

General Description

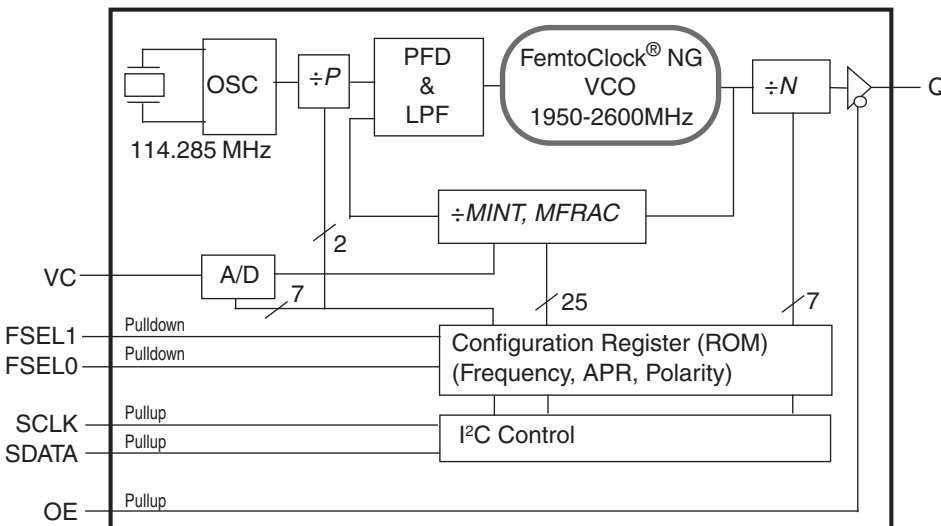

The 8N0QV01 is a Quad-Frequency Programmable VCXO with very flexible frequency and pull-range programming capabilities. The device uses IDT's Fourth Generation FemtoClock® NG technology for an optimum of high clock frequency and low phase noise performance. The device accepts 2.5V or 3.3V supply and is packaged in a small, lead-free (RoHS 6) 10-lead ceramic 5mm x 7mm x 1.55mm package.

Besides the four default power-up frequencies set by the FSEL0 and FSEL1 pins, the 8N0QV01 can be programmed via the I²C interface to any output clock frequency between 15.476MHz to 260MHz to a very high degree of precision with a frequency step size of 435.9Hz ÷ N (N: PLL post divider). Since the FSEL0 and FSEL1 pins are mapped to four independent PLL, P, M and N divider registers (P, MINT, MFRAC and N), reprogramming those registers to other frequencies under control of FSEL0 and FSEL1 is supported. The extended temperature range supports wireless infrastructure, telecommunication and networking end equipment requirements.

Features

- Fourth generation FemtoClock® NG technology
- Programmable clock output frequency from 15.476MHz to 260MHz
- Four power-up default frequencies (see part number order codes), re-programmable by I²C
- I²C programming interface for the output clock frequency, APR and internal PLL control registers
- Frequency programming resolution is 435.9Hz ÷ N
- Absolute pull-range (APR) programmable from ±2.5 to ±727.5ppm
- One 2.5V, 3.3V LVCMOS clock output
- Two control inputs for the power-up default frequency
- LVCMOS/LVTTL compatible control inputs
- RMS phase jitter @ 156.25MHz (12kHz - 20MHz): 0.635ps (typical)
- RMS phase jitter @ 156.25MHz (1kHz - 40MHz): 0.850ps (typical)
- 2.5V or 3.3V supply voltage modes
- -40°C to 85°C ambient operating temperature
- Lead-free (RoHS 6) packaging

Pin Description and Characteristics

Table 1. Pin Descriptions

Number	Name	Type		Description
1	VC	Input		VCXO Control Voltage. The control voltage versus frequency characteristics are set by the ADC_GAIN[5:0] register bits.
2	OE	Input	Pullup	Output enable pin. See Table 3B for function. LVCMOS/LVTTL interface levels.
3	GND	Power		Power supply ground.
5, 4	FSEL1, FSEL0	Input	Pulldown	Default frequency select pins. LVCMOS/LVTTL interface levels. Refer to the FemtoClock NG Ceramic-Package XO and VCXO Ordering Product Information document for default frequency order codes.
6	Q	Output		Clock output. LVCMOS/LVTTL interface levels.
7	DNU			Do not use. Do not connect.
8	V _{DD}	Power		Positive power supply.
9	SDATA	Input	Pullup	I ² C Data Input. LVCMOS/LVTTL interface levels.
10	SCLK	Input	Pullup	I ² C Clock Input. LVCMOS/LVTTL interface levels.

NOTE: *Pullup* and *Pulldown* refer to internal input resistors. See Table 2, *Pin Characteristics*, for typical values.

Table 2. Pin Characteristics

Symbol	Parameter	Test Conditions	Minimum	Typical	Maximum	Units
C _{IN}	Input Capacitance	FSEL[1:0], SDATA, SCLK, OE		3.5		pF
		VC		10		pF
C _{PD}	Power Dissipation Capacitance	V _{DD} = 3.465V or 2.625V		8		pF
R _{PULLUP}	Input Pullup Resistor			50		kΩ
R _{PULLDOWN}	Input Pulldown Resistor			50		kΩ
R _{OUT}	Output Impedance	Q	V _{DD} = 3.3V	15		Ω
			V _{DD} = 2.5V	19		Ω

Function Tables

Table 3A. Default Frequency Selection

Input		Operation
FSEL1	FSEL0	
0 (default)	0 (default)	Default frequency 0.
0	1	Default frequency 1.
1	0	Default frequency 2.
1	1	Default frequency 3.

NOTE: The default frequency is the output frequency after power-up. One of four default frequencies is selected by FSEL[1:0]. See programming section for details.

Table 3B. OE Configuration

Input	Output Enable
OE	
0	Output Q are in high-impedance state.
1 (default)	Outputs are enabled.

NOTE: OE is an asynchronous control.

Principles of Operation

The block diagram consists of the internal 3rd overtone crystal and oscillator which provide the reference clock f_{XTAL} of 114.285MHz. The PLL includes the FemtoClock NG VCO along with the pre-divider (P), the feedback divider (M) and the post divider (N). The P , M , and N dividers determine the output frequency based on the f_{XTAL} reference and must be configured correctly for proper operation. The feedback divider is fractional supporting a huge number of output frequencies. The configuration of the feedback divider to integer-only values results in an improved output phase noise characteristics at the expense of the range of output frequencies. In addition, internal registers are used to hold up to four different factory pre-set P , M , and N configuration settings. These default pre-sets are stored in the I²C registers at power-up. Each configuration is selected via the FSEL[1:0] pins and can be read back using the SCLK and SDATA pins.

The user may choose to operate the device at an output frequency different than that set by the factory. After power-up, the user may write new P , N and M settings into one or more of the four configuration registers and then use the FSEL[1:0] pins to select the newly programmed configuration. Note that the I²C registers are volatile and a power supply cycle will reload the pre-set factory default conditions.

If the user does choose to write a different P , M , and N configuration, it is recommended to write to a configuration which is not currently selected by FSEL[1:0] and then change to that configuration after the I²C transaction has completed. Changing the FSEL[1:0] controls results in an immediate change of the output frequency to the selected register values. The P , M , and N frequency configurations support an output frequency range 15.476MHz to 260MHz.

The devices use the fractional feedback divider with a delta-sigma modulator for noise shaping and robust frequency synthesis capability. The relatively high reference frequency minimizes phase noise generated by frequency multiplication and allows more efficient shaping of noise by the delta-sigma modulator.

The output frequency is determined by the 2-bit pre-divider (P), the feedback divider (M) and the 7-bit post divider (N). The feedback divider (M) consists of both a 7-bit integer portion ($MINT$) and an 18-bit fractional portion ($MFRAC$) and provides the means for high-resolution frequency generation. The output frequency f_{OUT} is calculated by:

$$f_{OUT} = f_{XTAL} \cdot \frac{1}{P \cdot N} \cdot \left[MINT + \frac{MFRAC + 0.5}{2^{18}} \right] \quad (1)$$

The four configuration registers for the P , M ($MINT$ & $MFRAC$) and N dividers which are named P_n , $MINT_n$, $MFRAC_n$ and N_n with $n = 0$ to 3. “n” denominates one of the four possible configurations.

As identified previously, the configurations of P , M ($MINT$ & $MFRAC$) and N divider settings are stored the I²C register, and the configuration loaded at power-up is determined by the FSEL[1:0] pins.

Table 4. Frequency Selection

Input		Selects	Register
FSEL1	FSEL0		
0 (def.)	0 (def.)	Frequency 0	P0, MINT0, MFRAC0, N0
0	1	Frequency 1	P1, MINT1, MFRAC1, N1
1	0	Frequency 2	P2, MINT2, MFRAC2, N2
1	1	Frequency 3	P3, MINT3, MFRAC3, N3

Frequency Configuration

An order code is assigned to each frequency and VCXO pull range configuration programmed by the factory (default frequencies). For available order codes, see the *FemtoClock NG Ceramic-Package XO and VCXO Ordering Product Information* document.

For more information and guidelines on programming of the device for custom frequency configurations, programming for a specific VCXO pull range, the available APR (absolute pull range), the register description and the serial interface description, see the *FemtoClock NG Ceramic 5x7 Module Programming Guide*.

Absolute Maximum Ratings

NOTE: Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These ratings are stress specifications only. Functional operation of the product at these conditions or any conditions beyond those listed in the *DC Characteristics* or *AC Characteristics* is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.

Item	Rating
Supply Voltage, V_{DD}	3.6V
Inputs, V_I	-0.5V to $V_{DD} + 0.5V$
Outputs, I_O (LVCMOS)	-0.5V to $V_{DD} + 0.5V$
Outputs, I_O (SDATA)	10mA
Package Thermal Impedance, θ_{JA}	49.4°C/W (mps)
Storage Temperature, T_{STG}	-65°C to 150°C

DC Electrical Characteristics

Table 5A. Power Supply DC Characteristics, $V_{DD} = 3.3V \pm 5\%$, $T_A = -40^\circ\text{C}$ to 85°C

Symbol	Parameter	Test Conditions	Minimum	Typical	Maximum	Units
V_{DD}	Supply Voltage		3.135	3.3	3.465	V
I_{DD}	Power Supply Current	No Load, OE = Low		135	150	mA

Table 5B. Power Supply DC Characteristics, $V_{DD} = 2.5V \pm 5\%$, $T_A = -40^\circ\text{C}$ to 85°C

Symbol	Parameter	Test Conditions	Minimum	Typical	Maximum	Units
V_{DD}	Supply Voltage		2.375	2.5	2.625	V
I_{DD}	Power Supply Current	No Load, OE = Low		130	145	mA

Table 5C. LVCMOS/LVTTL DC Characteristic, $V_{DD} = 3.3V \pm 5\%$ or $2.5V \pm 5\%$, $T_A = -40^{\circ}C$ to $85^{\circ}C$

Symbol	Parameter		Test Conditions	Minimum	Typical	Maximum	Units

		$V_{DD} = 2.5V, 20\% \text{ to } 80\%$	150	500	800	ps
odc	Output Duty Cycle		45	50	55	%
t_{OSC}	Oscillator Start-Up Time				20	ms
t_{SET}	Output frequency settling time after FSEL0 and FSEL1 values are changed				1	ms

NOTE: Electrical parameters are guaranteed over the specified ambient operating temperature range, which is established when the device is mounted in a test socket with maintained transverse airflow greater than 500 lpm. The device will meet specifications after thermal equilibrium has been reached under these conditions.

NOTE: All AC parameters are characterized with $P = 1$.

NOTES continued on next page.

NOTE: Please see the FemtoClock Ceramic 5x7 Modules Programming Guide for more information on PLL feedback modes and the optimum configuration for phase noise.

NOTE 1: This parameter is defined in accordance with JEDEC standard 65.

NOTE 2: Please refer to the phase noise plots.

NOTE 3: Applies to output frequencies: 17MHz, 19.44MHz, 25MHz, 33.33MHz, 75MHz, 77.76MHz, 100MHz, 106.25MHz, 122.88MHz, 125MHz, 150MHz, 155.52MHz, 156.25MHz, 161.132MHz, 175MHz, 187.5MHz, 200MHz, 212.5MHz, 250MHz and 260MHz.

Table 6B. VCXO Control Voltage Input (V_C) Characteristics,

Symbol	Parameter	Test Conditions	Minimum	Typical	Maximum	Units
K_V	Oscillator Gain, NOTE 1, 2, 3	$V_{DD} = 3.3V$	7.57		477.27	ppm/V
		$V_{DD} = 2.5V$	10		630	ppm/V
L_{VC}	Control Voltage Linearity; NOTE 4	BSL Variation	-5	± 0.4	+5	%
BW	Modulation Bandwidth			100		kHz
Z_{VC}	VC Input Impedance			500		k Ω
$V_{C_{NOM}}$	Nominal Control Voltage			$V_{DD}/2$		V
V_C	Control Voltage Tuning Range; NOTE 4	$V_{DD} = 3.3V \pm 5\%$ or $2.5V \pm 5\%$, $T_A = -40^\circ C$ to $85^\circ C$	0		V_{DD}	V

NOTE 1: $V_C = 0V$ to V_{DD} . Oscillator gain is programmed by IDT. Gain = $(25 \cdot n) \div V_{CC}$ and is in the range of $n=1$ to $n = 63$.

NOTE 2: Nominal oscillator gain: Please refer to the FemtoClock NG Ceramic 5x7 Module Programming Guide document.

NOTE 3: For best phase noise performance, use the lowest K_V that meets the requirements of the application.

NOTE 4: BSL = Best Straight Line Fit: Variation of the output frequency vs. control voltage V_C , in percent. V_C ranges from 10% to 90% V_{DD} .

Recommendations for Unused Input Pins

Inputs:

LVC MOS Select Pins

All control pins have internal pullups or pulldowns; additional resistance is not required but can be added for additional protection. A $1k\Omega$ resistor can be used.

Schematic Example

Figure 1 shows an example 8N0QV01 application schematic in which the device is operated at $V_{DD} = +3.3V$. The schematic example focuses on functional connections and is intended as an example only and may not represent the exact user configuration. Refer to the pin description and functional tables in the datasheet to ensure the logic control inputs are properly set. For example OE and FSEL[1:0] can be configured from an FPGA instead of set with pull up and pull down resistors as shown.

The 8N0QV01 is not a self contained part; it requires pairing with a PLL. The two connections necessary to be made to the PLL are VC, the analog control voltage that sets the center frequency of the VCXO, and Q, which is the oscillator output. VC is the analog output of the PLL low pass loop filter that serves to remove noise from the phase detector error output.

As with any high speed analog circuitry, the power supply pins are vulnerable to random noise, so to achieve optimum jitter performance isolation of the V_{DD} pin from the power supply is required. In order to

achieve the best possible filtering, it is recommended that the placement of the filter components be on the device side of the PCB as close to the power pins as possible. If space is limited, the $0.1\mu F$ capacitor on the V_{DD} pin must be placed on the device side with direct return to the ground plane though vias. The remaining filter components can be on the opposite side of the PCB.

Power supply filter component recommendations are a general guideline to be used for reducing external noise from coupling into the devices. The filter performance is designed for a wide range of noise frequencies. This low-pass filter starts to attenuate noise at approximately 10kHz. If a specific frequency noise component is known, such as switching power supplies frequencies, it is recommended that component values be adjusted and if required, additional filtering be added. Additionally, good general design practices for power plane voltage stability suggests adding bulk capacitance in the local area of all devices.

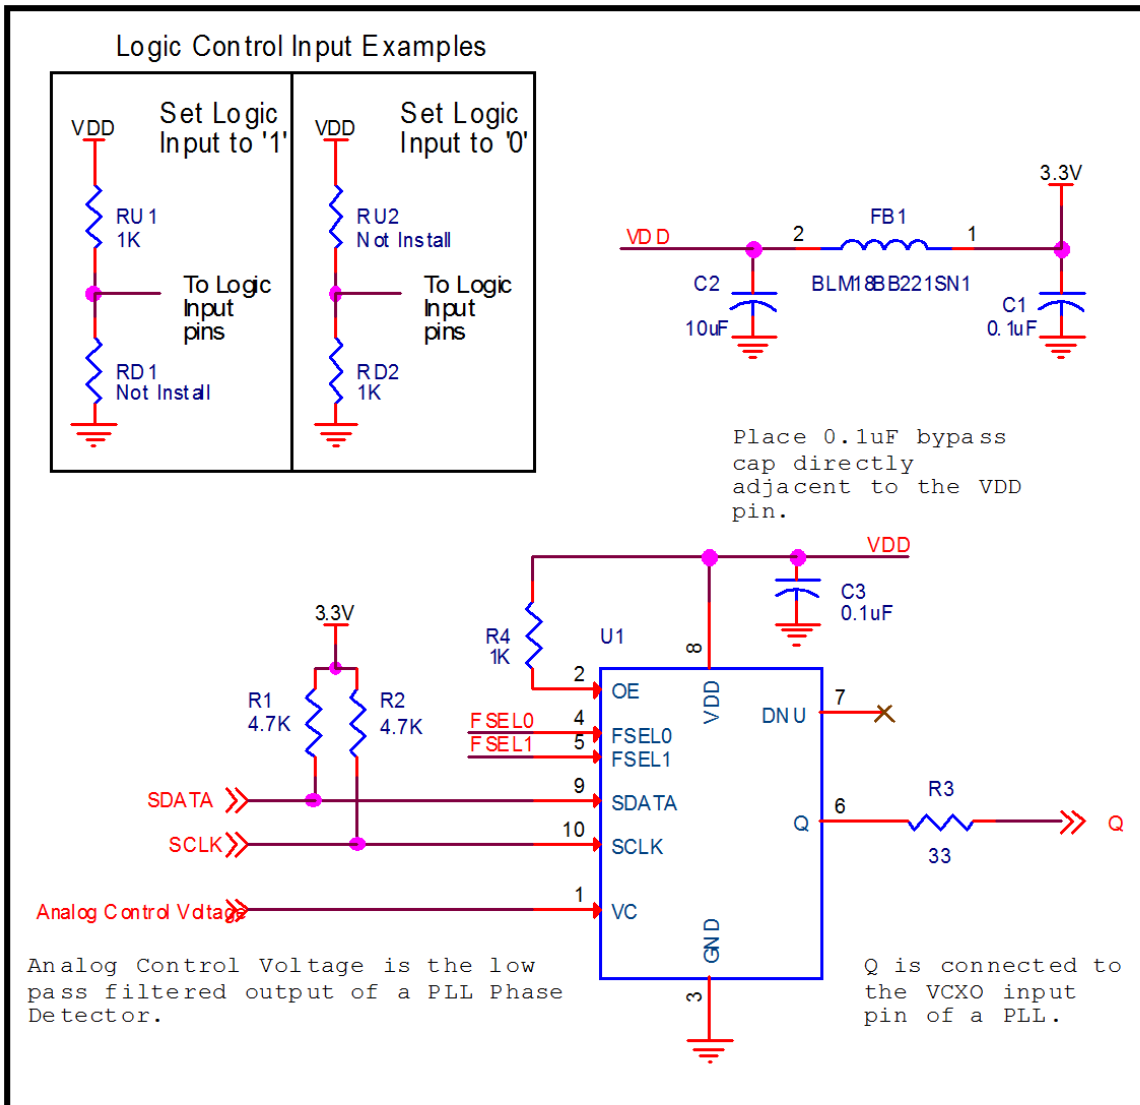

Figure 1. IDT8N0QV01 Schematic Example

Power Considerations

This section provides information on power dissipation and junction temperature for the IDT8N0QV01. Equations and example calculations are also provided.

1. Power Dissipation.

The total power dissipation for the IDT8N0QV01 is the sum of the core power plus the power dissipation in the load(s). The following is the power dissipation for $V_{DD} = 3.3V + 5\% = 3.465V$, which gives worst case results.

- Power (core)_{MAX} = $V_{DD_MAX} * I_{DD} = 3.465V * 150mA = 519.8mW$

Total Static Power:

$$= \text{Power (core)}_{MAX} = 519.8mW$$

Dynamic Power Dissipation at F_{OUT} (max)

$$\text{Total Power (F}_{OUT_MAX}) = [(C_{PD} * N) * \text{Frequency} * (V_{DD})^2] = [(8pF * 1) * 260MHz * (3.465V)^2] = 24.97mW$$

Total Power

$$\begin{aligned} &= \text{Static Power} + \text{Dynamic Power Dissipation} \\ &= 519.8mW + 24.97mW \\ &= 544.77mW \end{aligned}$$

2. Junction Temperature.

Junction temperature, T_j , is the temperature at the junction of the bond wire and bond pad, and directly affects the reliability of the device. The maximum recommended junction temperature is 125°C. Limiting the internal transistor junction temperature, T_j , to 125°C ensures that the bond wire and bond pad temperature remains below 125°C.

The equation for T_j is as follows: $T_j = \theta_{JA} * Pd_total + T_A$

T_j = Junction Temperature

θ_{JA} = Junction-to-Ambient Thermal Resistance

Pd_total = Total Device Power Dissipation (example calculation is in section 1 above)

T_A = Ambient Temperature

In order to calculate junction temperature, the appropriate junction-to-ambient thermal resistance θ_{JA} must be used. Assuming no air flow and a multi-layer board, the appropriate value is 49.4°C/W per Table 7 below.

Therefore, T_j for an ambient temperature of 85°C with all outputs switching is:

$$85^\circ C + 0.545W * 49.4^\circ C/W = 112^\circ C. \text{ This is below the limit of } 125^\circ C.$$

This calculation is only an example. T_j will obviously vary depending on the number of loaded outputs, supply voltage, air flow and the type of board (multi-layer).

Table 7. Thermal Resistance θ_{JA} for a 10-lead Ceramic 5mm x 7mm Package, Forced Convection

Meters per Second	θ_{JA} by Velocity		
	0	1	2.5
Multi-Layer PCB, JEDEC Standard Test Boards	49.4°C/W	44.2°C/W	41.0°C/W

Reliability Information

Revision History Sheet

Rev	Table	Page	Description of Change	Date
A	T1	3	first row: deleted '(see Table 3C).'	3/14/2014
			forth row: replaced description.	
	6A	8	Deleted NOTE 2 from RMS Phase Jitter. Added 'NOTE 2' to 156.25MHz.	
	6B	9	Note 2: Added 'Please refer to the FemtoClock NG Ceramic 5x7 Module Programming Guide document.'	
		14	Power Considerations. Changed Dynamic Power Dissipation from 2.5mW to 24.97mW	

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
 2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
 3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
 4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
 5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
 6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
 7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
 8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
 9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
 10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
 11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
 12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.
- (Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.
- (Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
