

General Description

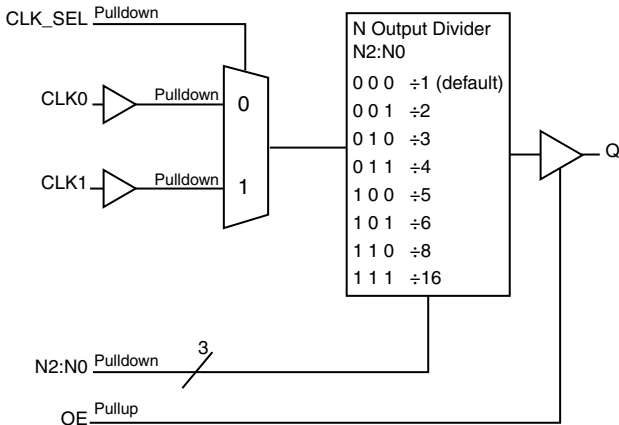

The ICS87001I-01 is a low skew, $\div 1$, $\div 2$, $\div 3$, $\div 4$, $\div 5$, $\div 6$, $\div 8$, $\div 16$ LVC MOS/LVTTL Clock Divider. The ICS87001I-01 has selectable clock inputs that accept single ended input levels. Output enable pin controls whether the output is in the active or high impedance state.

The ICS87001I-01 is characterized at 3.3V, 2.5V and mixed 3.3V/2.5V, 3.3V/1.8V, 2.5V/1.8V input/output supply operating modes. Guaranteed part-to-part skew characteristics make the ICS87001I-01 ideal for those applications demanding well defined performance and repeatability.

Features

- One LVC MOS / LVTTL output
- Selectable LVC MOS / LVTTL clock inputs
- Maximum output frequency: 250MHz
- Part-to-part skew: 135ps (typical)
- Power supply modes:
Core/Output
3.3V/3.3V
3.3V/2.5V
3.3V/1.8V
2.5V/2.5V
2.5V/1.8V
- -40°C to 85°C ambient operating temperature
- Available in lead-free (RoHS 6) package

Table 1. Pin Descriptions

Number	Name	Type		Description
1	OE	Input	Pullup	Output enable. When LOW, output is in HIGH impedance state. When HIGH, outputs are active. LVCMOS / LVTTL interface levels.
2	V _{DD}	Power		Power supply pin.
3, 5	CLK0, CLK1	Input	Pulldown	Single-ended clock inputs. LVCMOS/LVTTL interface levels.
4	CLK_SEL	Input	Pulldown	Input clock selection. When HIGH, selects CLK1 input. When LOW, selects CLK0 input. LVCMOS / LVTTL interface levels.
6, 7, 8	N2, N1, N0	Input	Pulldown	Output divider select pins. LVCMOS/LVTTL interface levels. See Table 3.
9, 12	GND	Power		Power supply ground.
10, 11, 13, 15	nc	Unused		No connect.
14	Q	Output		Single-ended clock output. LVCMOS/LVTTL interface levels.
16	V _{DDO}	Power		Output supply pin.

NOTE: *Pullup and Pulldown* refer to internal input resistors. See Table 2, *Pin Characteristics*, for typical values.

Table 2. Pin Characteristics

Symbol	Parameter	Test Conditions	Minimum	Typical	Maximum	Units
C _{IN}	Input Capacitance			4		pF
R _{PULLUP}	Input Pullup Resistor			51		kΩ
R _{PULLDOWN}	Input Pulldown Resistor			51		kΩ
C _{PD}	Power Dissipation Capacitance	V _{DDO} = 3.465V		6		pF
		V _{DDO} = 2.625V		5		pF
		V _{DDO} = 1.95V		5		pF
R _{OUT}	Output Impedance	V _{DDO} = 3.3V±5%		17		Ω
		V _{DDO} = 2.5V±5%		20		Ω
		V _{DDO} = 1.8V±0.15V		28		Ω

Function Table

Table 3. Programmable Output Divider Function Table

Inputs			N Divider Value	Maximum Output Frequency (MHz)
N2	N1	N0		
0	0	0	÷1 (default)	250
0	0	1	÷2	125
0	1	0	÷3	83.333
0	1	1	÷4	62.5
1	0	0	÷5	50
1	0	1	÷6	41.667
1	1	0	÷8	31.25
1	1	1	÷16	15.625

Absolute Maximum Ratings

NOTE: Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These ratings are stress specifications only. Functional operation of product at these conditions or any conditions beyond those listed in the *DC Characteristics* or *AC Characteristics* is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.

Item	Rating
Supply Voltage, V_{DD}	4.6V
Inputs, V_I	-0.5V to $V_{DD} + 0.5V$
Outputs, V_O	-0.5V to $V_{DDO} + 0.5V$
Package Thermal Impedance, θ_{JA}	100.3°C/W (0 mps)
Storage Temperature, T_{STG}	-65°C to 150°C

DC Electrical Characteristics

Applications Information

Recommendations for Unused Input Pins

Inputs:

CLK Inputs

For applications not requiring the use of a clock input, it can be left floating. Though not required, but for additional protection, a 1k Ω resistor can be tied from the CLK input to ground.

LVCMOS Control Pins

All control pins have internal pullups or pulldowns; additional resistance is not required but can be added for additional protection. A 1k Ω resistor can be used.

Power Considerations

This section provides information on power dissipation and junction temperature for the ICS87001I-01. Equations and example calculations are also provided.

1. Power Dissipation.

The total power dissipation for the ICS87001I-01 is the sum of the core power plus the analog power plus the power dissipated in the load(s). The following is the power dissipation for $V_{DD} = 3.3V + 5\% = 3.465V$, which gives worst case results.

- Power (core)_{MAX} = $V_{DD_MAX} * I_{DD} = 3.465V * 55mA = \mathbf{190.6mW}$
- Power (output)_{MAX} = $V_{DDO_MAX} * I_{DDO} = 3.465V * 5mA = 17.3mW$

LVCMOS Output Power Dissipation

- Output Impedance R_{OUT} Power Dissipation due to Loading 50Ω to $V_{DD}/2$
Output Current $I_{OUT} = V_{DD_MAX} / [2 * (50\Omega + R_{OUT})] = 3.465V / [2 * (50\Omega + 17\Omega)] = \mathbf{25.9mA}$
- Power Dissipation on the R_{OUT} per LVCMOS output
Power (R_{OUT}) = $R_{OUT} * (I_{OUT})^2 = 17\Omega * (25.9mA)^2 = \mathbf{11.4mW}$
- Total Power (R_{OUT}) = $11.4mW * 1 = \mathbf{11.4mW}$

Dynamic Power Dissipation at f_{OUT_MAX} (250MHz)

$$\text{Power (250MHz)} = C_{PD} * \text{Frequency} * (V_{DDO})^2 = 6pF * 250MHz * (3.465V)^2 = \mathbf{18mW \text{ per output}}$$

$$\text{Total Power (250MHz)} = 18mW * 1 = \mathbf{18mW}$$

Total Power Dissipation

- **Total Power**
= Power (core)_{MAX} + Power (output)_{MAX} + Total Power (R_{OUT}) + Total Power (250MHz)
= $190.6mW + 17.3mW + 11.4mW + 18mW$
= $\mathbf{237.3mW}$

2. Junction Temperature.

Junction temperature, T_j , is the temperature at the junction of the bond wire and bond pad directly affects the reliability of the device. The maximum recommended junction temperature is 125°C . Limiting the internal transistor junction temperature, T_j , to 125°C ensures that the bond wire and bond pad temperature remains below 125°C .

The equation for T_j is as follows: $T_j = \theta_{JA} * Pd_total + T_A$

T_j = Junction Temperature

θ_{JA} = Junction-to-Ambient Thermal Resistance

Pd_total = Total Device Power Dissipation (example calculation is in section 1 above)

T_A = Ambient Temperature

In order to calculate junction temperature, the appropriate junction-to-ambient thermal resistance θ_{JA} must be used. Assuming no air flow and a multi-layer board, the appropriate value is 100.3°C/W per Table 6 below.

Therefore, T_j for an ambient temperature of 85°C with all outputs switching is:

$$85^\circ\text{C} + 0.237W * 100.3^\circ\text{C/W} = 109^\circ\text{C}. \text{ This is below the limit of } 125^\circ\text{C}.$$

This calculation is only an example. T_j will obviously vary depending on the number of loaded outputs, supply voltage, air flow and the type of board (multi-layer).

Table 6. Thermal Resistance θ_{JA} for 16 Lead TSSOP, Forced Convection

θ_{JA} by Velocity			
Meters per Second	0	1	2.5

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
