

General Description

The 932SQ420D is a main clock synthesizer for Romley-generation Intel based server platforms. The 932SQ420D is driven with a 25 MHz crystal for maximum performance. It generates CPU outputs of 100 or 133.33 MHz.

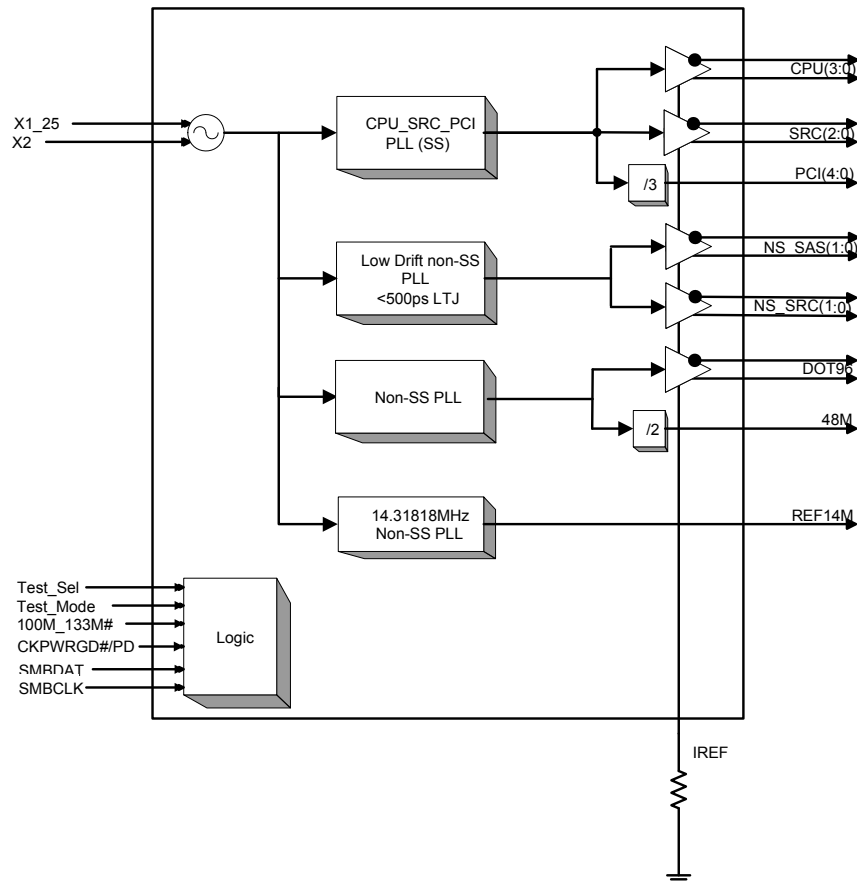

Recommended Application

CK420BQ

Output Features

- 4 - HCSL CPU outputs
- 4 - HCSL Non-Spread SAS/SRC outputs
- 3 - HCSL SRC outputs
- 1 - HCSL DOT96 output
- 1 - 3.3V 48M output
- 5 - 3.3V PCI outputs
- 1- 3.3V REF output

Block Diagram

Features/Benefits

- 0.5% down spread capable on CPU/SRC/PCI outputs/Lower EMI
- 64-pin TSSOP and MLF packages/Space Savings

Key Specifications

- Cycle to cycle jitter: CPU/SRC/NS_SRC/NS_SAS < 50ps.
- Phase jitter: PCIe Gen2 < 3ps rms, Gen3 < 1ps rms
- Phase jitter: QPI 9.6GB/s < 0.2ps rms
- Phase jitter: NS-SAS < 0.4ps rms using raw phase data
- Phase jitter: NS-SAS < 1.3ps rms using Clk Jit Tool 1.6.3

932SQ420 Power Down Functionality

CKPWRGD#/PD	Differential Outputs	Single-ended Outputs	Single ended Outputs w/Latch
1	Hi-Z ¹	Low	Low ²
0	Running		

1. Hi-Z on the differential outputs will result in both True and Complement being low due to the termination network
2. These outputs are Hi-Z after VDD is applied and before the first assertion of CKPWRGD#.

Pin Descriptions - 64 TSSOP

PIN #	PIN NAME	TYPE	DESCRIPTION
1	SMBCLK	IN	Clock pin of SMBUS circuitry, 5V tolerant
2	GND14	PWR	Ground pin for 14MHz output and logic.
3	AVDD14	PWR	Analog power pin for 14MHz PLL
4	VDD14	PWR	Power pin for 14MHz output and logic
5	vREF14_3x/TEST_SEL	I/O	14.318 MHz reference clock. 3X drive strength as default / TEST_SEL latched input to enable test mode. Refer to Test Clarification Table. This pin has a weak (~120Kohm) internal pull down.
6	GND14	PWR	Ground pin for 14MHz output and logic.
7	GNDXTAL	PWR	Ground pin for Crystal Oscillator.
8	X1_25	IN	Crystal input, Nominally 25.00MHz.
9	X2_25	OUT	Crystal output, Nominally 25.00MHz.
10	VDDXTAL	PWR	3.3V power for the crystal oscillator.
11	GNDPCI	PWR	Ground pin for PCI outputs and logic.
12	VDDPCI	PWR	3.3V power for the PCI outputs and logic
13	PCI4_2x	OUT	3.3V PCI clock output
14	PCI3_2x	OUT	3.3V PCI clock output
15	PCI2_2x	OUT	3.3V PCI clock output
16	PCI1_2x	OUT	3.3V PCI clock output
17	PCI0_2x	OUT	3.3V PCI clock output
18	GNDPCI	PWR	Ground pin for PCI outputs and logic.
19	VDDPCI	PWR	3.3V power for the PCI outputs and logic
20	VDD48	PWR	3.3V power for the 48MHz output and logic
21	^48M_2x/100M_133M#	I/O	3.3V 48MHz output/ 3.3V tolerant CPU frequency select latched input pin. See ViIFs and VihFS values for thresholds. This pin has a weak (~120Kohm) internal pull up. 1 = 100MHz, 0 = 133MHz operating frequency
22	GND48	PWR	Ground pin for 48MHz output and logic.
23	GND96	PWR	Ground pin for DOT96 output and logic.
24	DOT96T	OUT	True clock of differential 96MHz output. These are current mode outputs. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
25	DOT96C	OUT	Complementary clock of differential 96MHz output. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
26	AVDD96	PWR	3.3V power for the 48/96MHz PLL and the 96MHz output and logic
27	TEST_MODE	IN	TEST_MODE is a real time input to select between Hi-Z and REF/N divider mode while in test mode. Refer to Test Clarification Table.
28	CKPWRGD#/PD	IN	CKPWRGD# is an active low input used to sample latched inputs and allow the device to Power Up. PD is an asynchronous active high input pin used to put the device into a low power state. The internal clocks and PLLs are stopped.
29	VDDSRC	PWR	3.3V power for the SRC outputs and logic
30	SRC0T	OUT	True clock of differential SRC output. These are current mode outputs. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
31	SRC0C	OUT	Complementary clock of differential SRC output. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
32	GNDSRC	PWR	Ground pin for SRC outputs and logic.
33	SRC1C	OUT	Complementary clock of differential SRC output. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
34	SRC1T	OUT	True clock of differential SRC output. These are current mode outputs. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
35	SRC2C	OUT	Complementary clock of differential SRC output. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
36	SRC2T	OUT	True clock of differential SRC output. These are current mode outputs. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
37	VDDSRC	PWR	3.3V power for the SRC outputs and logic
38	AVDD_SRC	PWR	3.3V power for the SRC PLL analog circuits
39	GNDSRC	PWR	Ground pin for SRC outputs and logic.
40	IREF	OUT	This pin establishes the reference current for the differential current-mode output pairs. This pin requires a fixed precision resistor tied to ground in order to establish the appropriate current. 475 ohms is the standard value.

Pin Descriptions - 64 TSSOP(cont.)

41	NS_SRC0C	OUT	Complementary clock of differential non-spreading SRC output. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
42	NS_SRC0T	OUT	True clock of differential non-spreading SRC output. These are current mode outputs. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
43	NS_SRC1C	OUT	Complementary clock of differential non-spreading SRC output. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
44	NS_SRC1T	OUT	True clock of differential non-spreading SRC output. These are current mode outputs. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
45	VDDNS	PWR	3.3V power for the Non-Spreading differential outputs outputs and logic
46	GNDNS	PWR	Ground pin for non-spreading differential outputs and logic.
47	NS_SAS0C	OUT	Complementary clock of differential non-spreading SAS output. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
48	NS_SAS0T	OUT	True clock of differential non-spreading SAS output. These are current mode outputs. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
49	NS_SAS1C	OUT	Complementary clock of differential non-spreading SAS output. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
50	NS_SAS1T	OUT	True clock of differential non-spreading SAS output. These are current mode outputs. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
51	AVDD_NS_SAS	PWR	3.3V power for the non-spreading SAS/SRC PLL analog circuits.
52	GNDNS	PWR	Ground pin for non-spreading differential outputs and logic.
53	CPU0C	OUT	Complementary clock of differential CPU output. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
54	CPU0T	OUT	True clock of differential CPU output. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
55	CPU1C	OUT	Complementary clock of differential CPU output. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
56	CPU1T	OUT	True clock of differential CPU output. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
57	VDDCPU	PWR	3.3V power for the CPU outputs and logic
58	GNDCPU	PWR	Ground pin for CPU outputs and logic.
59	CPU2C	OUT	Complementary clock of differential CPU output. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
60	CPU2T	OUT	True clock of differential CPU output. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
61	CPU3C	OUT	Complementary clock of differential CPU output. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
62	CPU3T	OUT	True clock of differential CPU output. These are current mode outputs and external 33 ohm series resistors and 49.9 ohm shunt resistors are required for termination.
63	VDDCPU	PWR	3.3V power for the CPU outputs and logic
64	SMBDAT	I/O	Data pin of SMBUS circuitry, 5V tolerant

Pin Configuration - 64 MLF

Electrical Characteristics - Absolute Maximum Ratings

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS	NOTES
3.3V Core Supply Voltage	VDDA				4.6	V	1,2
3.3V Logic Supply Voltage	VDD				4.6	V	1,2
Input Low Voltage	V _{IL}		GND-0.5			V	1
Input High Voltage	V _{IH}	Except for SMBus interface			V _{DD} +0.5V	V	1
Input High Voltage	V _{IHSMB}	SMBus clock and data pins			5.5V	V	1
Storage Temperature	T _s		-65		150	°C	1
Junction Temperature	T _j				125	°C	1
Case Temperature	T _c				110	°C	1
Input ESD protection	ESD prot	Human Body Model	2000			V	1

¹Guaranteed by design and characterization, not 100% tested in production.

²Operation under these conditions is neither implied nor guaranteed.

DC Electrical Characteristics - Differential Current Mode Outputs

T_A = T_{COM}; Supply Voltage VDD = 3.3 V +/-5%

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS	NOTES
Slew rate	dV/dt	Scope averaging on	1	2.4	4	V/ns	1, 2, 3
Slew rate matching	ΔdV/dt	Slew rate matching, Scope averaging on		9	20	%	1, 2, 4
Rise/Fall Time Matching	ΔTrf	Rise/fall matching, Scope averaging off			125	ps	1, 8, 9
Voltage High	V _{High}	Statistical measurement on single-ended signal using oscilloscope math function. (Scope averaging on)	660	772	850	mV	1
Voltage Low	V _{Low}		-150	9	150		1
Max Voltage	V _{max}	Measurement on single ended signal using absolute value.		810	1150	mV	1, 7
Min Voltage	V _{min}		-300	-17			1, 7
Vswing	V _{swing}	Scope averaging off	300	1446		mV	1, 2
Crossing Voltage (abs)	V _{cross_abs}	Scope averaging off	250	351	550	mV	1, 5
Crossing Voltage (var)	Δ-V _{cross}	Scope averaging off		24	140	mV	1, 6

¹Guaranteed by design and characterization, not 100% tested in production. I_{REF} = VDD/(3xR_R). For R_R = 475Ω (1%), I_{REF} =

2.32mA. I_{OH} = 6 x I_{REF} and V_{OH} = 0.7V @ Z_O=50Ω (100Ω differential impedance).

²Measured from differential waveform

³Slew rate is measured through the V_{swing} voltage range centered around differential 0V. This results in a +/-150mV window around differential 0V.

⁴Matching applies to rising edge rate for Clock and falling edge rate for Clock#. It is measured using a +/-75mV window centered on the average cross point where Clock rising meets Clock# falling. The median cross point is used to calculate the voltage thresholds the oscilloscope is to use for the edge rate calculations.

⁵V_{cross} is defined as voltage where Clock = Clock# measured on a component test board and only applies to the differential rising edge (i.e. Clock rising and Clock# falling).

⁶The total variation of all V_{cross} measurements in any particular system. Note that this is a subset of V_{cross_min}/max (V_{cross} absolute) allowed. The intent is to limit V_{cross} induced modulation by setting V_{cross_delta} to be smaller than V_{cross} absolute.

⁷Includes overshoot and undershoot.

⁸Measured from single-ended waveform

⁹Measured with scope averaging off, using statistics function. Variation is difference between min and max.

Electrical Characteristics - Input/Supply/Common Parameters

TA = T_{COM}; Supply Voltage VDD = 3.3 V +/-5%

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS	NOTES

²All Long Term Accuracy specifications are guaranteed with the assumption that the REF output is tuned to exactly 14.31818MHz.

General SMBus Serial Interface Information

How to Write

- Controller (host) sends a start bit
- Controller (host) sends the write address
- IDT clock will **acknowledge**
- Controller (host) sends the beginning byte location = N
- IDT clock will **acknowledge**
- Controller (host) sends the byte count = X
- IDT clock will **acknowledge**
- Controller (host) starts sending Byte N through Byte N+X-1
- IDT clock will **acknowledge** each byte **one at a time**
- Controller (host) sends a Stop bit

Index Block Write Operation		
Controller (Host)		IDT (Slave/Receiver)
T	starT bit	
Slave Address		
WR	WRite	
Beginning Byte = N		ACK
		ACK
Data Byte Count = X		ACK
Beginning Byte N		ACK
O	X Byte	O
O		O
O		O
Byte N + X - 1		ACK
P	stoP bit	

SMBus write address = D2 hex

SMBus read address = D3 hex

How to Read

- Controller (host) will send a start bit
- Controller (host) sends the write address
- IDT clock will **acknowledge**
- Controller (host) sends the beginning byte location = N
- IDT clock will **acknowledge**
- Controller (host) will send a separate start bit
- Controller (host) sends the read address
- IDT clock will **acknowledge**
- IDT clock will send the data byte count = X
- IDT clock sends Byte N+X-1
- IDT clock sends **Byte 0 through Byte X (if X_(H) was written to Byte 8)**
- Controller (host) will need to acknowledge each byte
- Controller (host) will send a not acknowledge bit
- Controller (host) will send a stop bit

Index Block Read Operation		
Controller (Host)		IDT (Slave/Receiver)
T	starT bit	
Slave Address		
WR	WRite	
Beginning Byte = N		ACK
		ACK
RT	Repeat starT	
Slave Address		
RD	ReaD	
		ACK
ACK		
		Data Byte Count=X
		Beginning Byte N
O	X Byte	O
O		O
O		O
O		O
		Byte N + X - 1
N	Not acknowledge	
P	stoP bit

Vcm	0.350 volts	

Test Clarification Table

Comments	HW		SW		OUTPUT
	TEST_SEL HW PIN	TEST_MODE HW PIN	TEST ENTRY BIT B6b6	REF/N or HI-Z B6b7	
	0	X	0	X	NORMAL
Power-up w/ TEST_SEL = 1 (>2.0V) to enter test mode. Cycle power to disable test mode.	1	0	X	0	HI-Z
	1	0	X	1	REF/N
	1	1	X	0	REF/N
	1	1	X	1	REF/N
If TEST_SEL HW pin is 0 during power-up, test mode can be selected through B6b6. If test mode is selected by B6b6, then B6b7 is used to select HI-Z or REF/N. TEST_Mode pin is not used. Cycle power to disable test mode.	0	X	1	0	HI-Z
	0	X	1	1	REF/N

B6b6: 1= ENTER TEST MODE, Default = 0 (NORMAL OPERATION)

B6b7: 1= REF/N, Default = 0 (HI-Z)

Thermal Characteristics

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Units

CORNER LEAD CHAMFER DETAILS

NOTES:

1. DIMENSIONING & TOLERANCING CONFORM TO ASME Y14.5M-1994.
2. ALL DIMENSIONS ARE IN MILLIMETERS. ANGLES ARE IN DEGREES.
3. N IS THE TOTAL NUMBER OF TERMINALS.
4. THE TERMINAL #1 IDENTIFIER AND TERMINAL NUMBERING CONVENTION SHALL CONFORM TO JEDEC PUBLICATION 95 SPP-002. DETAILS OF TERMINAL #1 IDENTIFIER ARE OPTIONAL, BUT MUST BE LOCATED WITHIN THE ZONE INDICATED. THE TERMINAL #1 IDENTIFIER MAY BE EITHER A MOLD OR MARKED FEATURE.
5. DIMENSION b APPLIES TO METALLIZED TERMINAL AND IS MEASURED BETWEEN 0.25mm AND 0.30mm FROM TERMINAL TIP.
6. ND AND NE REFER TO THE NUMBER OF TERMINALS ON EACH D AND E SIDE RESPECTIVELY.
7. DEPOPULATION IS POSSIBLE IN A SYMMETRICAL FASHION.
8. CORNER LEAD CHAMFERS ARE APPLIED TO MAINTAIN MINIMUM CORNER LEAD SPACING (8 PLACES).

Marking Diagram (TSSOP)

Marking Diagram (MLF)

Notes:

1. 'LOT' denotes lot number.
2. 'YYWW' is the date code.
3. 'COO' denotes country of origin.
4. 'L' or 'LF' denotes RoHS compliant package.

Ordering Information

Part / Order Number	Shipping Packaging	Package	Temperature
932SQ420DGLF	Tubes	64-pin TSSOP	0 to +70° C
932SQ420DGLFT	Tape and Reel	64-pin TSSOP	0 to +70° C
932SQ420DKLF	Tray	64-pin MLF	0 to +70° C
932SQ420DKLFT	Tape and Reel	64-pin MLF	0 to +70° C

"LF" suffix to the part number are the Pb-Free configuration, RoHS compliant.

"D" is the device revision designator (will not correlate with the datasheet revision).

While the information presented herein has been checked for both accuracy and reliability, Integrated Device Technology (IDT) assumes no responsibility for either its use or for the infringement of any patents or other rights of third parties, which would result from its use. No other circuits, patents, or licenses are implied. This product is intended for use in normal commercial applications. Any other applications such as those requiring extended temperature range, high reliability, or other extraordinary environmental requirements are not recommended without additional processing by IDT. IDT reserves the right to change any circuitry or specifications without notice. IDT does not authorize or warrant any IDT product for use in life support devices or critical medical instruments.

Revision History

Rev.	Issue Date	Who	Description	Page #
A	9/20/2010	RDW	Minor typo corrections	Various
B	3/1/2011	RDW	Added rise/fall variation to DC Electrical Characteristics Table	9
C	3/9/2011	RDW	Corrected Line 0 of NS_SAS Margining Table.	19
D	4/28/2011	RDW	Corrected MLF packaging pin description. Pin 37 was missing.	7
E	7/26/2011	RDW	Updated Power Down Functionality table to clarify functionality of single-ended outputs in power down.	2
F	9/20/2011	RDW	1. Added "Case Temperature" spec to Abs Max ratings 2. Added Thermal Characteristics	Various
G	12/8/2011	RDW	1. Updated Phase Jitter Table to correct typo in "Conditions" column for SAS. 2. Mark Spec Added.	11, 23, 24
H	4/18/2012	RDW	1. Updated Rp values on Output Terminations Table from 43.2 ohms to 42.2 or 43.2 ohms to be consistent with Intel.	8
J	1/7/2015	DC	1. Updated package drawing and dimensions from PUNCH to SAWN version.	Various

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
