

The MPC962309 is a zero delay buffer designed to distribute high-speed clocks. Available in a 16-pin SOIC or TSSOP package, the device accepts one reference input and drives nine low-skew clocks. The MPC962305 is the 8-pin version of the MPC962309 which drives five outputs with one reference input. The -1H versions of these devices have higher drive than the -1 devices and can operate up to 100/-133 MHz frequencies. These parts have on-chip PLLs which lock to an input clock presented on the REF pin. The PLL feedback is on-chip and is obtained from the CLOCKOUT pad.

Features

- 1:5 LVCMOS zero-delay buffer (MPC962305)
- 1:9 LVCMOS zero-delay buffer (MPC962309)
- Zero input-output propagation delay
- Multiple low-skew outputs
- 250 ps max output-output skew
- 700 ps max device-device skew
- Supports a clock I/O frequency range of 10 MHz to 133 MHz, compatible with CPU and PCI bus frequencies
- Low jitter, 200 ps max cycle-cycle, and compatible with Pentium® based systems
- Test Mode to bypass PLL (MPC962309 only. See [Table 3](#))
- 8-pin SOIC or 8-pin TSSOP package (MPC962305); 16-pin SOIC or 16-pin TSSOP package (MPC962309), all Pb-free
- Single 3.3 V supply
- Ambient temperature range: -40°C to +85°C
- Compatible with the CY2305, CY23S05, CY2309, CY23S09
- Spread spectrum compatible
- For drop in replacement for MPC962305 use 2305
- For drop in replacement for MPC962309 use 2309

The MPC962309 has two banks of four outputs each, which can be controlled by the Select Inputs as shown in [Table 3](#). Bank B can be tri-stated if all of the outputs are not required. Select inputs also allow the input clock to be directly applied to the outputs for chip and system testing purposes.

The MPC962305 and MPC962309 PLLs enters a power down state when there are no rising edges on the REF input. During this state, all of the outputs are in tristate, the PLL is turned off, and there is less than 25.0 μA of current draw for the device. The PLL shuts down in one additional case as shown in [Table 3](#).

Multiple MPC962305 and MPC962309 devices can accept the same input clock and distribute it throughout the system. In this situation, the difference between the output skews of two devices will be less than 700 ps.

All outputs have less than 200 ps of cycle-cycle jitter. The input-to-output propagation delay on both devices is guaranteed to be less than 350 ps and the output-to-output skew is guaranteed to be less than 250 ps.

The MPC962305 and MPC962309 are available in two/three different configurations, as shown on the ordering information page. The MPC962305-1/MPC962309-1 are the base parts. High drive versions of those devices, MPC962305-1H and MPC962309-1H, are available to provide faster rise and fall times of the base device.

Pentium II is a trademark of Intel Corporation.

Block Diagram

Pin Configuration

Table 1. Pin Description for MPC962309

Pin	Signal	Description
1	REF ⁽¹⁾	Input reference frequency, 5 V-tolerant input
2	CLKA1 ⁽²⁾	Buffered clock output, Bank A
3	CLKA2 ⁽²⁾	Buffered clock output, Bank A
4	V _{DD}	3.3 V supply
5	GND	Ground
6	CLKB1 ⁽²⁾	Buffered clock output, Bank B
7	CLKB2 ⁽²⁾	Buffered clock output, Bank B
8	S2 ⁽³⁾	Select input, bit 2
9	S1 ⁽³⁾	Select input, bit 1
10	CLKB3 ⁽²⁾	Buffered clock output, Bank B
11	CLKB4 ⁽²⁾	Buffered clock output, Bank B
12	GND	Ground
13	V _{DD}	3.3 V supply
14	CLKA3 ⁽²⁾	Buffered clock output, Bank A
15	CLKA4 ⁽²⁾	Buffered clock output, Bank A
16	CLKOUT ⁽²⁾	Buffered output, internal feedback on this pin

1. Weak pull-down.
2. Weak pull-down on all outputs.
3. Weak pull-ups on these inputs.

Table 2. Pin Description for MPC962305

Pin	Signal	Description
1	REF ⁽¹⁾	Input reference frequency, 5 V-tolerant input
2	CLK2 ⁽²⁾	Buffered clock output
3	CLK1 ⁽²⁾	Buffered clock output
4	GND	Ground
5	CLK3 ⁽²⁾	Buffered clock output
6	V _{DD}	3.3 V supply
7	CLK4 ⁽²⁾	Buffered clock output
8	CLKOUT ⁽²⁾	Buffered clock output, internal feedback on this pin

1. Weak pull-down.
2. Weak pull-down on all outputs.

Table 3. Select Input Decoding for MPC962309

S2	S1	CLOCK A1–A4	CLOCK B1–B4	CLKOUT ⁽¹⁾	Output Source	PLL Shutdown
0	0	Three-State	Three-State	Driven	PLL	N
0	1	Driven	Three-State	Driven	PLL	N
1	0	Driven	Driven	Driven	Reference	Y
1	1	Driven	Driven	Driven	PLL	N

1. This output is driven and has an internal feedback for the PLL. The load on this output can be adjusted to change the skew between the reference and output.

Table 4. Maximum Ratings

Characteristics	Value	Unit
Supply Voltage to Ground Potential	–0.5 to +3.9	V
DC Input Voltage (Except Ref)	–0.5 to $V_{DD}+0.5$	V
DC Input Voltage REF	–0.5 to 5.5	V
Storage Temperature	–65 to +150	°C
Junction Temperature	150	°C
Static Discharge Voltage (per MIL-STD-883, Method 3015)	>2000	V

Table 5. Operating Conditions for MPC962305-X and MPC962309-X Industrial Temperature Devices

Parameter	Description	Min	Max	Unit
V_{DD}	Supply Voltage	3.0	3.6	V
T_A	Operating Temperature (Ambient Temperature)	–40	85	°C
C_L	Load Capacitance, below 100 MHz		30	pF
C_L	Load Capacitance, from 100 MHz to 133 MHz		10	pF
C_{IN}	Input Capacitance		7	pF

Table 6. Electrical Characteristics for MPC962305-X and MPC962309-X Industrial Temperature Devices⁽¹⁾

Parameter	Description	Test Conditions	Min	Max	Unit
V_{IL}	Input LOW Voltage ⁽²⁾			0.8	V
V_{IH}	Input HIGH Voltage ⁽²⁾		2.0		V
I_{IL}	Input LOW Current	$V_{IN} = 0\text{ V}$		50.0	μA
I_{IH}	Input HIGH Current	$V_{IN} = V_{DD}$		100.0	μA
V_{OL}	Output LOW Voltage ⁽³⁾	$I_{OL} = 8\text{ mA (-1)}$ $I_{OH} = 12\text{ mA (-1H)}$		0.4	V
V_{OH}	Output HIGH Voltage ⁽³⁾	$I_{OH} = -8\text{ mA (-1)}$ $I_{OL} = -12\text{ mA (-1H)}$	2.4		V
I_{DD} (PD mode)	Power Down Supply Current	REF = 0 MHz		25.0	μA
I_{DD}	Supply Current	Unloaded outputs at 66.67 MHz, SEL inputs at V_{DD}		35.0	mA

1. All parameters are specified with loaded outputs.
2. REF input has a threshold voltage of $V_{PP}/2$.
3. Parameter is guaranteed by design and characterization. Not 100% tested in production.

Table 7. Switching Characteristics for MPC962305-1 and MPC962309-1 Industrial Temperature Devices⁽¹⁾

Parameter	Name	Test Conditions	Min	Typ	Max	Unit
t ₁	Output Frequency	30-pF load	10		100	MHz
		10-pF load	10		133.33	MHz
	Duty Cycle ⁽²⁾ = t ₂ ÷ t ₁	Measured at 1.4 V, F _{OUT} = 66.67 MHz	40.0	50.0	60.0	%
t ₃	Rise Time ⁽²⁾	Measured between 0.8 V and 2.0 V			2.50	ns
t ₄	Fall Time ⁽²⁾	Measured between 0.8 V and 2.0 V			2.50	ns
t ₅	Output to Output Skew ⁽²⁾	All outputs equally loaded			250	ps
t _{6A}	Delay, REF Rising Edge to CLKOUT Rising Edge ⁽²⁾	Measured at V _{DD} /2		0	±350	ps
t _{6B}	Delay, REF Rising Edge to CLKOUT Rising Edge ⁽²⁾	Measured at V _{DD} /2. Measured in PLL Bypass Mode, MPC962309 device only	1	5	8.7	ns
t ₇	Device to Device Skew ⁽²⁾	Measured at V _{DD} /2 on the CLKOUT pins of devices		0	700	ps
t _J	Cycle to Cycle Jitter ⁽²⁾	Measured at 66.67 MHz, loaded outputs			200	ps
t _{LOCK}	PLL Lock Time ⁽²⁾	Stable power supply, valid clock presented on REF pin			1.0	ms

1. All parameters are specified with loaded outputs.
2. Parameter is guaranteed by design and characterization. Not 100% tested in production.

Table 8. Switching Characteristics for MPC962305-1H and MPC962309-1H Industrial Temperature Devices⁽¹⁾

Parameter	Name	Test Conditions	Min	Typ	Max	Unit
t ₁	Output Frequency	30-pF load	10		100	MHz
		10-pF load	10		133.33	MHz
	Duty Cycle ⁽²⁾ = t ₂ ÷ t ₁	Measured at 1.4 V, F _{OUT} = 66.67 MHz	40.0	50.0	60.0	%
	Duty Cycle ⁽²⁾ = t ₂ ÷ t ₁	Measured at 1.4 V, F _{OUT} < 50 MHz	45.0	55.0	55.0	%
t ₃	Rise Time ⁽²⁾	Measured between 0.8 V and 2.0 V			1.50	ns
t ₄	Fall Time ⁽²⁾	Measured between 0.8 V and 2.0 V			1.50	ns
t ₅	Output to Output Skew ⁽²⁾	All outputs equally loaded			250	ps
t _{6A}	Delay, REF Rising Edge to CLKOUT Rising Edge ⁽²⁾	Measured at V _{DD} /2		0	±350	ps
t _{6B}	Delay, REF Rising Edge to CLKOUT Rising Edge ⁽²⁾	Measured at V _{DD} /2. Measured in PLL Bypass Mode, MPC962309 device only	1	5	8.7	ns
t ₇	Device to Device Skew ⁽²⁾	Measured at V _{DD} /2 on the CLKOUT pins of devices		0	700	ps
t ₈	Output Slew Rate ⁽²⁾	Measured between 0.8 V and 2.0 V using Test Circuit #2	1			V/ns
t _J	Cycle to Cycle Jitter ⁽²⁾	Measured at 66.67 MHz, loaded outputs			200	ps
t _{LOCK}	PLL Lock Time ⁽²⁾	Stable power supply, valid clock presented on REF pin			1.0	ms

1. All parameters are specified with loaded outputs.
2. Parameter is guaranteed by design and characterization. Not 100% tested in production.

APPLICATIONS INFORMATION

The pin-to-pin skew is defined as the worst case difference in propagation delay between any similar delay path within a single device

Figure 1. Output-to-Output Skew $t_{SK(O)}$

Figure 2. Static Phase Offset Test Reference

The time from the PLL controlled edge to the non-controlled edge, divided by the time between PLL controlled edges, expressed as a percentage

Figure 3. Output Duty Cycle (DC)

Figure 4. Device-to-Device Skew

The variation in cycle time of a signal between adjacent cycles, over a random sample of adjacent cycle pairs

Figure 5. Cycle-to-Cycle Jitter

Figure 6. Output Transition Time Test Reference

Test Circuit for all parameters except t_b

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

(Rev.4.0-1 November 2017)
