Relative humidity sensors provide industry-leading accuracy and response times to improve system performance.

**FEATURES**

- Silicon carbide structure
- ±1.5%RH accuracy (HS3001)
- Fast RH response time (Typical 6 seconds)
- 0.1%RH per year drift
- 14-bit resolution: 0.01%RH (Typ.)
- Low power consumption: 1.0µA average
- Digital/Analog output
- Extended supply voltage: 2.3V to 5.5V

IDT’s humidity sensors offer high accuracy with the fastest measurement response time of comparable devices currently on the market.

The HS300x family of relative humidity sensors feature a ±1.5% RH accuracy and six-second response time (rated 20% to 80% RH range in still air and does not require airflow). Since humidity sensors consume the most power when they are taking a measurement, the fast response time to a stable measurement reduces the amount of sampling needed. This is especially important for battery-powered applications, where lower power consumption equates to longer battery life.

In addition to high-accuracy and fast response times, the HS300x family features excellent long-term stability of 0.1% RH per year as a result of a robust silicon carbide construction and an innovative design. This improves useful lifetime and lowers its effective cost.

IDT’s humidity sensors are ideal for a wide range of applications, including measurement of water vapor content in medical oxygen, measurement of humidity in appliances such as refrigerators, as well as monitoring the humidity of air in industrial processes, climate control systems (HVAC), weather stations, and portable personal health devices.
Relative Humidity Sensors

**BENEFITS**

- Integrated temperature and humidity sensing solution
- Small form factor solution with lower system cost
- Low power consumption saves battery
- 14-bit high resolution provides extremely tight accuracy
- Insensitive to environmental contaminants like dirt and dust
- Small size solution saves space & BOM for compact designs
- On board calibration reduces time to market
- Wide supply voltage range eliminates the need for LDO/DC-DC
- Fast RH response time (Typical 6 seconds)

**High-Performance Relative Humidity and Temperature Sensors**
