With more than 20 years of industry experience, IDT is an expert in providing sensor technologies that enable our customers to design and build best-in-class sensor solutions. As we expand the breadth of our sensor technologies, IDT will create unique and differentiated sensor solutions.

- **SensorShare™ Technology**
  Connects IDT’s array of environmental sensor solutions designed to measure, monitor and sense smart devices and industrial end applications

- **Breadth of Experience**
  Bringing decades of knowledge, know-how and data from our technologies today into our solutions of the future

- **Trusted, Reliable Partner**
  A proven supplier who has shipped millions of parts into major consumer and automotive manufacturers

- **Best-in-Class Performance**
  Featuring low-power, high-accuracy solutions meeting ISO 26262, Automotive EMC, and reliability requirements

**Flow Sensors**

**Gas Sensors**

**Position Sensors**
Leveraging more than 10 years of development and use, IDT’s gas sensors are reliable and proven.

**FEATURES AND BENEFITS**
- Reliable gas detection
- High sensitivity to a wide range of gases
- Long lifetime:
  - SGAS707: 3 to 5 years
  - SGAS701/SGAS711: 5+ years
- Minimal response to relative humidity (RH)
- Over a decade of gas sensing experience
- Reduced frequency of calibrations
- Reduced maintenance and overall system
- TVOC <1 to 1000 ppm (SGAS707)

IDT offers innovative, high-performance gas sensors ideal for industrial leak detection and air quality applications. Our industry-leading sensors are based upon a highly reliable ceramic substrate, coupled with advanced nanostructured materials tailored for individual applications.

The SGAS family of gas sensors are capable of accurately detecting a range of gases, including hydrogen, flammable gases (methane, propane, natural gas) and volatile organic compounds (includes TVOC, alcohols, aldehydes, ketones and more).

**Typical Applications**

ZMOD4510 Gas Sensor for Outdoor Air Quality

**FEATURES**

- Reliable detection of outdoor air quality
- Correlates with the Air Quality Index (AQI) by the US Environmental Protection Agency (EPA)
- Software upgradeable
- Proven MOx material with more than 15 years of reliability data
- Electrical and gas calibrated
- Miniature footprint (3 x 3 x 0.7 mm)
- Digital (I2C) output
- Siloxane resistant

**BENEFITS**

- First digital gas sensor module for outdoor air quality to detect ppb levels of nitrogen oxides and ozone
- High sensitivity and long term stability allows <20 ppb detection limits
- Smallest sensor in the market enables reduced end product size
- Allows improved energy efficiency without compromising air quality
- Enables rapid customer integration with easy to use precompiled software
- Pre-calibrated sensors save in production costs

IDT’s ZMOD4510 gas sensor platform is a software-upgradeable digital Outdoor Air Quality (OAQ) sensor module that provides high sensitivity and reliability for detecting total nitrogen oxides (NOx) and ozone (O3) gases, two significant causes of unhealthy outdoor air quality. Because of its outstanding combination of flexibility and small size, it is ideal for a wide variety of industrial and consumer applications.

Implementation of the ZMOD4510 will enable an accurate and local measurement of outdoor air quality, which can be used to provide end users with health-protecting information as well as automate smart buildings for improved air quality and energy efficiency. The ZMOD4510 outdoor air quality sensor can also be combined with the ZMOD4410 Indoor Air Quality (IAQ) sensor to provide a complete understanding of air quality.

The ZMOD4510 is based on proven metal oxide (MOx) material and each sensor is calibrated electrically with gas to ensure consistency from lot to lot, an important advantage for manufacturers with long production runs. ZMOD4510 devices are also highly resistant to siloxanes for superior reliability use in harsh applications.

The ZMOD4510 platform focuses on detection, control, and rating of the OAQ. The OAQ rating is based on the US Environmental Protection Agency (EPA) standards. By detecting ozone and NOx, the ZMOD4510 helps systems address unhealthy air in outdoor environments.
Recomended Applications

- Home & building automation systems, including HVAC systems
- Smart fans and damper applications
- City air monitoring stations
- Personal monitors

Product Support

- Evaluation kits
- Manuals, videos and application notes
- Firmware and programming examples
- Application engineering support for easy sensor implementation

Physical Characteristics

- Power consumption <21 mW in continuous operation
- −40°C to +65°C operating temperature range
- 1.7 to 3.6V supply voltage
- 3.0 x 3.0 x 0.7 mm 12-LGA package

Outdoor Gases Vary with Location

Unhealthy outdoor air comes from automobiles and factories, which can also make its way inside buildings.

The ZMOD4510 OAQ sensors detect parts per billion (ppb) levels of nitrogen oxides and ozone gases and are calibrated to report the EPA’s AQI (for combined O₃ and NOx). By measuring both of these gases together and reporting concentrations relative to this EPA standard, these sensors provide vital information that helps users take control of their health and environment.

ZMOD4410 Metal Oxide Gas Sensor for Indoor Air Quality

IDT’s ZMOD4410 gas sensor platform provides best-in-class stability and sensitivity and is designed to identify trace gases in various locations within indoor environments.

These air quality sensors feature a miniature package, integrated ASIC, and MEMS sensing element that is comprised of a controlled heater and proven metal oxide (MOx) material. Constant temperature operation or a very precisely regulated variation of the heater temperature allows the detection of a wide range of indoor air contaminants by accurately measuring the sensor conductivity and resistance.

This flexibility makes the sensors in the ZMOD4410 platform capable of providing a variety of measurement options by varying the method of operation or changing the firmware used to interpret the resistance measurements. Downloadable libraries and source code provided by IDT make upgrades straightforward to implement. All sensors are electrically and chemically (gas) tested with calibration data stored in the built-in nonvolatile memory (NVM).

The ZMOD4410 platform focuses on detection, control and rating of Indoor Air Quality (IAQ). The indoor air quality rating is based on TVOC concentrations defined by the German Environment Agency (UBA) as the main source for unpleasant air in an indoor environment. By detecting TVOC and rating the IAQ, the ZMOD4410 helps systems address clean air in the ambient environment. Additional downloadable algorithms are available to estimate levels of CO₂ and control ventilation systems.
RECOMMENDED APPLICATIONS

- Monitor home, office and personal environment for healthy conditions and comfort
- Smart appliances that control or monitor indoor air quality
- Automation based on indoor ambient air quality

PRODUCT SUPPORT

- Evaluation kits
- Manuals, videos, application notes and programming examples
- Third-party certification for compliance with standard defined by the German Environment Agency (UBA)
- Engineering support for sensor implementation

PHYSICAL CHARACTERISTICS

- Power consumption <14 mW in continuous operation
- -40°C to +65°C operating temperature range
- 1.7 to 3.6 V supply voltage
- 3.0 x 3.0 x 0.7 mm 12-LGA package

The ZMOD4410 uses the German Environment Agency (UBA) study as a basis to define clean air. Sensors are calibrated to this definition to ensure customer satisfaction.

High-Performance MEMS Flow Sensor Module Family

Our mass flow sensors are ideal for use in the industrial process, healthcare and medical, and automotive markets.

FEATURES AND BENEFITS

- Gas or liquid flow
- MEMS thermopile sensing
- Silicon-carbide coating over MEMS flow sensor
- Robust solid isolation technology
- No cavity in MEMS element to cause clogging
- Resistant to vibration and pressure shock
- High accuracy
- High sensitivity
- Food-grade compatible version
- Easy cleaning and sterilization
- 3 to 5 V DC supply, (5V for FS2012)

IDT mass flow sensor modules measure gas or liquid flow across a sensing surface using the thermo-transfer (calorimetric) principle. The flow sensor utilizes a series of MEMS thermocouples which provides excellent signal-to-noise ratio. The solid thermal isolation of the active MEMS sensing element along with the silicon-carbide film coating offers excellent abrasive wear resistance and long-term reliability.

IDT offers an uncalibrated millivolt output version (FS1012), uncalibrated with amplification circuit (FS102x) and fully-calibrated and linearized (FS2012) modules for either gas or liquid with typical accuracy down to 2% of reading.

Relative humidity sensors provide industry-leading accuracy and response times to improve system performance.

**FEATURES**
- Silicon carbide structure
- ±1.5% RH accuracy (HS3001)
- Fast RH response time (typical 6 seconds)
- 0.1% RH per year drift
- 14-bit resolution: 0.01% RH (typical)
- Low power consumption: 1.0µA average
- Digital/Analog output
- Extended supply voltage: 2.3 to 5.5 V

IDT’s humidity sensors offer high accuracy with the fastest measurement response time of comparable devices currently on the market.

The HS300x family of relative humidity sensors feature a ±1.5% RH accuracy and six-second response time (rated 20% to 80% RH range in still air and does not require airflow). Since humidity sensors consume the most power when they are taking a measurement, the fast response time to a stable measurement reduces the amount of sampling needed.

This is especially important for battery-powered applications where lower power consumption equates to longer battery life. In addition to high-accuracy and fast response times, the HS300x family features excellent long term stability of 0.1% RH per year as a result of a robust silicon carbide construction and an innovative design. This improves useful lifetime and lowers effective cost.

**Typical Applications**

<table>
<thead>
<tr>
<th>Measurement of water vapor content in medical oxygen</th>
</tr>
</thead>
<tbody>
<tr>
<td>Humidity measurement in home appliances</td>
</tr>
<tr>
<td>Monitor humidity in the air in industrial processes, climate control systems (HVAC), weather stations and portable personal health devices</td>
</tr>
</tbody>
</table>
BENEFITS
- Integrated temperature and humidity sensing solution
- Small form factor solution with lower system cost
- Low power consumption saves battery
- 14-bit high resolution provides extremely tight accuracy
- Insensitive to environmental contaminants like dirt and dust
- Small solution size saves space and BOM for compact designs
- On-board calibration reduces time to market
- Wide supply voltage range eliminates the need for LDO/DC-DC
- Fast RH response time (typical 6 seconds)

Sensor Signal Conditioner ICs

SSCs provide performance, test and calibration process advantages for our customers’ sensor modules.

**FEATURES AND BENEFITS**
- Analog and one-wire interface
- Digital I2C & SPI output
- Resistive and capacitive sensor interface
- High analog gain for sophisticated sensors
- Automotive, industrial and consumer applications
- Low-power and battery-powered applications
- Single-pass calibration
- High ADC resolution up to 24 bit
- Wafer and packaged delivery forms

Designing sensor interfaces can be quite challenging and time consuming, and producing them in volume is often expensive due to long test cycles on costly production test equipment. IDT Sensor Signal Conditioner (SSC) ICs facilitate both design and production of sensor interfaces by providing programmable, highly accurate, wide gain and quantization functions combined with powerful, high-order digital correction and linearization algorithms.

IDT is a trusted partner in the sensing market with more than twenty years of experience developing leading-edge core technologies for sensor signal conditioning devices.

IDT’s SSC ICs are all-in-one, energy efficient products that are easy-to-use and are supported by advanced software and expert technical support staff.

Our portfolio offers a broad range of resistive and capacitive SSC ICs. IDT’s highly accurate single-pass calibration operation enables the design of cost-effective, accurate sensing systems.

Connect the IoT Dots

IDT’s ZWIR4512 and ZWIR4532 connectivity modules provide critical and secure 6LoWPAN wireless connectivity to link devices to the Internet of Things (IoT). These modules feature IDT SensorShare™ technology, which connects IDT’s array of environmental sensor solutions designed to measure, monitor and sense smart devices and industrial end applications.

**IDT ADVANTAGES**
- Compatible with all IPv6 standards – Native communication with computers or mobile devices over IPv6
- Lower power – <1μA standby, maximizes battery life
- Small footprint – Compact modules ideal for solutions with size constraints
- FCC and CE certified – Sub-GHz transceiver module is certified for use in North America and Europe
- Standard firmware offering features IDT SensorShare™ firmware, a 6LoWPAN open standard stack, with no associated license fees or royalties
- Mesh routing features – Self-healing ad-hoc mesh network to cover large areas and long ranges
- End-to-end security – Secure communication based on open standard protocols
