

## General Description

The 5T9304 differential clock buffer has a user-selectable differential input to four LVDS outputs. The fanout from a differential input to four LVDS outputs reduces loading on the preceding driver and provides an efficient clock distribution network. The 5T9304 can act as a translator from a differential HSTL, eHSTL, LVEPECL (2.5V), LVPECL (3.3V), CML, or LVDS input to LVDS outputs. A single-ended 3.3V / 2.5V LVTTTL input can also be used to translate to LVDS outputs. The redundant input capability allows for an asynchronous change-over from a primary clock source to a secondary clock source. Selectable reference inputs are controlled by SEL.

The 5T9304 outputs can be asynchronously enabled/disabled. When disabled, the outputs will drive to the value selected by the GL pin. Multiple power and grounds reduce noise.

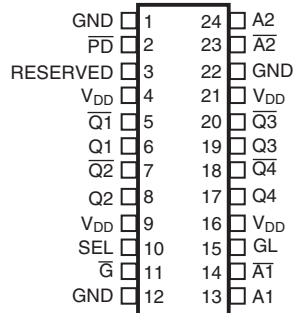

## Applications

- Clock distribution

## Features

- Guaranteed low skew: 50ps (maximum)
- Very low duty cycle distortion: 125ps (maximum)
- Propagation delay: 1.75ns (maximum)
- Up to 450MHz operation
- Selectable inputs
- Hot insertable and over-voltage tolerant inputs
- 3.3V/2.5V LVTTTL, HSTL eHSTL, LVEPECL (2.5V), LVPECL (3.3V), CML or LVDS input interface
- Selectable differential inputs to four LVDS outputs
- 2.5V V<sub>DD</sub>
- 0°C to 70°C ambient operating temperature
- Available in lead-free (RoHS 6) package

**Table 1. Pin Descriptions**

Number	Name	Type		Description
1, 12, 22	GND		Power	Power supply return for all power.
2	$\overline{\text{PD}}$	Input	LVTTL	Power-down control. Shuts off entire chip. If LOW, the device goes into low power mode. Inputs and outputs are disabled. Both Qx and $\overline{\text{Qx}}$ outputs will pull to VDD. Set HIGH for normal operation. <sup>(3)</sup>
3	RESERVED	Reserved		Reserved pin.
4, 9, 16, 21	V <sub>DD</sub>		Power	Power supply for the device core and inputs.
5, 7, 18, 20	$\overline{\text{Q1}}, \overline{\text{Q2}}, \overline{\text{Q4}}, \overline{\text{Q3}}$	Output	LVDS	Complementary differential clock outputs.
6, 8, 17, 19	Q1, Q2, Q4, Q3	Output	LVDS	Differential clock outputs.
10	SEL	Input	LVTTL	Reference clock select. When LOW, selects A2 and $\overline{\text{A2}}$ . When HIGH, selects A1 and $\overline{\text{A1}}$ .
11	$\overline{\text{G}}$	Input	LVTTL	Gate control for differential outputs Q1 and $\overline{\text{Q1}}$ through Q4 and $\overline{\text{Q4}}$ . When $\overline{\text{G}}$ is LOW, the differential outputs are active. When $\overline{\text{G}}$ is HIGH, the differential outputs are asynchronously driven to the level designated by GL <sup>(2)</sup> .
13, 24	A1, A2	Input	Adjustable <sup>(1, 4)</sup>	Clock input. A[1:2] is the "true" side of the differential clock input.
14, 23	$\overline{\text{A1}}, \overline{\text{A2}}$	Input	Adjustable <sup>(1, 4)</sup>	Complementary clock inputs. $\overline{\text{A[1:2]}}$ is the complementary side of A[1:2]. For LVTTL single-ended operation, $\overline{\text{A[1:2]}}$ should be set to the desired toggle voltage for A[1:2]: 3.3V LVTTL VREF = 1650mV 2.5V LVTTL VREF = 1250mV
15	GL	Input	LVTTL	Specifies output disable level. If HIGH, Qx outputs disable HIGH and $\overline{\text{Qx}}$ outputs disable LOW. If LOW, Qx outputs disable LOW and $\overline{\text{Qx}}$ outputs disable HIGH.

**NOTES:**

- Inputs are capable of translating the following interface standards:  
Single-ended 3.3V and 2.5V LVTTL levels  
Differential HSTL and eHSTL levels  
Differential LVEPECL (2.5V) and LVPECL (3.3V) levels  
Differential LVDS levels  
Differential CML levels
- Because the gate controls are asynchronous, runt pulses are possible. It is the user's responsibility to either time the gate control signals to minimize the possibility of runt pulses or be able to tolerate them in down stream circuitry.
- It is recommended that the outputs be disabled before entering power-down mode. It is also recommended that the outputs remain disabled until the device completes power-up after asserting  $\overline{\text{PD}}$ .
- The user must take precautions with any differential input interface standard being used in order to prevent instability when there is no input signal.

NOTE. Electrical parameters are guaranteed over the specified ambient operating temperature range, which is established when the device is mounted in a test socket with maintained transverse airflow greater than 500 lfm. The device will meet specifications after thermal equilibrium has been reached under these conditions.

NOTE 1. AC propagation measurements should not be taken within the first 100 cycles of startup.

NOTE 2. Skew measured between Crosspoint of all differential output pairs under identical input and output interfaces, transitions and load conditions on any one device.

NOTE 3. Skew measured is the difference between propagation delay times  $t_{pHL}$  and  $t_{pLH}$  of any differential output pair under identical input and output interfaces, transitions and load conditions on any one device.

NOTE 4. Skew measured is the magnitude of the difference in propagation times between any single differential output pair of two devices, given identical transitions and load conditions at identical  $V_{DD}$  levels and temperature.

NOTE 5. All parameters are tested with a 50% input duty cycle.

NOTE 6. Guaranteed by design but not production tested.

## Differential AC Timing Waveforms

### Output Propagation and Skew Waveforms

NOTE 1: Pulse skew is calculated using the following expression:

$$t_{sk(p)} = |t_{p_{HL}} - t_{p_{LH}}|$$

Note that the  $t_{p_{HL}}$  and  $t_{p_{LH}}$  shown above are not valid measurements for this calculation because they are not taken from the same pulse.

NOTE 2: AC propagation measurements should not be taken within the first 100 cycles of startup.

### Differential Gate Disabled/Endable Showing Runt Pulse Generation

NOTE 1: As shown, it is possible to generate runt pulses on gate disable and enable of the outputs. It is the user's responsibility to time the  $\overline{G}$  signal to avoid this problem.

**Power Down Timing**

NOTE 1: It is recommended that outputs be disabled before entering power-down mode. It is also recommended that the outputs remain disabled until the device completes power-up after asserting  $\overline{PD}$ .

NOTE 2: The *Power Down Timing* diagram assumes that GL is HIGH.

NOTE 3: It should be noted that during power-down mode, the outputs are both pulled to  $V_{DD}$ . In the *Power Down Timing* diagram this is shown when Qn/ $\overline{Qn}$  goes to  $V_{DIF} = 0$ .

NOTE 2: The scope inputs are assumed to have a 2pF load to ground.  $T_{IA}/E_{IA} - 644$  specifies 5pF between the output pair. With  $C_L = 8pF$ , this gives the test circuit appropriate 5pF equivalent load.

You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
  2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
  3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
  4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
  5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
    - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
    - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
  6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
  7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
  8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
  9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
  10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
  11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
