General Description
The HXT6204 VCSEL driver array is a key component for compact, robust, low-power optical transmitter modules. In conjunction with the VCSEL array, the chip handles the complete digital-to-optical conversion, including CML input, laser driver, drive control, and supervision. Standard silicon technology and a small number of additional components allow for cost-effective and compact assemblies.

Applications
• InfiniBand EDR transceivers
• InfiniBand EDR active cables
• Proprietary multi-channel optical modules

Device Diagram

Features
• Low power consumption of 150mW per channel while delivering 5mA average and 5mA modulation current
• Compatible with common cathode and isolated VCSEL arrays
• 2-wire interface control and symmetric pad design maximize module design flexibility
• Up to 10 mA Average and 10 mA modulation current
• QSFP MSA compliant
