

EASE OF USE

- Online configuration tool
- Two week delivery for custom factory programmed samples
- Timing Commander™ software to configure, program, and monitor sophisticated timing devices
- Complete development tool kit with samples

FLEXIBILITY

- I²C configuration for instant customization
- Configurable output types
- One-time programmable (OTP) memory

APPLICATIONS

- Computing
 - Servers
 - PCIe Gen1/2/3, Gen4/5 (non SSC)
 - Embedded systems
 - USB 3.0/Thunderbolt™/RapidIO®
- Consumer
 - Smart devices
 - Set top boxes
- Communications
 - Broadcast video
 - Gigabit ethernet
- Industrial
- Medical
- Automotive

VersaClock Family Overview

IDT's VersaClock® family offers an industry leading portfolio of more than 20 programmable clock generators.

VersaClock devices offer a combination of low power, flexibility and performance for a wide range of applications. These features make them ideal candidates for simplifying system design by replacing multiple discrete timing components and reducing bill of materials (BOM).

The VersaClock product family supports operating voltages from 1.8 to 3.3 V, differential (LVPECL/HCSL/LVDS/LP-HCSL) and LVCMOS output types, up to 3 PLLs and multiple fractional dividers to accurately generate virtually any frequency. Products satisfy system requirements from oscillator replacement to PCIe® Gen1 to Gen5 and to communications applications, while consuming very little power.

Key Specifications	VersaClock 3S	VersaClock 6E
Core Power (mA)	15	30
RMS Phase Jitter (ps) (12k to 20M)	1.5	0.5
Output Frequency Range (Mhz)	1 to 500	0.001 to 350
Architecture	2 Fractional PLL 1 Integer Low Power PLL DCO	1 PLL with 4 Fractional Output Dividers
Package Size	3 x 3 mm 20-QFN 4 x 4 mm 24-QFN	4 x 4 mm 24-LGA 4 x 4 mm 24-QFN 5 x 5 mm 40-QFN 6 x 6 mm 48-QFN
VDD	1.8 2.5 3.3V Supported by different product options	1.8 2.5 3.3V
