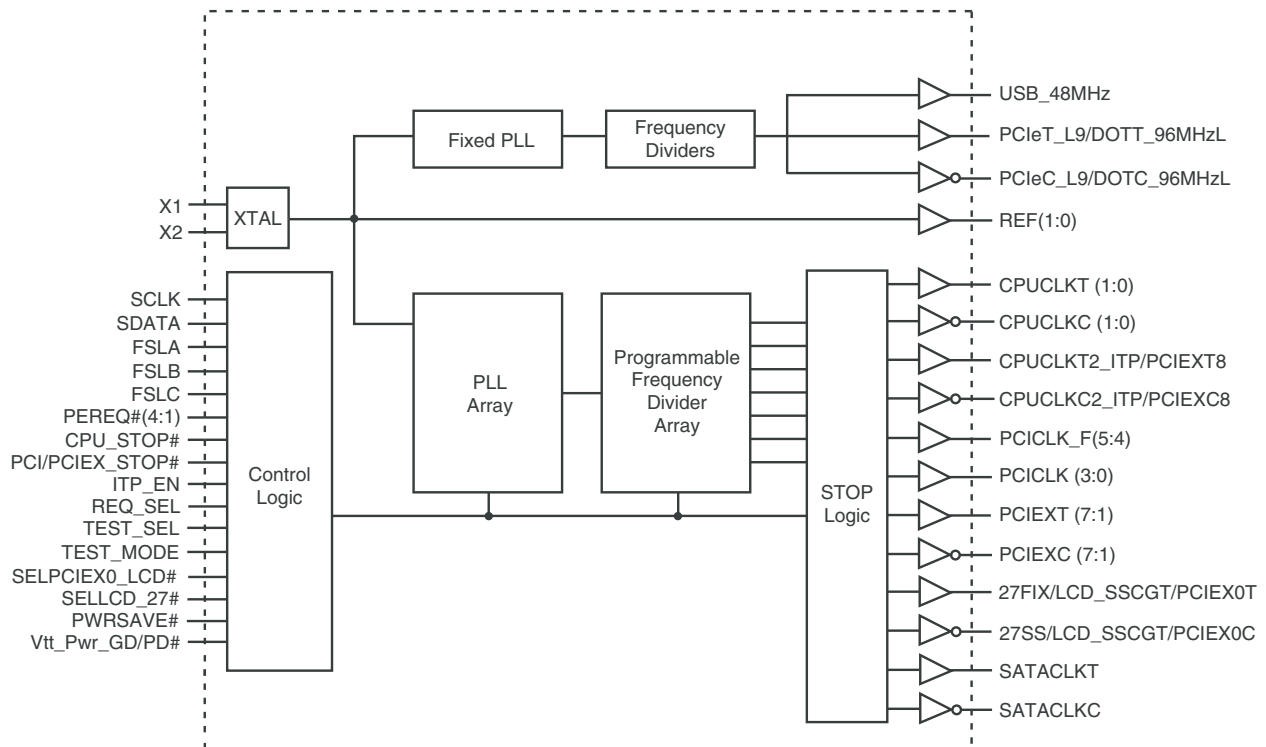

Pin Description (Continued)

PIN #	PIN NAME	TYPE	DESCRIPTION
33	PEREQ4#*	IN	Real-time input pin that controls PCIEXCLK outputs that are selected through the I2c. 1 = disabled, 0 = enabled.
34	PWRSAVE#*	IN	Active-low input pin used to change frequency to underclocked entries in the ROM table that can be pre-programmed through Byte 6 of the I2c.
35	PCleC_L5	OUT	Complement clock of 0.8V differential push-pull PCI_Express pair. (no 50ohm resistor to GND needed)
36	PCleT_L5	OUT	True clock of 0.8V differential push-pull PCI_Express pair (no 50ohm resistor to GND needed)
37	GND	PWR	Ground pin.
38	PCleC_L6	OUT	Complement clock of 0.8V differential push-pull PCI_Express pair. (no 50ohm resistor to GND needed)
39	PCleT_L6	OUT	True clock of 0.8V differential push-pull PCI_Express pair (no 50ohm resistor to GND needed)
40	PEREQ2#/PCleC_L7	I/O	Real-time input pin that controls PCIEXCLK outputs that are selected through the I2c. 1 = disabled, 0 = enabled. / Complement clock of differential low power PCI Express output. No 50ohm resistor to GND needed.
41	PEREQ1#/PCleT_L7	I/O	Real-time input pin that controls PCIEXCLK outputs that are selected through the I2c. 1 = disabled, 0 = enabled. / True clock of differential low power PCI Express output. No 50ohm resistor to GND needed.
42	VDDPCIEX	PWR	Power supply for PCI Express clocks, nominal 3.3V
43	CPUITPC_L2/PCleC_L8	OUT	Complement clock of differential pair CPU output. / Complement clock of differential PCIEX pair. These are 0.8V push pull outputs. No 50ohm resistor to GND needed.
44	CPUITPT_L2/PCleT_L8	OUT	True clock of differential pair CPU output. / True clock of differential PCIEX pair. These are 0.8V push pull outputs. No 50ohm resistor to GND needed.
45	VDDA	PWR	3.3V power for the PLL core.
46	GND	PWR	Ground pin for the PLL core.
47	VREF	PWR	Voltage reference for low power outputs.
48	CPUC_L1F	OUT	Complementary clock of differential pair of low power CPU outputs. Free running during iAMT. No 50ohm resistor to GND needed.
49	CPUT_L1F	OUT	True clock of differential pair of low power CPU outputs. Free running during iAMT. No 50ohm resistor to GND needed.
50	VDDCPU	PWR	Supply for CPU clocks, 3.3V nominal
51	CPUC_L0	OUT	Complementary clock of differential pair 0.8V push-pull CPU outputs. No 50ohm resistor to GND needed.
52	CPUT_L0	OUT	True clock of differential pair 0.8V push-pull CPU outputs. No 50ohm resistor to GND needed.
53	GND	PWR	Ground pin.
54	SCLK	IN	Clock pin of SMBus circuitry, 5V tolerant.
55	SDATA	I/O	Data pin for SMBus circuitry, 5V tolerant.
56	VDDREF	PWR	Ref, XTAL power supply, nominal 3.3V
57	X2	OUT	Crystal output, Nominally 14.318MHz
58	X1	IN	Crystal input, Nominally 14.318MHz.
59	GND	PWR	Ground pin.
60	REF0	OUT	14.318 MHz reference clock.
61	REF1/FSLC/TEST_SEL	I/O	14.318 MHz reference clock./ 3.3V tolerant input for CPU frequency selection. Refer to input electrical characteristics for Vi _L _FS and Vi _H _FS values. /TEST_Sel: 3-level latched input to enable test mode. Refer to Test Clarification Table
62	CPU_STOP#	IN	Stops all CPUCLK, except those set to be free running clocks
63	PCI/PCIEX_STOP#	IN	Stops all PCICLKs and PCIEXCLKs besides the free-running clocks at logic 0 level, when input low
64	PCICLK0/REQ_SEL**	I/O	3.3V PCI clock output / Latch select input pin. 0 = PCIEXCLK, 1 = PEREQ#

General Description

ICS9LPR363 is a low power CK505-compliant clock specification. This clock synthesizer provides a single chip solution for next generation P4 Intel processors and Intel chipsets. **ICS9LPR363** is driven with a 14.318MHz crystal.

Block Diagram

Note: 1. VREF is not connected unless differential amplitude needs to be tuned

Power Supply

PIN NUMBER		Description
VDD	GND	
1,7	2,6	PCICLK outputs
11	13	48MHz,96Mhz, LCDCLK, Fix Digital, Fix Analog
45	46	Master clock, CPU Analog
28, 42	21, 29, 37	PCIEXT/C outputs
50	53	CPUT/C output
56	59	Xtal, REF

Differential Amplitude control using VREF.

Rpull-up: Connected between Vref and Vdd=3.3V;

Rpull-down: Connected between Vref and GND

Keep Rpull-up=1K ohm and variable Rpull-down to measure CPU and PCIEX Vtop

Rpull-up (ohm)	Rpull-down (ohm)	CPU-T Vtop (mV)	PCIEX-T Vtop (mV)	SATA-T Vtop (mV)
1K	200	1155	1149	1136
1K	221	1092	1060	1063
1K	239	1054	1028	1040
1K	270	996	991	984
1K	301	943	946	931
1K	330	924	913	912
1K	360	898	888	885
1K	375	871	860	865
1K	390	867	837	822
1K	414	812	822	801

*Measurement based on Vtop-avg

**Test board trace impedance is 50ohms

General I²C serial interface information for the ICS9LPR363

How to Write:

- Controller (host) sends a start bit.
- Controller (host) sends the write address D2_(H)
- ICS clock will **acknowledge**
- Controller (host) sends the beginning byte location = N
- ICS clock will **acknowledge**
- Controller (host) sends the data byte count = X
- ICS clock will **acknowledge**
- Controller (host) starts sending **Byte N through Byte N + X - 1**
(see Note 2)
- ICS clock will **acknowledge** each byte **one at a time**
- Controller (host) sends a Stop bit

How to Read:

- Controller (host) will send start bit.
- Controller (host) sends the write address D2_(H)
- ICS clock will **acknowledge**
- Controller (host) sends the beginning byte location = N
- ICS clock will **acknowledge**
- Controller (host) will send a separate start bit.
- Controller (host) sends the read address D3_(H)
- ICS clock will **acknowledge**
- ICS clock will send the data byte count = X
- ICS clock sends **Byte N + X - 1**
- ICS clock sends **Byte 0 through byte X (if X_(H) was written to byte 8).**
- Controller (host) will need to acknowledge each byte
- Controller (host) will send a not acknowledge bit
- Controller (host) will send a stop bit

SRC[10:0] Skew	SRC_{SKEW}	Differential Measurement		TBD	ps	1

¹Guaranteed by design and characterization, not 100% tested in production.

²Slew rate measured through Vswing centered around differential zero

³Vxabs is defined as the voltage where CLK = CLK#

⁴Only applies to the differential rising edge (CLK rising and CLK# falling)

⁵Defined as the total variation of all crossing voltages of CLK rising and CLK# falling. Matching applies to rising edge rate of CLK and falling edge of CLK#.

It is measured using a +/-75mV window centered on the average cross point where CLK meets CLK#. The average cross point is used to calculate the voltage thresholds the oscilloscope is to use for the edge rate calculations.

Electrical Characteristics - PCICLK/PCICLK_F

	$t_{jvc-cyc}$	$V_T = 1.5$ V		170	500	ps	1

*TA = 0 - 70°C; Supply Voltage VDD = 3.3 V +/-5%, CL = 20 pF with Rs = 7Ω

¹Guaranteed by design and characterization, not 100% tested in production.

²All Long Term Accuracy and Clock Period specifications are guaranteed assuming that REFOUT is at 14.31818MHz

³At nominal voltage and temperature

Electrical Characteristics - REF-14.318MHz

PARAMETER	SYMBOL	CONDITIONS	MIN	MAX	UNITS	Notes
Long Accuracy	ppm	see T _{period} min-max values	-100	100	ppm	1,2
Clock period	T _{period}	14.318MHz output nominal	69.8203	69.8622	ns	2
Absolute min/max period	T _{abs}	14.318MHz output nominal	69.8203	70.86224	ns	2
Output High Voltage	V _{OH}	I _{OH} = -1 mA	2.4		V	1
Output Low Voltage	V _{OL}	I _{OL} = 1 mA		0.4	V	1
Output High Current	I _{OH}	V _{OH} @MIN = 1.0 V, V _{OH} @MAX = 3.135 V	-33	-33	mA	1
Output Low Current	I _{OL}	V _{OL} @MIN = 1.95 V, V _{OL} @MAX = 0.4 V	30	38	mA	1
Rising Edge Slew Rate	t _{SLR}	Measured from 0.8 to 2.0 V	1	4	V/ns	1
Falling Edge Slew Rate	t _{FLR}	Measured from 2.0 to 0.8 V	1	4	V/ns	1
Duty Cycle	d _{t1}	V _T = 1.5 V	45	55	%	1
Jitter	t _{TCYC-CYC}	V _T = 1.5 V		1000	ps	1

¹Guaranteed by design and characterization, not 100% tested in production.

²All Long Term Accuracy and Clock Period specifications are guaranteed assuming that REFOUT is at 14.31818MHz

Ordering Information

9LPR363yGLFT

Example:

XXXX y G LFT

- Designation for tape and reel packaging
- Lead Free, RoHS Compliant (Optional)
- Package Type
G = TSSOP
- Revision Designator (will not correlate with datasheet revision)
- Device Type

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
